## Reliable Cybersecurity-Practitioner Exam Practice – The Latest Cost Effective Dumps for Palo Alto Networks Cybersecurity-Practitioner: Palo Alto Networks Cybersecurity Practitioner

Our Cybersecurity-Practitioner exam questions are compiled by experts and approved by the professionals with years of experiences. The language is easy to be understood which makes any learners have no obstacles and our Cybersecurity-Practitioner guide torrent is suitable for anyone. The content is easy to be mastered and has simplified the important information. Our Cybersecurity-Practitioner test torrents convey more important information with less questions and answers and thus make the learning relaxing and efficient. With our Cybersecurity-Practitioner exam questions, you will pass the Cybersecurity-Practitioner exam with ease.

## Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q35-Q40):

### NEW QUESTION # 35

Which type of attack includes exfiltration of data as a primary objective?

- A. Denial-of-service (DoS)
- B. Cross-Site Scripting (XSS)
- C. Advanced persistent threat
- D. Watering hole attack

**Answer: C**

Explanation:

An Advanced Persistent Threat (APT) is a long-term, targeted cyberattack where data exfiltration is often the primary objective. Attackers maintain a covert presence in the network to steal sensitive information over time.

### NEW QUESTION # 36

Which option would be an example of PII that you need to prevent from leaving your enterprise network?

- A. Credit card number
- B. Trade secret
- C. National security information
- D. A symmetric encryption key

**Answer: A**

Explanation:

A credit card number is an example of PII that you need to prevent from leaving your enterprise network. PII, or personally identifiable information, is any information that can be used to identify an individual, either alone or in combination with other data. PII can be sensitive or non-sensitive, depending on the level of protection required and the potential harm if exposed. Sensitive PII includes data that can directly identify an individual and cause significant harm if leaked or stolen, such as financial information, medical records, or government-issued ID numbers. Non-sensitive PII includes data that is easily accessible from public sources and does not pose a high risk of identity theft, such as zip code, race, or gender. A credit card number is a sensitive PII because it can be used to access the cardholder's account, make fraudulent transactions, or steal their identity. Therefore, it is important to prevent credit card numbers from leaving the enterprise network, where they could be intercepted by hackers, malicious insiders, or third parties. To protect credit card numbers and other sensitive PII, enterprises should implement data security measures such as encryption, tokenization, masking, access control, auditing, and monitoring. Additionally, enterprises should comply with data privacy laws and standards that regulate the collection, use, and protection of PII, such as the Payment Card Industry Data Security Standard (PCI DSS), the General Data Protection Regulation (GDPR), or the California Consumer Privacy Act (CCPA).

### NEW QUESTION # 37

Which aspect of a SaaS application requires compliance with local organizational security policies?

- A. Vulnerability scanning and management
- B. Types of physical storage media used
- C. Acceptable use of the SaaS application
- D. Data-at-rest encryption standards

**Answer: C**

Explanation:

SaaS applications are cloud-based software that users can access from anywhere and any device. This poses a challenge for

organizations to ensure that their employees are using the SaaS applications in a secure and compliant manner. Therefore, organizations need to establish and enforce acceptable use policies (AUPs) for SaaS applications that define the rules and guidelines for accessing and using the applications, such as who can use them, what data can be stored or shared, and what actions are prohibited<sup>12</sup>. AUPs help organizations to protect their data, prevent unauthorized access, and comply with local regulations and standards<sup>3</sup>. #### NEW QUESTION # 38

Which component of the AAA framework verifies user identities so they may access the network?

- A. Authentication
- B. Allowance
- C. Accounting
- D. Authorization

**Answer: A**

Explanation:

Authentication is the component of the AAA (Authentication, Authorization, and Accounting) framework that verifies user identities (e.g., via passwords, certificates, or biometrics) before granting access to network resources.

#### NEW QUESTION # 39

Which type of portable architecture can package software with dependencies in an isolated unit?

- A. SaaS
- B. Air-gapped
- C. Serverless
- D. Containerized

**Answer: D**

Explanation:

A containerized architecture packages software along with its dependencies, libraries, and configuration into an isolated unit called a container. This ensures consistent behavior across environments and simplifies deployment and scaling.

#### NEW QUESTION # 40

.....

We hope that you have understood the major features of our three formats. Now let's discuss the benefits you can get upon buying our Palo Alto Networks Cybersecurity Practitioner (Cybersecurity-Practitioner) exam material today. The first benefit you can get is the affordable price. Our Palo Alto Networks Cybersecurity Practitioner (Cybersecurity-Practitioner) practice material is not expensive and every applicant can purchase it without running tight on his budget. Additionally, you can get a limited-time discount offer on real Cybersecurity-Practitioner exam questions as well.
