

分享最新版本的CWAP-405題庫 -免費下載Certified Wireless Analysis Professional - CWAP-405擬真試題

P.S. NewDumps在Google Drive上分享了免費的、最新的CWAP-405考試題庫：<https://drive.google.com/open?id=13Ap-KMUx0i-6kJ4y7jfS1pKHp6rUyYQI>

在真實的生命裏，每樁偉業都有信心開始，並由信心跨出第一步。當你懷疑自己的知識水準，而在考試之前惡補時，你是否想到如何能讓自己信心百倍的通過這次CWNP的CWAP-405考試認證，不要著急，NewDumps就是唯一能让你通過考試的培訓資料網站，它的培訓資料包括試題及答案，它的通過率100%，有了NewDumps CWNP的CWAP-405考試培訓資料，你就可以跨出你的第一步，等到考試後獲得認證，你職業生涯的輝煌時期將要開始了。

NewDumps是一個為CWNP人士參加相關認證考試提供資源的便利網站。NewDumps針對不同的考生有不同的培訓方法和不同的培訓課程。有了NewDumps提供的這些針對性的培訓，考生通過CWAP-405相關考試就容易得多。很多曾經參加CWAP-405專業相關認證考試的人都是通過我們的NewDumps提供的測試練習題和答案考過的，因此NewDumps在CWNP行業中得到了很高的聲譽。

CWAP-405熱門認證，CWAP-405考試題庫

我相信不論在哪個行業工作的人都希望自己有很好的職業前景。當然在競爭激烈的IT行業裏面也不例外。在IT行業中工作的專業人士也希望自己有個很好的提升機會和很大的提升空間。很多專業的IT人士都知道CWNP CWAP-405 認證考試可以幫你滿足這些願望的。而NewDumps是一個能幫助你成功通過CWNP CWAP-405 的網站。

最新的 CWAP Wi-Fi Analysis CWAP-405 免費考試真題 (Q106-Q111):

問題 #106

Which one of the statements regarding the Frame Control field in an 802.11 MAC header is true?

- A. Only Control frames have a Frame Control field
- **B. The Frame Control field contains subfields, and some 1-bit flags**
- C. The Frame Control field is used to communicate the duration value
- D. The Frame Control field is always set to 0

答案: B

解題說明:

The statement that the Frame Control field contains subfields, and some 1-bit flags is true. The Frame Control field is a 2-byte field in the MAC header that contains information about the type, subtype, and characteristics of a frame. The Frame Control field is divided into several subfields, each with a specific function and length.

Some of these subfields are 1-bit flags, which can be set to 0 or 1 to indicate a certain condition or status. For example, the To DS and From DS subfields are 1-bit flags that indicate whether a frame is destined for or originated from the DS (Distribution System). The other statements are not true, as they do not describe the Frame Control field correctly. All types of frames (management, control, and data) have a Frame Control field, not just control frames. The Frame Control field is not used to communicate the duration value, which is a separate field in the MAC header. The Frame Control field is not always set to 0, as it varies depending on the type, subtype, and characteristics of each frame. References: [Wireless Analysis Professional Study Guide CWAP-405], Chapter 5: 802.11 MAC Sublayer, page 113-114

問題 #107

During a VHT Transmit Beamforming sounding exchange, the beamformee transmits a Compressed Beamforming frame to the beamformer. What is communicated within this Compressed Beamforming frame?

- A. Beamforming Matrix
- **B. Feedback Matrix**
- C. Beamformee Matrix
- D. Steering Matrix

答案: B

解題說明:

The beamformee transmits a Feedback Matrix within the Compressed Beamforming frame to the beamformer.

The Feedback Matrix contains information about the channel state between the beamformee and each spatial stream of the beamformer. This information is used by the beamformer to adjust its transmit weights and optimize its signal for the beamformee³⁴. References: CWAP-405 Certified Wireless Analysis Professional Study and Reference Guide, Chapter 11: 802.11n/ac/ax PHYsical Layer Frame Exchanges, page 4033; CWAP-405 Certified Wireless Analysis Professional Study and Reference Guide, Chapter 11: 802.11n/ac/ax PHYsical Layer Frame Exchanges, page 4064.

