## **Salesforce Analytics-Con-201 Latest Version, Analytics-Con-201 Test Question**

If you feel that you just don't have enough competitiveness to find a desirable job. Then it is time to strengthen your skills. Our Analytics-Con-201 exam simulating will help you master the most popular skills in the job market. Then you will have a greater chance to find a desirable job. Also, it doesn't matter whether have basic knowledge about the Analytics-Con-201 training quiz for the content of our Analytics-Con-201 study guide contains all the exam keypoints which you need to cope with the real exam.

## **Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q36-Q41):**

### **NEW QUESTION # 36**

A CRM Analytics consultant is updating an existing recipe.

They are looking to add a few additional fields onto the Account dataset. One of the fields to be added is a multi-select picklist field that needs to be shown as text on the dashboard.

What should the consultant do to accomplish this?

- A. Use the array\_join multivalue function to convert this field to a text prior to registering the dataset.
- B. Use the string multivalue function to convert this field to a text prior to registering the dataset.
- C. Use the array multivalue function to convert this field to a text prior to registering the dataset.

**Answer: A**

#### NEW QUESTION # 37

An CRM Analytics consultant creates a model to maximize the satisfaction of cases. They want to deploy the model and further use the model and predictions in an existing automated business process powered by Salesforce Flow.

What is the most efficient way to accomplish this?

- A. Write an Apex class with Einstein Discovery Predictions and append them to process.
- B. Create a trigger on Case object and use REST APIs to append the predictions into the business process.
- C. Use the Einstein Discovery flow action to make a prediction with the flow.

**Answer: C**

#### NEW QUESTION # 38

Universal Containers asks a CRM Analytics consultant to review the performance of its local data sync.

After removing unused objects and fields from connected data, what else should the consultant do to improve performance of the data sync?

- A. Contact Salesforce Support to increase sync speed.
- B. Evaluate connection mode for each connected object.
- C. Enable fast sync in analytics settings.

**Answer: B**

Explanation:

To improve the performance of local data sync in Universal Containers, evaluating the connection mode for each connected object is a practical approach. Here's the rationale:

\* Optimization of Resources: Different connection modes (e.g., Full Sync, Incremental Sync) use different amounts of resources.

Choosing the right mode for each object based on how frequently its data changes can optimize the sync process and reduce load times.

\* Efficient Data Handling: By tailoring the connection mode to the needs of specific data objects, the overall efficiency of the data sync process is improved, leading to faster refresh rates and more timely data availability.

\* Cost and Performance Balance: Evaluating and selecting the appropriate connection mode can also help balance performance needs with cost constraints, as some modes may consume more compute resources than others.

#### NEW QUESTION # 39

The sales team at Cloud Kicks is requesting that datasets for their dashboards be refreshed every hour. The CRM Analytics consultant investigates if this is possible and finds that the dashboards use five datasets created from two recipes. The first recipe takes 43 minutes to run and the second recipe takes 25 minutes to run.

Which consideration should the consultant keep in mind?

- A. The number of concurrent recipe run limits that are associated with the org.
- B. The total duration of the recipe runtimes can exceed the limit of 1 hour.
- C. The number of concurrent recipe runs can exceed the limit of two in a 24-hour rolling period.

**Answer: B**

Explanation:

In CRM Analytics, recipes are used to prepare and combine data for datasets. The total duration of the recipe runtime is an important consideration when scheduling dataset refreshes. In this case, the combined runtime for both recipes (43 minutes + 25

minutes = 68 minutes) exceeds 1 hour. Since dataset refreshes cannot be scheduled more frequently than the total recipe runtime, it would be impossible to refresh the datasets every hour. This limitation must be considered when managing dataset refresh schedules.

#### NEW QUESTION # 40

A CRM Analytics consultant has been tasked with providing access to CRM Analytics for a few users. They should be able to view the data but unable to export it.

Which permission should the consultant make sure to NOT include?

- A. Download CRM Analytics data
- B. Export CRM Analytics data
- C. View CRM Analytics Assets

**Answer: A**

#### NEW QUESTION # 41
