Efficient and Convenient Preparation with TestValid's Updated Avaya 71301T Exam Dumps

How to get a good job? If you are a freshman, a good educational background and some useful qualifications certification will make you outstanding. If you are dreaming for obtaining a IT certificate, our 71301T test dumps pdf will help you clear exam easily. If you are a working man, a valid certification will make you obtain an advantage over others while facing job promotion competition. Our 71301T Test Dumps Pdf can help you clear exam and obtain exam at the first attempt.

Avaya Aura Communication Applications Implement Sample Questions (Q64-Q69):

NEW QUESTION # 64

From a remote worker's SIP Endpoint connected via Mobile Workspace, which tool is used to trace the successful way through Avaya Session Border Controller for Enterprise (SBCE) of an Invite message?

- A. traceSBC
- **B. traceSM**
- C. traceMW
- D. traceRT

Answer: B

Explanation:

traceSM is an interactive perl script that allows an administrator to capture, view, and save call processing activity on a Session Manager. While not as powerful or versatile as Wireshark, traceSM is absolutely essential when it comes to working with Avaya SIP. First off, it allows you to view SIP messages even if they have been encrypted with TLS.

NEW QUESTION # 65

For an Avaya SIP telephone, working as a Remote Worker via the Avaya Session Border Controller for Enterprise (SBCE), which IP address should be configured in the Server List of the one-X Communicator?

- A. the SBCE External Interface allocated for Mobile Workspace Endpoint
- B. the Internal Avaya Aura Session Manager SM100 IP Address
- C. the SBCE Internal Interface allocated for Mobile Workspace Endpoint
- D. the Avaya Aura Session Manager External Interface allocated for Mobile Workspace Endpoints.

Answer: D

Explanation:

Remote Worker Avaya one-X Communicator Configuration

The following screens illustrate Avaya one-X Communicator administration settings for the Remote Worker used in the reference configuration. Example:

1. On the Avaya one-X Communicator application running on the PC, click on the Settings icon on the top right to display the Settings window.
2. Click on Telephony, the General Settings window will appear. The following values were used in the reference configuration:
Under Using: select SIP (SIP must be selected; H.323 is not supported for Remote Workers).
* Under Server List, click Add (the Add Server window to the right will appear).
* Under Proxy Server enter 192.168.157.180

This is one of the two "public" IP addresses for interface B1 on the Avaya SBCE used for Remote Worker access to Session Manager (public IP not used for relay services).

Etc.

NEW QUESTION # 66

Which four kinds of services does the TSAPI standard provide for third-party call control over Avaya Aura Communication Manager (CM)? (Choose four.)

- A. performing a remote reboot to the CM server
- B. completing the routing of incoming calls
- C. receiving notifications of events
- D. invoking CM features
- E. controlling specific calls or stations
- F. adding new feature buttons to agent sets

Answer: B,C,D,E

Explanation:

A: The services in the Event Report group provide a client application with the reports of events that cause a change in the state of a call, a connection, or a device.

B: The services in the call control group enable a telephony client application to control a call or connection on Communication Manager. Typical uses of these services are: placing calls from a device controlling a connection for a single call.

C: The services in the query group allow a client to query device features and static attributes of a Communication Manager device.

E: The services in the routing group allow Communication Manager to request and receive routing instructions for a call from a client application.

NEW QUESTION # 67

What are three ways of accessing Avaya Aura Application Enablement Services (AES) to perform administration? (Choose three.)

- A. with local access using a system console
- B. with an Open X.11 terminal window

- C. with remote access using SSH
- D. with web access
- E. with remote access using Rlogin

Answer: A,C,D

Explanation:

B: You can use a Web browser to access the Application Enablement Services Management Console (AE Services Management Console).

DE: Administrators can access the AE Services Linux shell (command prompt) either locally using a system console or remotely using a secure shell (ssh) client. This access method applies primarily to AE Services Technicians (craft users) who perform specific tasks, such as viewing trace logs, installing patches, and so forth.

NEW QUESTION # 68

To watch Avaya Session Border Controller for Enterprise (SBCE) messages in real-time as they pass through the SBCE, which tool on the SIP command line do you use?

- A. traceSBC
- B. trace
- C. traceSM
- D. traceTOOL

Answer: A

Explanation:

The tcpdump tool is the main troubleshooting tool of Avaya SBCE, which can capture network traffic. Using tcpdump is a reliable way to analyze the information arriving to and sent from the SBC. However, tcpdump has its own limitations, which can make troubleshooting difficult and time consuming. This traditional tool is not useful in handling encrypted traffic and real-time troubleshooting.

The traceSBC tool offers solutions for both issues.

In Real-time mode, traceSBC must be on active Avaya SBCE. traceSBC is started without specifying a file in the command line parameters. The tool automatically starts processing the log files. The live capture can be started and stopped anytime without affecting service.

Example:

```
# traceSBC
```

NEW QUESTION # 69

.....

With the development of the times, civilization is in progress, as well as TestValid. In order to help you get the 71301T exam certification to own a bright future as soon as possible, and you can get well-paid, TestValid has always been working hard. With efforts for years, the passing rate of TestValid 71301T Certification Exam has reached as high as 100%. Choose TestValid is to choose success
