

# EDGE-Expert test braindumps: Excellence in Design for Greater Efficiencies (EDGE Expert) Exam & EDGE-Expert exam cram

P.S. Free & New EDGE-Expert dumps are available on Google Drive shared by PDFVCE: <https://drive.google.com/open?id=1XXmrcBpnJj-ZrJCZ0KLatFBdu4lqRaQ9>

Technologies are changing at a very rapid pace. Therefore, the Excellence in Design for Greater Efficiencies (EDGE Expert) Exam in Procurement and Supply EDGE has become very significant to validate expertise and level up career. Success in the Excellence in Design for Greater Efficiencies (EDGE Expert) Exam examination helps you meet the ever-changing dynamics of the tech industry. To advance your career, you must register for the Excellence in Design for Greater Efficiencies (EDGE Expert) Exam EDGE-Expert in Procurement and Supply EDGE test and put all your efforts to crack the EDGE EDGE-Expert challenging examination.

Our EDGE-Expert Test Torrent keep a look out for new ways to help you approach challenges and succeed in passing the Excellence in Design for Greater Efficiencies (EDGE Expert) Exam exam. To be recognized as the leading international exam bank in the world through our excellent performance, our Excellence in Design for Greater Efficiencies (EDGE Expert) Exam qualification test are being concentrated on for a long time and have accumulated mass resources and experience in designing study materials. There is considerable skilled and motivated staff to help you obtain the Excellence in Design for Greater Efficiencies (EDGE Expert) Exam exam certificate. We sincerely wish you trust and choose us wholeheartedly.

## EDGE-Expert Latest Examprep - EDGE-Expert Valid Test Vce

You can download the Excellence in Design for Greater Efficiencies (EDGE Expert) Exam EDGE-Expert product right after purchasing and start your journey toward your big career. The EDGE EDGE-Expert exam questions are very similar to actual EDGE EDGE-Expert Exam Questions. We provide our valuable customers to try a demo before their purchase to test all features of the EDGE EDGE-Expert certification exam product confidently.

## EDGE Excellence in Design for Greater Efficiencies (EDGE Expert) Exam Sample Questions (Q72-Q77):

### NEW QUESTION # 72

What is a valid use for collected rainwater to qualify for savings under EDGE?

- A. Redirecting to nearest water body
- B. Redirecting to nearest drain
- C. Ground water recharge
- D. Using for air-conditioning in cooling towers

**Answer: D**

Explanation:

In the EDGE water assessment, rainwater harvesting contributes to savings only when the collected rainwater is used to directly reduce the building's demand for potable or municipal water. The curriculum explains that qualifying water savings must come from substituting potable water in recognized end uses such as toilet flushing, irrigation, and cooling tower make-up water where

applicable. When rainwater is used as make-up water for cooling towers, it displaces treated potable water that would otherwise be required for heat rejection systems, and this reduction is captured in the EDGE software water calculations.

By contrast, options such as groundwater recharge or simply redirecting rainwater to drains or nearby water bodies do not reduce the building's potable water consumption. These actions may be beneficial for stormwater management, flood control, or environmental protection, but they do not represent a direct offset of the building's indoor or process water demand in the way EDGE quantifies water savings for certification.

Therefore, the valid use that qualifies for EDGE water savings in this question is using collected rainwater for cooling towers.

### NEW QUESTION # 73

Which of the following types of light bulbs will have the highest efficacy of lumens per watt?

- A. Light emitting diodes LEDs
- B. T8 fluorescent lamps
- C. Compact fluorescent lamps CFLs
- D. T5 fluorescent lamps

**Answer: A**

Explanation:

In the CBCI EDGE curriculum, lighting efficiency is a critical strategy for reducing internal loads and lowering overall building energy consumption. Lighting efficacy is measured in lumens per watt, indicating how much visible light is produced for each unit of electrical power consumed. Among the listed options, light emitting diodes, or LEDs, provide the highest efficacy.

Typical performance ranges show that T8 and T5 fluorescent lamps are more efficient than older lighting technologies but generally deliver lower lumens per watt compared to modern LED systems. Compact fluorescent lamps are also more efficient than incandescent lighting but still fall short of the efficacy achieved by LEDs. Contemporary LED fixtures can exceed 100 lumens per watt and in many cases reach significantly higher values depending on product quality and design.

The EDGE software rewards high-efficiency lighting systems because reducing lighting power density directly lowers cooling loads in air-conditioned spaces and decreases total delivered energy consumption.

LEDs also offer additional advantages such as longer lifespan and lower maintenance requirements, further supporting sustainable building design objectives. Therefore, among the listed options, LEDs have the highest efficacy and are the correct answer.

### NEW QUESTION # 74

What is the eligibility requirement to attend an EDGE Expert training?

