InsuranceSuite-Analyst New Study Plan - Top InsuranceSuite-Analyst

Questions

Our Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam prep torrent will provide customers with three different versions, including the PDF version, the software version and the online version, each of them has its own advantages. Now I am going to introduce you the PDF version of InsuranceSuite-Analyst test braindumps which are very convenient. It is well known to us that the PDF version is very convenient and practical. The PDF version of our InsuranceSuite-Analyst Test Braindumps provide demo for customers; you will have the right to download the demo for free if you choose to use the PDF version. At the same time, if you use the PDF version, you can print our InsuranceSuite-Analyst exam torrent by the PDF version; it will be very easy for you to take notes. I believe our InsuranceSuite-Analyst test braindumps will bring you great convenience.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

Which of the following statements describe the importance of acceptance criteria in a software implementation project? (Select three)

- A. They are used to confirm whether the user story can be accepted
- B. They facilitate the writing of automated test scenarios with BDD
- C. They describe desired system functionality when "done" from the business perspective
- D. They are acceptance tests
- E. They describe how to correctly configure and code requirements

Answer: A,B,C

Explanation:

Acceptance criteria play a critical role in Guidewire InsuranceSuite projects by defining clear, testable conditions that must be met for a user story to be considered complete. Their importance spans business alignment, testing clarity, and delivery quality, making Options A, C, and E correct.

Acceptance criteria describe the desired system functionality when the story is "done" from the business perspective (Option A). They translate business intent into observable outcomes, ensuring that all stakeholders share a common understanding of expected behavior.

They also facilitate the creation of automated test scenarios, especially when using Behavior-Driven Development (BDD) approaches (Option C). Well-written acceptance criteria can be directly mapped to test scenarios, reducing ambiguity and improving test coverage.

Finally, acceptance criteria are used to confirm whether a user story can be accepted (Option E). They provide an objective basis for determining completion, helping Product Owners and Business Analysts validate that the delivered functionality meets expectations. The remaining options are incorrect. Acceptance criteria do not describe how to configure or code the solution (Option B); that is an implementation detail. They are also not acceptance tests themselves (Option D) but serve as inputs to define such tests.

NEW QUESTION # 35

Identify which of the following are phases in the Guidewire Project Lifecycle:

- A. Maintenance
- B. Initiation
- C. Development
- D. Delivery
- E. Deployment
- F. Inception

Answer: C,E,F

Explanation:

The Guidewire implementation methodology (SurePath) structures the project lifecycle into distinct phases to ensure value delivery and risk management. Based on the InsuranceSuite Analyst documentation, the correct phases from your list are:

* Inception (C): This is the initial phase of the project execution (following Pre-Inception). The primary goals are to confirm the scope, produce the initial backlog of user stories, finalize the project plan, and obtain agreement on the Minimum Viable Product (MVP).

* Development (F): This is the iterative "Construction" phase. It is divided into multiple Sprints. During this phase, the team configures

the application, develops integration points, and conducts unit testing to turn user stories into working software.

* Deployment (D): This phase focuses on moving the application from the test environment to the Production environment. It includes final "Deployment Prep" activities such as data migration, performance tuning, user training, and the actual "Go-Live" event.

Why the other options are incorrect:

* A. Maintenance: While "Support & Maintenance" occurs after the project, it is considered the operational lifecycle (BAU) rather than a core implementation project phase.

* B. Delivery: This is the overarching term for the entire engagement (e.g., "Guidewire Delivery Methodology") but is not a specific phase name itself.

* E. Initiation: Guidewire terminology uses "Pre-Inception" or "Inception" rather than the generic PMI term "Initiation."

NEW QUESTION # 36

Please select User Story Card best practices from the list below. (Choose two)

- A. Change a requirement number after the story card has been published
- B. Include field requirements in the UI Mock-up tab
- C. Include a requirement number for traceability
- D. Review every requirement with the team

Answer: C,D

Explanation:

Guidewire SurePath emphasizes consistency, clarity, and traceability when documenting User Story Cards.

Two key best practices that support these principles are including requirement numbers for traceability and reviewing every requirement with the team, making Options C and D correct.

Including a requirement number (Option C) is a critical best practice because it enables end-to-end traceability. Requirement numbers allow analysts to link business requirements to user stories, acceptance criteria, test cases, defects, and final delivery. This is especially important in regulated insurance environments and large Guidewire programs where scope control and auditability are essential.

Reviewing every requirement with the team (Option D) ensures shared understanding across Business Analysts, Developers, and Quality Analysts. These reviews help identify gaps, assumptions, and ambiguities early, reducing rework and defects later in the project. This collaborative approach aligns with Agile and Guidewire's emphasis on early validation.

The remaining options are not best practices. Field-level requirements should be documented in requirement or rules sections, not embedded in UI mockup tabs (Option A). Changing requirement numbers after publication (Option B) breaks traceability and creates confusion across dependent artifacts.

NEW QUESTION # 37

According to SurePath Best Practices, which of these are key activities in the Inception Phase of the project? (Select two)

- A. Foundational Configuration
- B. Build Solutions
- C. Elaborate Requirements
- D. Benefit-mapping Workshop
- E. Estimate the Backlog

Answer: D,E

Explanation:

Comprehensive and Detailed Explanation (250-300 words):

The Inception Phase in Guidewire SurePath focuses on alignment, planning, and validation rather than building solutions.

A Benefit-mapping workshop (Option D) is used to align business objectives with expected outcomes and prioritize value delivery. Estimating the backlog (Option E) is another key activity, helping teams understand scope, effort, and feasibility early in the project.

Foundational configuration and solution building occur later, while requirement elaboration spans inception and iteration phases but is not the primary inception activity.

NEW QUESTION # 38

During a major upgrade of the Guidewire Cloud platform, a customer experiences unexpected downtime for their production

environment. What is the MOST likely reason why strict adherence to Guidewire Cloud Standards could have mitigated this issue?

- A. Adhering to Cloud Standards ensures that customer-specific customizations are compatible with the new platform version, reducing the risk of upgrade failures.
- B. Following Cloud Standards eliminates the need for any customer involvement during Guidewire Cloud platform upgrades.
- C. Cloud Standards provide a mechanism to automatically roll back the upgrade in case of any issues detected during the process.
- D. Cloud Standards dictate the timing and duration of all platform upgrades, allowing customers to control the schedule.

Answer: A

Explanation:

Guidewire Cloud Standards are designed to ensure upgradeability, stability, and reliability of customer environments. The most likely reason adherence could have mitigated unexpected downtime is Option C.

By following Cloud Standards, customer-specific customizations remain compatible with platform upgrades

. These standards restrict unsupported customization patterns and enforce best practices that ensure new platform versions can be applied smoothly.

The other options are incorrect. Cloud Standards do not eliminate customer involvement (Option A), do not guarantee automatic rollback (Option B), and do not give customers control over upgrade schedules (Option D).

NEW QUESTION # 39

.....

With the rapid development of our society, most of the people tend to choose express delivery to save time. Our delivery speed is also highly praised by customers. Our InsuranceSuite-Analyst exam dumps won't let you wait for such a long time. As long as you pay at our platform, we will deliver the relevant InsuranceSuite-Analyst Test Prep to your mailbox within 5-10 minutes. Our InsuranceSuite-Analyst test prep embrace latest information, up-to-date knowledge and fresh ideas, encouraging the practice of thinking out of box rather than treading the same old path following a beaten track.
