

2026 Authoritative Latest Fire-Inspector-II Test Question | Fire-Inspector-II 100% Free Books PDF

P.S. Free & New Fire-Inspector-II dumps are available on Google Drive shared by TestValid: <https://drive.google.com/open?id=19IUzyEwBPiMLvb-BYgDtS2lpWKPBoqOV>

As the saying goes, time is the most precious wealth of all wealth. If you abandon the time, the time also abandons you. So it is also vital that we should try our best to save our time, including spend less time on preparing for exam. Our Fire-Inspector-II guide torrent will be the best choice for you to save your time. The three different versions have different functions. If you decide to buy our Fire-Inspector-II Test Guide, the online workers of our company will introduce the different function to you. You will have a deep understanding of the three versions of our Fire-Inspector-II exam questions. We believe that you will like our products.

Our Fire-Inspector-II study materials can help you pass test faster. You can take advantage of the certification. Many people improve their ability to perform more efficiently in their daily work with the help of our Fire-Inspector-II exam questions and you can be as good as they are. The moment you choose to go with our Fire-Inspector-II Study Materials, your dream will be more clearly presented to you. Next, through my introduction, I hope you can have a deeper understanding of our Fire-Inspector-II learning quiz. We really hope that our Fire-Inspector-II study materials will give you the help to pass the exam.

>> Latest Fire-Inspector-II Test Question <<

Fire-Inspector-II Books PDF & Free Fire-Inspector-II Download Pdf

According to different kinds of questionnaires based on study condition among different age groups, we have drawn a conclusion that the majority learners have the same problems to a large extent, that is low-efficiency, low-productivity, and lack of plan and periodicity. As a consequence of these problem, our Fire-Inspector-II test prep is totally designed for these study groups to improve their capability and efficiency when preparing for International Code Council exams, thus inspiring them obtain the targeted Fire-Inspector-II certificate successfully. There are many advantages of our Fire-Inspector-II question torrent that we are happy to introduce you and you can pass the exam for sure.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q81-Q86):

NEW QUESTION # 81

Flammable medical gas supply cylinders located inside of a building must be stored in a separate room of not less than ___ fire-resistive construction when exceeding 200 cu. ft.

- A. 1-hour
- B. 2-hour
- C. 3-hour
- D. 1/2-hour

Answer: B

Explanation:

The storage of flammable medical gas supply cylinders inside a building is regulated by 2021 International Fire Code (IFC) Section 5306 - Medical Gas Systems.

IFC Section 5306.2.1 - Storage of More Than 200 Cubic Feet of Medical Gases:

When the quantity of flammable medical gas exceeds 200 cubic feet, it must be stored in a separate room with a minimum 2-hour fire-resistance rating.

The room must also comply with ventilation and explosion control requirements per NFPA 99 (Healthcare Facilities Code).

Why Other Options Are Incorrect?

A: 1/2-hour - Insufficient fire resistance for high-risk gas storage.

B: 1-hour - Does not meet the minimum 2-hour requirement set by the IFC.

D: 3-hour - Exceeds the minimum required by code; the correct requirement is 2-hour fire-resistive construction.

NEW QUESTION # 82

Given: A health club contains a 1,000-sq. ft. exercise room.

Based on the square footage, what is the calculated occupant load allowed for this exercise room?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

The occupant load of a space is determined using the 2021 International Building Code (IBC), Table 1004.5 - Maximum Floor Area Per Occupant.

IBC Table 1004.5 - Occupant Load Factor for Exercise Rooms:

The occupant load factor for an exercise room is 1 person per 20 square feet.

Given that the exercise room is 1,000 sq. ft.:

$1,000 \text{ sq. ft.} \div 20 \text{ sq. ft. per person} = 50 \text{ occupants}$

Why Other Options Are Incorrect?

A: 10 - Would require a 100 sq. ft. per person load factor, which is not applicable for exercise rooms.

B: 20 - Incorrect calculation; using the correct load factor, the actual number is 50.

C: 30 - Also incorrect based on the proper load factor.

NEW QUESTION # 83

When more than 500 chairs are used for an assembly event held in a gymnasium, they must be secured to the floor or:

- A. be fastened together in groups of not less than 10.
- B. be spaced at least 6 in. apart.
- C. be fastened together in groups of not less than 3.
- D. be fastened together in groups of not less than 6.