- A. At least a bachelor's degree qualification in any field
- B. No prerequisite regarding qualifications
- C. Three years of experience working as a skilled professional or tradesperson in the construction industry
- D. At least a bachelor's degree qualification in a construction industry related field

**Answer: B**

Explanation:

The CBCI EDGE curriculum distinguishes clearly between eligibility to attend the EDGE Expert training and eligibility to be licensed or recognized as an EDGE Expert. For attending the training itself, the curriculum states that there is no formal prerequisite regarding qualifications. This is because the training is designed to be accessible to a wide range of participants, including professionals who may support EDGE projects indirectly, students, and stakeholders who want to understand the EDGE standard and the certification process.

The stricter requirements such as having a bachelor's degree or having specific construction industry experience relate to later steps in the pathway, especially when a participant aims to progress from training attendance to formal credentialing, licensing, or professional recognition as an EDGE Expert. In other words, options B, C, and D reflect possible qualification pathways for becoming eligible for the credential, not for simply joining the training. Therefore, when the question asks specifically about the eligibility requirement to attend an EDGE Expert training, the correct answer is that there is no prerequisite regarding qualifications.

### NEW QUESTION # 75

Is it possible to be both the EDGE Expert and Auditor on a project?

- A. No, even if EDGE Certifier agrees to special terms to have no conflict of interest.

- B. Yes, they can be both an EDGE Auditor and EDGE Expert in all cases.
- **C. No, an EDGE Expert cannot be the EDGE Auditor on the same project.**
- D. Yes, but only in the case that there are no other EDGE Auditors available for the project.

**Answer: C**

Explanation:

The EDGE framework strictly enforces separation of roles to maintain integrity and avoid conflicts of interest during the certification process. The EDGE Expert and Auditor Protocols explicitly address this issue: "An individual cannot serve as both the EDGE Expert and EDGE Auditor on the same project. This separation ensures independence in the audit process, as the Expert's role as a consultant advising the project team could bias the Auditor's objective assessment of the project's compliance with EDGE standards" (EDGE Expert and Auditor Protocols, Section 2.3: Conflict of Interest). Option A, no, an EDGE Expert cannot be the EDGE Auditor on the same project, directly reflects this rule. Option B (no, even if the Certifier agrees to special terms) adds an unnecessary condition, as the protocols do not allow exceptions: "No exceptions are permitted for an individual to serve in both roles on the same project, regardless of agreements or special terms" (EDGE Expert and Auditor Protocols, Section 2.3: Conflict of Interest). Option C (yes, in all cases) is incorrect, as it contradicts the conflict-of-interest rules: "Allowing dual roles in all cases would undermine the impartiality required for certification" (EDGE Certification Protocol, Section 3.1: Certification Process). Option D (yes, if no other Auditors are available) is also incorrect, as availability does not override the conflict-of-interest prohibition: "Even if no other Auditors are available, the roles must remain separate; the Client must find a different Auditor or delay the audit" (EDGE Expert and Auditor Protocols, Section 4.1: Audit Process). The EDGE User Guide reinforces this principle: "The separation of Expert and Auditor roles ensures a fair and unbiased certification process, protecting the credibility of EDGE certification" (EDGE User Guide, Section

6.4: Working with EDGE Experts). Thus, it is not possible to be both (Option A).

Reference: EDGE Expert and Auditor Protocols, Section 2.3: Conflict of Interest, Section 4.1: Audit Process; EDGE Certification Protocol, Section 3.1: Certification Process; EDGE User Guide Version 2.1, Section 6.4:

Working with EDGE Experts.

#### **NEW QUESTION # 76**

In the EDGE software, which of the following does NOT produce grey water?

- A. Shower
- B. Bath tub
- C. Hand wash basin
- **D. Water closet WC**

**Answer: D**

Explanation:

Within the CBCI EDGE curriculum, greywater is defined as relatively low-contamination wastewater generated from bathing and handwashing activities, typically coming from fixtures such as showers, wash basins, and bathtubs. This type of wastewater is considered suitable for recovery and reuse in certain non-potable applications, depending on local codes and the treatment approach, because it does not contain toilet waste.

A water closet WC produces blackwater, not greywater. Blackwater contains fecal matter and urine and therefore has a much higher pathogen load and organic content. Because of this, it requires more stringent treatment processes and different health and safety controls compared with greywater systems. In EDGE water measures, greywater reuse calculations and strategies are based on sources like showers and hand basins, while toilet discharge is excluded from greywater source assumptions.

Therefore, among the listed fixtures, the one that does not produce greywater in EDGE is the water closet WC, making option D the correct answer.

#### **NEW QUESTION # 77**

.....

The latest EDGE-Expert latest questions will be sent to you email, so please check then, and just feel free to contact with us if you have any problem. Our reliable EDGE-Expert exam material will help pass the exam smoothly. With our numerous advantages of our EDGE-Expert latest questions and service, what are you hesitating for? Our company always serves our clients with professional and precise attitudes, and we know that your satisfaction is the most important thing for us. We always aim to help you pass the EDGE-Expert Exam smoothly and sincerely hope that all of our candidates can enjoy the tremendous benefit of our EDGE-Expert exam material, which might lead you to a better future!
