## 最新的 F5-CA F5CAB4 免費考試真題 (Q49-Q54):

### 問題 #49

The BIG-IP Administrator suspects unauthorized SSH login attempts on the BIG-IP system.  
Which log file would contain details of these attempts? (Choose one answer)

- A. /var/log/secure
- B. /var/log/audit
- C. /var/log/ltn
- D. /var/log/messages

答案： A

解題說明：

On BIG-IP systems, authentication and authorization events are logged in /var/log/secure. This includes:

- \* Successful and failed SSH login attempts
- \* Invalid user authentication attempts
- \* PAM (Pluggable Authentication Module) authentication failures
- \* Access denials related to secure services

Why the other options are incorrect:

- \* /var/log/messages contains general system messages and service events, not detailed authentication failures.
- \* /var/log/audit records administrative configuration changes (who changed what and when), not login attempts.
- \* /var/log/ltn logs traffic-management (TMM) and application-related events.

Therefore, the correct log file for investigating unauthorized SSH login attempts is /var/log/secure.

問題 #50

A BIG-IP device sends out the following SNMP trap: big-ipo.f5.com - bigipExternalLinkChange Link: 1.0 is DOWN. Where in the BIG-IP Configuration utility should the BIG-IP Administrator verify the current status of Link 1.0?

- A. System > Platform
- **B. Network > Interfaces > Interface List**
- C. Statistics > Performance > System
- D. Network > Trunks > Trunk List

答案： B

解題說明：

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Monitoring the physical status of the device is critical for reporting device health. In F5 nomenclature, "1.0", "1.1", etc., represent physical hardware interfaces. To verify if a physical link is up or down as reported by the Control Plane's SNMP agent, the administrator must check the Interface List located under Network > Interfaces

問題 #51

A BIG-IP Administrator needs to restore a UCS file to an F5 device using the Configuration Utility. Which section of the Configuration Utility should the BIG-IP Administrator access to perform this task?

- A. Local Traffic > Virtual Servers
- B. System > Configuration
- **C. System > Archives**
- D. Local Traffic > Policies

答案： C

解題說明：

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Managing the state of a device often involves restoring configuration backups known as User Configuration Set (UCS) files. These archives contain the full system configuration, including licenses and SSL certificates. The Control Plane provides a dedicated management area for these files under System > Archives, where administrators can upload, create, and restore configuration snapshots

問題 #52

In which of the following log files would log events pertaining to pool members being marked "UP" or "DOWN" by their Health Monitors be written? (Choose one answer)

- A. /var/log/monitors
- **B. /var/log/ltn**
- C. /var/log/secure
- D. /var/log/audit

答案： B

解題說明:

On BIG-IP systems, Local Traffic Manager (LTM) is responsible for:

- \* Pool and pool member management
- \* Health monitor execution
- \* Marking pool members UP or DOWN based on monitor results

Events related to health monitor status changes, including when pool members transition between UP and DOWN, are logged in /var/log/ltn.

Why the other options are incorrect:

- \* /var/log/audit records administrative configuration changes, not runtime health status.
- \* /var/log/secure logs authentication and authorization events.
- \* /var/log/monitors is not a standard BIG-IP log file.

Therefore, the correct log file for pool member health monitor status events is /var/log/ltn.

### 問題 #53

The BIG-IP system is provisioned for LTM only. The BIG-IP Administrator is tasked with provisioning ASM. What process restarts when the BIG-IP Administrator changes the module provisioning? (Choose one answer)

- A. tmm
- B. sshd
- C. httpd
- D. bd

答案: A

解題說明:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

When a BIG-IP Administrator changes module provisioning (for example, enabling ASM on a system previously provisioned only for LTM), the BIG-IP system must restart the Traffic Management Microkernel (TMM) process.

The TMM process is responsible for:

Traffic handling

LTM, ASM, and other traffic-processing modules

Enforcing security and application policies

Provisioning changes affect how traffic modules are loaded and integrated into TMM. As a result, TMM is restarted, which causes a temporary interruption of traffic processing. This is expected behavior and is why module provisioning changes should be planned during a maintenance window.

Why the other options are incorrect:

- A . bd is related to blade/platform management, not module provisioning.
- C . sshd handles SSH access and is not affected by provisioning changes.
- D . httpd supports the Configuration Utility (GUI) and does not restart due to module provisioning.

Therefore, the correct answer is B. tmm.