Answer: C

Explanation:

Seating Arrangements for Large Assembly Events

According to the International Fire Code (IFC) 2021, Section 1029.14, when more than 500 chairs are used for an assembly event held in a gymnasium (or similar venue), they must be either:

Secured to the floor OR

Fastened together in groups of at least three (3) chairs.

2. Why Groups of 3 is the Correct Answer

This requirement ensures organized seating, preventing chairs from shifting or obstructing aisles during emergencies.

Properly fastened chairs reduce the risk of crowd-related hazards, ensuring safe and efficient evacuation if needed.

3. Verification of Other Options

Option A (spaced at least 6 inches apart) - Incorrect, as the IFC requires chairs to be fastened together or secured when over 500 are used.

Option C (groups of not less than 6) - Incorrect, as the minimum required grouping is 3.

Option D (groups of not less than 10) - Incorrect, as the IFC does not mandate groups of 10.

NEW QUESTION # 84

Quantities of flammable liquid storage in a control area of an Industrial Occupancy may be doubled when:

- A. permission is granted by the chief.
- B. the control area exceeds 50,000 sq. ft.
- C. the control area is provided with exhaust ventilation in accordance with fire code requirements.
- **D. the building is protected with automatic sprinklers.**

Answer: D

Explanation:

Flammable Liquid Storage Limits in Control Areas

According to the International Fire Code (IFC) 2021, Section 5003.1.1 and Table 5003.1.1(1), the allowable quantity of flammable liquids stored in a control area can be doubled if the building is equipped with an automatic sprinkler system that complies with NFPA 13.

2. Why Automatic Sprinklers Allow Increased Storage

A sprinkler system significantly reduces fire risk by suppressing flames early, thus allowing greater quantities of hazardous materials to be safely stored.

IFC and NFPA 30 (Flammable and Combustible Liquids Code) specify that sprinkler-protected buildings can have up to twice the standard storage limits.

3. Verification of Other Options

Option A (permission is granted by the chief) - Incorrect, as storage limits are regulated by the fire code, not discretionary approval from the fire chief.

Option B (the control area exceeds 50,000 sq. ft.) - Incorrect, as floor area does not automatically allow for increased storage unless fire protection systems are in place.

Option D (the control area is provided with exhaust ventilation) - Incorrect, because ventilation is required for hazardous material control but does not impact storage limits like sprinklers do.

Reference Sources:

International Fire Code (IFC) 2021 - Section 5003.1.1 & Table 5003.1.1(1) (Control Area Storage Limits for Flammable Liquids)
NFPA 30: Flammable and Combustible Liquids Code (Sprinkler-Adjusted Storage Quantities) ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: C. the building is protected with automatic sprinklers. # Reference: IFC 2021, Table 5003.1.1(1), Section 5003.8.3.5.

NEW QUESTION # 85

The minimum working space width for a 66-in. wide electrical equipment panel shall be in

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Minimum Working Space Width for Electrical Equipment Panels

According to National Electrical Code (NEC) 110.26(A)(2) and International Fire Code (IFC) 2021, Section 604.3, the minimum working space width for electrical equipment must be at least the width of the equipment or 30 inches, whichever is greater.

Since the equipment panel in the question is 66 inches wide, the required working space width must be at least 66 inches.

2. Why 66 Inches is the Correct Answer

The minimum clearance width must be equal to the width of the electrical equipment if the panel itself is wider than 30 inches. This ensures safe maintenance and emergency access to electrical components.

3. Verification of Other Options

Option A (30 inches) - Incorrect, because the equipment is wider than 30 inches, requiring a larger clearance.

Option B (36 inches) - Incorrect, as this is not the requirement for a 66-inch-wide panel.

Option D (78 inches) - Incorrect, as the clearance does not need to exceed the width of the panel.

Reference Sources:

National Electrical Code (NEC) 2023 - Section 110.26(A)(2) (Working Space Width Requirements) International Fire Code (IFC) 2021 - Section 604.3 (Electrical Equipment Clearance Requirements) ICC Fire Inspector II Study Guide (2021)

NEW QUESTION # 86

.....

The sources and content of our Fire-Inspector-II practice dumps are all based on the real Fire-Inspector-II exam. And they are the masterpieces of professional expertise these area with reasonable prices. Besides, they are high efficient for passing rate is between 98 to 100 percent, so they can help you save time and cut down additional time to focus on the Fire-Inspector-II Actual Exam review only. We understand your drive of the certificate, so you have a focus already and that is a good start.
