After twenty to thirty hours' practice, you are ready to take the real Data-Architect Exam Torrent. The results will never let you down. You just need to wait for obtaining the certificate.

Salesforce Certified Data Architect Sample Questions (Q152-Q157):

NEW QUESTION # 152
Universal Containers (UC) is building a Service Cloud call center application and has a multisystem support solution. UC would like or ensure that all systems have access to the same customer information.
What solution should a data architect recommend?

- A. Make Salesforce the system of record for all data.
- B. Implement a master data management (MDM) strategy for customer data.
- C. Let each system be an owner of data it generates.
- D. Load customer data in all systems.

Answer: B

Explanation:
A master data management (MDM) strategy for customer data can help UC ensure that all systems have access to the same customer information, without loading or duplicating data in all systems. An MDM strategy can also help UC avoid data conflicts

and inconsistencies that may arise from having multiple systems as owners of data.

NEW QUESTION # 153

Universal Containers (UC) has a requirement to create an Account plan object that is related to the Account object. Each Account plan needs to have an Account object, but the accessibility requirement of the Account plan is different from the Account object. What should an Architect recommend?

- A. Create an account plan object with a lookup relationship to Account with validation rules to enforce the Account association.
- B. Create a custom account plan object as detail with Account as mater in a master-detail relationship.
- C. Create a custom account plan object as detail with Account as master with additional sharing rules to allow access.
- D. Create an account plan object with a lookup relations to Account without any validation rules to enforce the Account association.

Answer: A

NEW QUESTION # 154

UC is building a salesforce application to track contacts and their respective conferences that they have attended with the following requirements:
1. Contacts will be stored in the standard contact object.
2. Conferences will be stored in a custom conference_ c object.
3. Each contact may attend multiple conferences and each conference may be related to multiple contacts.
How should a data architect model the relationship between the contact and conference objects?

- A. Create a master detail relationship field on the Conference object.
- B. Create a master detail relationship field on the Contact object.
- C. Create a lookup relationship field on contact object.
- D. Implement a Contact Conference junction object with master detail relationship to both contact and conference_c

Answer: D

NEW QUESTION # 155

A customer wants to maintain geographic location information including latitude and longitude in a custom object. What would a data architect recommend to satisfy this requirement?

- A. Create formula fields with geolocation function for this requirement.
- B. Recommend app exchange packages to support this requirement.
- C. Create a geolocation custom field to maintain this requirement
- D. Create custom fields to maintain latitude and longitude information

Answer: D

NEW QUESTION # 156

Universal Containers is planning out their archiving and purging plans going forward for their custom objects Topic__c and Comment__c. Several options are being considered, including analytics snapshots, offsite storage, scheduled purges, etc. Which three questions should be considered when designing an appropriate archiving strategy?

- A. Are there any regulatory restrictions that will influence the archiving and purging plans?
- B. If reporting is necessary, can the information be aggregated into fewer, summary records?
- C. Which profiles and users currently have access to these custom object records?
- D. Will the data being archived need to be reported on or accessed in any way in the future?
- E. How many fields are defined on the custom objects that need to be archived?

Answer: A,B,D

......
