## Updated Salesforce Data-Architect Practice Material In 1 year

Since the content of the examination is also updating daily, you will need real and latest Salesforce Data-Architect Dumps to prepare successfully for the Data-Architect Certification Exam in a short time. People who don't study from updated Data-Architect questions fail the examination and loss time and money.

## Salesforce Certified Data Architect Sample Questions (Q13-Q18):

### NEW QUESTION # 13

UC is preparing to implement sales cloud and would like to its users to have read only access to an account record if they have access to its child opportunity record. How would a data architect implement this sharing requirement between objects?

- A. Implicit sharing will automatically handle with standard functionality.
- B. Add appropriate users to the account team.
- C. Create a criteria-based sharing rule.
- D. Create an owner-based sharing rule.

**Answer: A**

**Explanation:**

Implicit sharing will automatically handle this sharing requirement with standard functionality, as it grants read-only access to parent accounts when users have access to child opportunities. This is also known as account-opportunity sharing<sup>3</sup>. Creating a criteria-based sharing rule (option A) or an owner-based sharing rule (option D) is not necessary, as they are used to grant additional access based on record criteria or ownership.

Adding appropriate users to the account team (option C) is also not required, as it is used to grant access to specific users or groups for individual accounts.

#### NEW QUESTION # 14

Universal Containers has successfully migrated 50 million records into five different objects multiple times in a full copy sandbox. The Integration Engineer wants to re-run the test again a month before it goes live into Production. What is the recommended approach to re-run the test?

- A. Refresh the full copy sandbox and re-run the data migration test.
- B. Hard delete all 5 objects' data and re-run the data migration test.
- C. Truncate all 5 objects quickly and re-run the data migration test.
- D. Truncate all 5 objects and hard delete before running the migration test.

**Answer: A**

Explanation:

The recommended approach to re-run the test is to refresh the full copy sandbox and re-run the data migration test. A full copy sandbox is a replica of the production Org, including all data, metadata, and attachments. Refreshing a full copy sandbox means creating a new copy of the production Org and replacing the existing sandbox. This would ensure that the test is run on a clean and up-to-date environment, without any leftover data or configuration from previous tests. Truncating or hard deleting objects would not be sufficient, because they would not remove all the data or metadata from the sandbox, and they could also affect other dependent objects or processes.

#### NEW QUESTION # 15

In their legacy system, Universal Containers has a monthly accounts receivable report that compiles data from Accounts, Contacts, Opportunities, Orders, and Order Line Items. What difficulty will an architect run into when implementing this in Salesforce?

- A. Salesforce allows up to four objects in a single report type.
- B. A report cannot contain data from Accounts and Contacts.
- C. Salesforce does not support Orders or Order Line Items.
- D. Custom report types cannot contain Opportunity data.

**Answer: A**

#### NEW QUESTION # 16

Northern Trail outfitters is migrating to Salesforce from a legacy CRM system that identifies the agent relationships in a look-up table. What should the data architect do in order to migrate the data to Salesforce?

- A. Migrate to Salesforce without a record owner.
- B. Create custom objects to store agent relationships.
- C. Migrate the data and assign to a non-person system user.
- D. Assign record owner based on relationship.

**Answer: B**

#### NEW QUESTION # 17

Universal Containers' system administrators have been complaining that they are not able to make changes to its users' record, including moving them to new territories without getting "unable to lock row" errors. This is causing the system admins to spend hours updating user records every day.

What should the data architect do to prevent the error?

- A. Enable granular locking.
- B. Reduce number of users updated concurrently.
- C. Increase CPU for the Salesforce org.
- D. Analyze Splunk query to spot offending records.

**Answer: A**
