ServiceNow Certified Implementation Specialist - Strategic Portfolio Management Sample Questions (Q69-Q74):

NEW QUESTION # 69

A checklist item record provides a name and what other element?

- A. Complete field.
- B. Percent complete field.
- C. Status field.
- D. Short description field.

Answer: A

Explanation:

A checklist item record provides a name and a complete field. The name field is the label of the checklist item, and the complete field is a checkbox that indicates whether the checklist item is done or not. You can find more information about checklist items in the Product Documentation for ServiceNow.

NEW QUESTION # 70

Is resource capacity derived from FTE or schedules?

- A. Neither.
- B. Both.
- C. Only FTE.
- D. Only Schedules.

Answer: D

Explanation:

Explanation

Resource capacity is the total number of hours that a resource or a group of resources is available for work in a given time period. According to the Product Documentation for ServiceNow, resource capacity is derived from the user or group schedule, which defines the working hours and days for each resource. The group capacity is rolled up from the schedules of all the members. Note: Capacity is not derived from FTE, but from schedules. Both FTE and schedules must be in synchronization with each other. FTE is a measure of how much work a resource can perform in a standard work week, and it is used to calculate the resource demand and allocation.

NEW QUESTION # 71

Which role can configure the parameters of the demand workbench that is provided with the base system?

- A. All roles.
- B. business_stakeholder.
- C. it_pps_admin.
- D. it_project_manager.

Answer: C

Explanation:

Explanation

According to the Demand Workbench document, the role that can configure the parameters of the demand workbench that is provided with the base system is `it_pps_admin`. This role grants access to the Project Portfolio Suite application and allows the user

to configure the demand workbench settings, such as the axes, the quadrants, the bubble size, and the color. The other options are not correct, as they are not roles that can configure the parameters of the demand workbench. The all roles option is too broad and does not specify a particular role. The business_stakeholder role grants access to the Business Stakeholder Portal and allows the user to view and submit demands. The it_project_manager role grants access to the Project Portfolio Management application and allows the user to create and update projects.

NEW QUESTION # 72

Idea [im_idea_core] is directly extended from which table?

- A. Idea Modules
- B. Project
- C. It is not extended from any table
- D. Task

Answer: C

Explanation:

Explanation

According to the ServiceNow documentation¹, the Idea [im_idea_core] table is a base table that is not extended from any other table. It stores information about ideas and their categories. The other options are incorrect because:

Task: The Task table is a base table that is extended by many other tables, such as Project, Demand, Incident, etc².

Idea Modules: The Idea Modules table is a child table of the Idea [im_idea_core] table that defines the idea modules displayed on the Idea Portal³.

Project: The Project table is a child table of the Task table that stores information about projects.

NEW QUESTION # 73

Demand assessments are triggered as soon as the demand enters what state?

- A. Screening.
- B. Submitted.
- C. Qualified.
- D. Approved.

Answer: B

Explanation:

Explanation

According to the Completing Demand Assessments document, demand assessments are triggered as soon as the demand enters the Submitted state. The other options are not correct, as demand assessments are not triggered when the demand is Approved, Screening, or Qualified.

NEW QUESTION # 74
