

Pass Guaranteed Quiz 2026 GIAC GICSP: Global Industrial Cyber Security Professional (GICSP) High Hit-Rate Valid Test Pass4sure

To assimilate those useful knowledge better, many customers eager to have some kinds of practice materials worth practicing. All content is clear and easily understood in our GICSP practice materials. They are accessible with reasonable prices and various versions for your option. All content are in compliance with regulations of the exam. As long as you are determined to succeed, our GICSP Study Guide will be your best reliance

Demos of GICSP PDF and practice tests are free to download for you to validate the GIAC GICSP practice material before actually buying the GIAC GICSP product. Trying a free demo of GIAC GICSP questions will ease your mind while purchasing the product.

GIAC GICSP Exam Questions With Free Updates At 25% Discount

As long as you are determined to change your current condition, nothing can stop you. Once you get the GICSP certificate, all things around you will turn positive changes. Never give up yourself. You have the right to own a bright future. And our GICSP exam materials are the right way to help you get what you want with ease. As the most popular study questions in the market, our GICSP Practice Guide wins a good reputation for the high pass rate as 98% to 100%. Once you it, you will pass for sure.

GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q51-Q56):

NEW QUESTION # 51

Which of the following is a facilitated tabletop exercise that is run in odd years and provides an overall public Lessons Learned report each year it is run?

- A. CTEP
- B. CRPA
- C. E-ISAC
- D. GridEx**

Answer: D

Explanation:

GridEx (C) is a major, biennial cybersecurity exercise coordinated by the North American Electric Reliability Corporation (NERC) and other stakeholders. It typically occurs in odd years and involves multiple entities from across the grid, simulating large-scale cyber and physical attacks.

GridEx exercises culminate in a public Lessons Learned report to improve preparedness.

CRPA (A) and CTEP (D) are different programs/exercises, and E-ISAC (B) is the Electricity Information Sharing and Analysis

Center, not an exercise.

GICSP recognizes GridEx as a critical event for testing incident response capabilities in ICS sectors.

NEW QUESTION # 52

Which type of process is described below?

The Station A stamping machine receives 250 Kg of rolled stock from Roller Station B, which it stamps into bearings.

- A. Discrete
- B. Continuous
- C. Batch
- D. Distributed

Answer: A

Explanation:

The process described involves transforming raw rolled stock into discrete products-bearings-by stamping them at Station A. This is characteristic of a discrete process (D), where distinct, countable items are produced (bearings), typically involving individual units or assemblies.

Batch processes (C) involve processing material in defined lots or batches, but the emphasis here is on individual item production. Continuous processes (B) run nonstop with materials continuously flowing, common in chemical plants but not in stamping. Distributed (A) refers to control architecture rather than process type.

GICSP defines discrete manufacturing processes as producing distinct items, requiring specific cybersecurity considerations around control logic and equipment.

NEW QUESTION # 53

A plant is being retrofitted with new cyber security devices in Purdue Level 3. What should the network security architect suggest for the installation?

- A. Move the cyber security devices to a DMZ
- B. Place the cyber security devices on their own subnet
- C. Add a firewall to segregate the cyber security devices

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Purdue Level 3, which typically houses operations management systems and network devices, best practices for retrofitting security devices include placing those devices on their own subnet (B). This segmentation:

Limits broadcast domains and reduces unnecessary traffic

Enables easier management of security policies specific to cybersecurity devices Provides isolation that helps protect security devices from general network traffic and potential attacks Adding a firewall (A) is useful but does not replace subnet segregation. Moving devices to a DMZ (C) is typically reserved for systems that bridge between enterprise and ICS networks (often at Purdue Level 3 to Level 4 boundaries), not internal device placement within Level 3.

This approach is emphasized in GICSP's ICS Security Architecture & Network Segmentation domain as a fundamental network design principle.

NEW QUESTION # 54

Which of the following is a team of incident responders that often coordinate with organizations and law enforcement to reduce risks and advise on security threats?

- A. CVE
- B. CERT
- C. COBIT
- D. CVSS

Answer: B

Explanation:

CERT (Computer Emergency Response Team) (C) is a designated group of cybersecurity experts who provide incident response, threat intelligence, and coordination with organizations and law enforcement to manage and reduce cybersecurity risks.

CVE (A) is a list of publicly disclosed vulnerabilities.

COBIT (B) is a framework for IT governance and management.

CVSS (D) is a scoring system for vulnerabilities.

GICSP highlights CERTs as critical entities in incident handling and collaborative cyber defense.

NEW QUESTION # 55

During a plant upgrade an architect needs to connect legacy IEDs to a new TCP/IP instrumentation LAN. The IEDs only have RS-232 communication interfaces available. What would best be used to connect the IEDs?

- A. Engineering workstation
- B. Industrial switch
- C. Data diode
- D. Communications Gateway

Answer: D

Explanation:

Legacy devices using RS-232 interfaces require a communications gateway (C) to translate between the serial communication protocol and the new TCP/IP network.

A data diode (A) is a unidirectional security device, not a protocol translator.

An engineering workstation (B) is a computer, not a protocol conversion device.

An industrial switch (D) operates at the Ethernet layer and does not perform protocol conversion.

GICSP emphasizes gateways as essential for integrating legacy ICS devices into modern IP networks while maintaining protocol integrity.
