Please believe us because the service and the NetSec-Analyst study materials are both good and that our product and website are absolutely safe without any virus.

## Palo Alto Networks NetSec-Analyst Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Troubleshooting: This section of the exam measures the skills of Technical Support Analysts and covers the identification and resolution of configuration and operational issues. It includes troubleshooting misconfigurations, runtime errors, commit and push issues, device health concerns, and resource usage problems. This domain ensures candidates can analyze failures across management systems and on-device functions, enabling them to maintain a stable and reliable security infrastructure.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Object Configuration Creation and Application:</b> This section of the exam measures the skills of Network Security Analysts and covers the creation, configuration, and application of objects used across security environments. It focuses on building and applying various security profiles, decryption profiles, custom objects, external dynamic lists, and log forwarding profiles. Candidates are expected to understand how data security, IoT security, DoS protection, and SD-WAN profiles integrate into firewall operations. The objective of this domain is to ensure analysts can configure the foundational elements required to protect and optimize network security using Strata Cloud Manager.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Management and Operations:</b> This section of the exam measures the skills of Security Operations Professionals and covers the use of centralized management tools to maintain and monitor firewall environments. It focuses on Strata Cloud Manager, folders, snippets, automations, variables, and logging services. Candidates are also tested on using Command Center, Activity Insights, Policy Optimizer, Log Viewer, and incident-handling tools to analyze security data and improve the organization overall security posture. The goal is to validate competence in managing day-to-day firewall operations and responding to alerts effectively.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Policy Creation and Application:</b> This section of the exam measures the abilities of Firewall Administrators and focuses on creating and applying different types of policies essential to secure and manage traffic. The domain includes security policies incorporating App-ID, User-ID, and Content-ID, as well as NAT, decryption, application override, and policy-based forwarding policies. It also covers SD-WAN routing and SLA policies that influence how traffic flows across distributed environments. The section ensures professionals can design and implement policy structures that support secure, efficient network operations.</li> </ul>

## Palo Alto Networks Network Security Analyst Sample Questions (Q108-Q113):

### NEW QUESTION # 108

What is the minimum frequency for which you can configure the firewall to check for new wildfire antivirus signatures?

- A. every 24 hours
- B. every 30 minutes
- C. every 5 minutes
- **D. every 1 minute**

**Answer: D**

Explanation:

### NEW QUESTION # 109

Which order of steps is the correct way to create a static route?

- **A. 1) Enter the route and netmask  
2) Enter the IP address for the specific next hop  
3) Specify the outgoing interface for packets to use to go to the next hop  
4) Add an IPv4 or IPv6 route by name**
- B. 1) Enter the route and netmask  
2) Specify the outgoing interface for packets to use to go to the next hop  
3) Enter the IP address for the specific next hop  
4) Add an IPv4 or IPv6 route by name
- C. 1) Enter the IP address for the specific next hop  
2) Add an IPv4 or IPv6 route by name  
3) Enter the route and netmask  
4) Specify the outgoing interface for packets to use to go to the next hop
- D. 1) Enter the IP address for the specific next hop  
2) Enter the route and netmask  
3) Add an IPv4 or IPv6 route by name  
4) Specify the outgoing interface for packets to use to go to the next hop

**Answer: A**

Explanation:

- \* Enter the route and netmask
- \* Enter the IP address for the specific next hop
- \* Specify the outgoing interface for packets to use to go to the next hop
- \* Add an IPv4 or IPv6 route by name Comprehensive Explanation: This is the correct order of steps to create a static route in a virtual router on the firewall. The first step is to enter the route and netmask for the destination network, such as 192.168.2.2/24 for an IPv4 address or 2001:db8:123:1::1/64 for an IPv6 address. The second step is to enter the IP address for the specific next hop, such as 192.168.56.1 or 2001:db8:49e:1::1. The third step is to specify the outgoing interface for packets to use to go to the next hop, such as ethernet1/1. The fourth step is to add an IPv4 or IPv6 route by name, such as route11.