問題 #108

You are troubleshooting a client that is experiencing slow WLAN performance. As part of the troubleshooting activity, you start a packet capture on your laptop close to the client device. While analyzing the packets, you suspect that you have not captured all packets transmitted by the client. By analyzing the trace file, how can you confirm if you have missing packets?

- A. Retransmission are an indication of missing packets
- B. The missing packets will be shown as CRC errored packets
- C. Protocol Analyzers show the number of missing packets in their statistics view
- **D. Look for gaps in the sequence number in MAC headers.**

答案: D

解題說明:

One way to confirm if you have missing packets in your packet capture is to look for gaps in the sequence number in MAC headers. The sequence number is a 12-bit field in the MAC header that is used to identify and order data frames within a traffic stream. The sequence number is incremented by one for each new data frame transmitted by a STA, except for retransmissions, fragments, and control frames. The sequence number can range from 0 to 4095, and then wraps around to 0. If you see a jump or a gap in the sequence number between two consecutive data frames from the same STA, it means that you have missed some packets in

between. The other options are not correct, as they do not confirm if you have missing packets in your packet capture. CRC errored packets are packets that have been corrupted during transmission and have failed the error detection check. Protocol analyzers may show the number of CRC errored packets in their statistics view, but not the number of missing packets. Retransmissions are an indication of packet loss or collision, but not necessarily of missing packets in your capture. 問題 #109

The PHY layer provides framing by adding a header to create what type of data unit?

- A. MPDU
- **B. PPDU**
- C. PSDU
- D. MSDU

答案： B

解題說明：

The PHY layer provides framing by adding a header to create a PPDU. A PPDU (PHY Protocol Data Unit) is the data unit that is transmitted or received over the wireless medium by the PHY layer. A PPDU consists of a PSDU (PHY Service Data Unit) and a PHY header, which contains information such as modulation, coding, and data rate. The PHY layer adds the PHY header to the PSDU to create a PPDU for transmission, or removes the PHY header from the PPDU to extract the PSDU for reception. The other options are not correct, as they are not created by adding a header at the PHY layer. An MPDU (MAC Protocol Data Unit) is created by adding a MAC header and FCS to an MSDU (MAC Service Data Unit) at the MAC layer. An MSDU is the data unit that is passed from the LLC sublayer to the MAC sublayer or vice versa. References: [Wireless Analysis Professional Study Guide CWAP-405], Chapter 4: 802.11 Physical Layer, page 97-98

問題 #110

What is used to respond with an uplink transmission to an MU-RTS trigger frame in the 802.11ax PHY?

- A. VHT PPDU
- **B. HE TB PPDU**
- C. HE SU PPDU
- D. HE MU PPDU

答案： B

解題說明：

An HE TB PPDU (High Efficiency Trigger-Based Packet Data Unit) is used to respond with an uplink transmission to an MU-RTS trigger frame in the 802.11ax PHY (Physical Layer). An MU-RTS trigger frame is a frame that initiates a multi-user transmission opportunity (MU-TXOP) by requesting multiple stations (STAs) to send clear-to-send (CTS) frames on different spatial streams or resource units (RUs). An HE TB PPDU is a frame that contains data from multiple STAs that have been allocated RUs by an MU-RTS trigger frame or another type of trigger frame. An HE SU PPDU (High Efficiency Single User Packet Data Unit) is a frame that contains data from a single STA using all available spatial streams or RUs. An HE MU PPDU (High Efficiency Multi User Packet Data Unit) is a frame that contains data from multiple STAs using different spatial streams or RUs without being triggered by another frame. A VHT PPDU (Very High Throughput Packet Data Unit) is a frame that uses the 802.11ac PHY and does not support multi-user transmissions.
