

# Integration-Architect Excellect Pass Rate - Integration-Architect Valid Test Discount

BONUS!!! Download part of ValidExam Integration-Architect dumps for free: [https://drive.google.com/open?id=1XvQ8ZCj0aMZO83z\\_tQ5ja8I8YmpqdQT8](https://drive.google.com/open?id=1XvQ8ZCj0aMZO83z_tQ5ja8I8YmpqdQT8)

Our Integration-Architect practice engine is admired by all our customers for our experts' familiarity and dedication with the industry all these years. By their help, you can qualify yourself with high-quality Integration-Architect exam materials. Our experts pass onto the exam candidate their know-how of coping with the exam by our Integration-Architect Training Questions. And i can say that our Integration-Architect study guide is the unique on the market for its high-effective.

Salesforce Integration-Architect certification is a highly sought-after credential in the Salesforce ecosystem. Salesforce Certified Integration Architect certification is specifically designed for professionals who specialize in designing and implementing complex integrations between Salesforce and other systems. The Salesforce Integration-Architect Certification is also known as the Salesforce Certified Integration Architect certification.

## Integration-Architect Valid Test Discount & Latest Integration-Architect Test Vce

Are you a new comer in your company and eager to make yourself outstanding? Our Integration-Architect exam materials can help you. After a few days' studying and practicing with our products you will easily pass the Integration-Architect examination. God helps those who help themselves. If you choose our Integration-Architect Study Guide, you will find God just by your side. The only thing you have to do is just to make your choice and study. Isn't it very easy? So know more about our Integration-Architect practice engine right now!

Salesforce Integration-Architect (Salesforce Certified Integration Architect) Certification Exam is a certification that demonstrates a professional's expertise in integrating Salesforce with other systems. Integration-Architect exam is designed to test an individual's knowledge and skills in designing and implementing complex integration solutions that connect Salesforce with other applications, systems, databases, and technologies.

## Salesforce Certified Integration Architect Sample Questions (Q12-Q17):

### NEW QUESTION # 12

A company in a heavily regulated industry requires data in legacy systems to be displayed in Salesforce user interfaces (UIs). They are proficient in their cloud-based ETL (extract, transform, load) tools. They expose APIs built on their on-premise middleware to cloud and on-premise applications.

Which two findings about their current state will allow copies of legacy data in Salesforce?

Choose 2 answers

- A. Cloud-based ETL can access Salesforce and supports queues.
- B. Only on-premise systems are allowed access to legacy systems.
- C. On-premise middleware provides APIs to legacy systems data.

- D. Legacy systems can use queues for on-premise integration.

**Answer: A,C**

### NEW QUESTION # 13

An organization needs to integrate Salesforce with an external system and is considering authentication options. The organization already has implemented SAML, using a third-party Identity Provider for integrations between other systems.

Which use case can leverage the existing SAML integration to connect Salesforce with other internal systems?

- A. Make an API inbound integration from an external Java client more secure.
- B. Make Apex SOAP outbound integrations to external web services more secure.
- **C. Make formula fields with HYPERLINK() to external web servers more secure.**
- D. A Make Apex REST outbound integrations to external web services more secure.

**Answer: C**

### NEW QUESTION # 14

An architect recommended using Apex code to make callouts to an external system to process insurance quote.

What should the integration architect consider to make sure this is the right option for the integration?

- A. The maximum number of parallel Apex callouts in a single continuation.
- B. The limit of pending operations in the same transaction.
- **C. The maximum callouts in a single Apex transaction.**
- D. The limit on long-running requests (total execution time).

**Answer: C**

Explanation:

Explanation

The maximum callouts in a single Apex transaction is one of the factors that should be considered when choosing Apex code to make callouts to an external system. The limit is 100 callouts per transaction, and if this limit is exceeded, a `LimitException` is thrown. Therefore, the integration architect should evaluate the expected volume and frequency of the callouts and design the solution accordingly. References: Salesforce API Limits and Usage

### NEW QUESTION # 15

Customer is evaluating Platform Events solution and would like help in comparing/contrasting it with Outbound Message for a real-time / near-real time needs. They expect 3,000 consumers of messages from Salesforce.

Which three considerations should be evaluated and highlighted when deciding between the solutions?

Choose 3 answers

- **A. Number of concurrent subscribers to Platform Events is capped at 2,000. An Outbound Message configuration can pass only 100 notifications in a single message to a SOAP end point.**
- **B. In both Platform Events and Outbound Messages, the event messages are retried by and delivered in sequence, and only once. Salesforce ensures there is no duplicate message delivery.**
- C. Both Platform Events and Outbound Message offer declarative means for asynchronous near-real time needs. They aren't best suited for real-time integrations.
- D. Message sequence is possible in Outbound Message but not guaranteed with Platform Events. Both offer very high reliability. Fault handling and recovery are fully handled by Salesforce.
- **E. Both Platform Events and Outbound Message are highly scalable. However, unlike Outbound Message, only Platform Events have Event Delivery and Event Publishing limits to be considered.**

**Answer: A,B,E**

Explanation:

Explanation

Both Platform Events and Outbound Message offer declarative means for asynchronous near-real time needs.

They aren't best suited for real-time integrations (A). In both Platform Events and Outbound Messages, the event messages are retried by and delivered in sequence, and only once. Salesforce ensures there is no duplicate message delivery (B). Message

sequence is possible in Outbound Message but not guaranteed with Platform Events. Both offer very high reliability. Fault handling and recovery are fully handled by Salesforce

Number of concurrent subscribers to Platform Events is capped at 2,000. An Outbound Message configuration can pass only 100 notifications in a single message to a SOAP end point (D). Both Platform Events and Outbound Message are highly scalable.

However, unlike Outbound Message, only Platform Events have Event Delivery and Event Publishing limits to be considered (E).

### NEW QUESTION # 16

Northern Trail Outfitters' ERP is integrated with Salesforce and syncs several million contacts per day.

To prevent specific data from syncing, the integration uses a SOQL query filtered by sharing hierarchy.

Which two things should an architect do to improve the performance of the integration?

Choose 2 answers

- A. Remove the query filters.
- **B. Remove the sharing restrictions.**
- C. Include non-selective criteria in query filters.
- **D. Include selective criteria in query filters.**

**Answer: B,D**

Explanation:

Option C is correct because including selective criteria in query filters can improve the performance of the integration. Selective criteria are filters that reduce the number of records that need to be scanned by the query optimizer, such as indexed fields, standard indexes, or custom indexes. Selective criteria can help the query run faster and avoid hitting the query timeout limit or the query row limit.

Option D is correct because removing the sharing restrictions can improve the performance of the integration.

Sharing restrictions are filters that limit the access to records based on the user's role, profile, or sharing rules.

Sharing restrictions can add complexity and overhead to the query execution, as they require additional joins and calculations.

Removing the sharing restrictions can simplify the query and reduce the number of records that need to be processed.

Option A is incorrect because including non-selective criteria in query filters can degrade the performance of the integration. Non-selective criteria are filters that do not reduce the number of records that need to be scanned by the query optimizer, such as non-indexed fields, formula fields, or OR conditions. Non-selective criteria can cause the query to run slower and hit the query timeout limit or the query row limit.

Option B is incorrect because removing the query filters can degrade the performance of the integration.

Query filters are conditions that specify which records to retrieve from the database, such as WHERE clauses or LIMIT clauses.

Query filters can help the query run faster and avoid retrieving unnecessary or unwanted data. Removing the query filters can increase the number of records that need to be processed and transmitted by the integration.
