Professional ability is very important both for the students and for the in-service staff because it proves their practical ability in the area. Therefore choosing a certificate exam which boosts great values to attend is extremely important for them and the test ACD201 certification is one of them. Passing the test certification can prove your outstanding major ability in some area and if you want to pass the ACD201 test smoothly you'd better buy our ACD201 test guide. And our ACD201 exam questions boost the practice test software to test the clients' ability to answer the questions.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.

Topic 2	• Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 3	• Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
Topic 4	• Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.

Latest ACD201 Cram Materials - ACD201 Upgrade Dumps

In this circumstance, if you are the person who is willing to get ACD201 exam prep, our products would be the perfect choice for you. Here are some advantages of our ACD201 exam prep, our study materials guarantee the high-efficient preparing time for you to make progress is mainly attributed to our marvelous organization of the content and layout which can make our customers well-focused and targeted during the learning process. As a result, our ACD201 Study Materials raise in response to the proper time and conditions while an increasing number of people are desperate to achieve success and become the elite.

Appian Senior Developer Sample Questions (Q58-Q63):

NEW QUESTION # 58
You're designing a report to show the total number of cases per month grouped by region. A synced record exists for the data source.
Which design pattern is most appropriate in this case?

- A. Use a!queryRecordType() with a!aggregationFieids() to group the case creation date by region into a local variable. Pass the local variable value into the data input of a!columnChartField()
- B. Configure a!columnChartFieid() using a!columnChartConfig() with the case creation date as the primaryGrouping and the region as the secondaryGrouping.
- C. Configure a!pieChartFieid() using a!pieChartConfig() with the case creation date as the primaryGrouping and the region as the secondaryGrouping.

Answer: A

Explanation:
Using a!queryRecordType() with a!aggregationFields() to group by case creation date and region, storing the result in a local variable and passing it to the data input of a!columnChartField() ensures efficient aggregation and flexible chart display for your report.

NEW QUESTION # 59
You're building an order management system.
You need to create a field that displays the total number of days it took to deliver each order, and show and sort by this data in a read-only grid. The data must be available in real-time.
Which function is the most appropriate for calculating this value?

- A. a!customFieldDateDiff()
- B. calworkdays()
- C. a!subtractDateTime()

Answer: A

Explanation:

a!customFieldDateDiff() is specifically designed for calculating date differences as custom record fields, enabling sorting and real-time calculation in read-only grids.

NEW QUESTION # 60
Which two options are correct regarding record relationships when using synced records in your application?
(Choose two.)

- A. Up to 20 relationships can be added on a record type with data sync enabled.
- B. Relationships can be established between any record types that have sync enabled, regardless of the source.
- C. Record type relationships enforce referential integrity.
- D. Many-to-one relationships can be established using record relationships.

Answer: A,D

Explanation:
Many-to-one relationships can be established between record types using record relationships.
Up to 20 relationships can be added to a record type with data sync enabled, according to Appian platform limits.

NEW QUESTION # 61
In reviewing the process model metrics of your application, you notice a process model with a completion rate of only 10%.
What are two possible reasons for this low completion rate? (Choose two.)

- A. There are a significant number of instances that are experiencing process errors, which are not being handled by the production support team.
- B. The process contains at least one User Input Task with no exceptions or escalations, and users do not complete the task.
- C. The days configured for archival or deletion is significantly higher than the other process models in your application.
- D. There are a high number of smart service nodes configured in the process model.

Answer: A,B

Explanation:
Process errors that remain unhandled will stall instances; those instances never reach an end event, driving the completion rate down.
User-input tasks without deadlines, exceptions, or escalations can sit indefinitely when users do not act, leaving instances in an active state and lowering the overall completion percentage.

NEW QUESTION # 62
After reviewing the latest Expression performance logs, you notice you have several expressions contributing to slow interface or process performance.
Which two conditions will lead to a higher risk associated with slow-performing expressions? (Choose two.)

- A. When the expression is used in a local variable.
- B. When the expression is a custom function plug-in.
- C. When the expression is used frequently or by many concurrent users.
- D. When the expression is evaluated on a mobile device.

Answer: B,C

Explanation:
When the expression is used frequently or by many concurrent users.
A slow-running rule that executes a large number of times - or is triggered by many users at once - multiplies its performance impact, raising the overall risk flagged in the expression-performance logs.
When the expression is a custom function plug-in.
Custom Java plug-ins can introduce additional processing overhead (or poorly optimized code). If such functions are slow, they typically appear near the top of performance logs and carry a higher risk score.

NEW QUESTION # 63

......

It is acknowledged that there are numerous ACD201 learning questions for candidates for the exam, however, it is impossible for you to summarize all of the key points in so many ACD201 study materials by yourself. But since you have clicked into this website for ACD201 Practice Guide you need not to worry about that at all because our company is especially here for you to solve this problem. Trust us and you will get what you want!
