- A. You can configure unreliable protocols to communicate with FortiGuard Server.
- **B. FortiGate identified the FortiGuard Server using DNS lookup.**
- **C. The weight increases as the number of failed packets rises.**
- D. FortiGate is using the default port for FortiGuard communication.

Answer: B,C

Explanation:

FortiGate identified the FortiGuard Server using DNS lookup → The server is shown with a private IP (10.0.1.241), which indicates FortiGate resolved it via DNS or explicit override rather than using default FortiGuard anycast servers.

The weight value reflects server reliability. It decreases with good performance and increases as packet loss or failures rise, meaning higher weight indicates more failures.

NEW QUESTION # 97

FortiGate is integrated with FortiAnalyzer and FortiManager.

When creating a firewall policy, which attribute must an administrator include to enhance functionality and enable log recording on FortiAnalyzer and FortiManager?

- A. Policy ID
- B. Sequence ID
- C. Log ID
- **D. Universally Unique Identifier**

Answer: D

Explanation:

When creating firewall objects or policies, a UUID attribute is added so that logs can record these UUIDs and improve functionality when integrating with FortiManager or FortiAnalyzer.

    set memory-use-threshold-red 88
end
```

The exhibits show the system performance output and default configuration of high memory usage thresholds on a FortiGate device. Based on the system performance output, what are the two possible outcomes? (Choose two.)

- A. Administrators can access FortiGate only through the console port.
- B. FortiGate drops new sessions.
- C. FortiGate has entered conserve mode.
- D. Administrators can change the configuration.

Answer: B,D

Explanation:

Since memory usage is at 90%, exceeding the red threshold (88%), FortiGate enters a state where configuration changes are still allowed.

In this state, FortiGate drops new sessions to preserve resources and maintain stability.
