Pass Guaranteed Quiz 2026 156-315.81: Check Point Certified Security Expert R81 – High-quality Latest Test Report

In order to meet the demands of all customers, our company has a complete set of design, production and service quality guarantee

system, the 156-315.81 study materials are perfect. We can promise that quality first, service upmost. If you buy the 156-315.81 study materials from our company, we are glad to provide you with the high quality 156-315.81 Study Materials and the best service. The philosophy of our company is "quality is life, customer is god." We can promise that our company will provide all customers with the perfect quality guarantee system and sound management system.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q633-Q638):

NEW QUESTION # 633

Check Point recommends configuring Disk Space Management parameters to delete old log entries when available disk space is less than or equal to?

- A. 50%
- B. 75%
- C. 80%
- D. 15%

Answer: D

Explanation:

Check Point recommends configuring Disk Space Management parameters to delete old log entries when available disk space is less than or equal to a certain threshold. In this case, the correct threshold is specified as option D: 15%.

So, when the available disk space reaches or falls below 15%, old log entries should be deleted to free up space.

Options A, B, and C do not represent the recommended threshold for deleting old log entries according to Check Point's best practices.

NEW QUESTION # 634

What is the benefit of Manual NAT over Automatic NAT?

- A. On IPSO and GAIA Gateways, it is handled in a stateful manner
- B. You have the full control about the priority of the NAT rules
- C. If you create a new Security Policy, the Manual NAT rules will be transferred to this new policy.
- D. There is no benefit since Automatic NAT has in any case higher priority over Manual NAT

Answer: B

NEW QUESTION # 635

Why would an administrator see the message below?

- A. A new Policy Package created on both the Management and Gateway will be deleted and must be backed up first before proceeding.
- B. A new Policy Package created on the Gateway and transferred to the Management will be overwritten by the Policy Package currently on the Gateway but can be restored from a periodic backup on the Gateway.
- C. A new Policy Package created on the Gateway is going to be installed on the existing Management.
- **D. A new Policy Package created on the Management is going to be installed to the existing Gateway.**

Answer: D

Explanation:

Explanation

A Policy Package is a set of rules and settings that define how a Security Gateway enforces security on traffic that passes through it. A Policy Package can be created on either the Management Server or the Security Gateway, but it must be installed on both to take effect. When a new Policy Package is created on the Management Server, it must be installed on an existing Security Gateway that has a different Policy Package installed. The message below warns the administrator that installing a new Policy Package will overwrite the existing one on the Security Gateway.

<https://www.bing.com/images/blob?bcid=qMoRhR0dzSkGmg>

The message also advises the administrator to back up their existing configuration before proceeding with the installation.

NEW QUESTION # 636

What is the difference between SSL VPN and IPSec VPN?

- A. SSL VPN requires installation of a resident VPN client.
- B. SSL VPN and IPSec VPN are the same.
- **C. IPSec VPN requires installation of a resident VPN client and SSL VPN requires only an installed Browser.**
- D. IPSec VPN does not require installation of a resilient VPN client.

Answer: C

Explanation:

The main difference between SSL VPN (Secure Sockets Layer Virtual Private Network) and IPSec VPN (Internet Protocol Security Virtual Private Network) is in the way they operate:

SSL VPN typically does not require the installation of a resident VPN client. It often relies on a web browser to establish the VPN

connection, making it more convenient for remote users who may not want to install dedicated VPN software. IPSec VPN, on the other hand, often requires the installation of a resident VPN client on the user's device to establish the VPN connection. This client software is necessary for configuring and managing the VPN connection. Option C, stating that SSL VPN and IPSec VPN are the same, is incorrect because they have distinct characteristics as described above. Option A is incorrect because it inaccurately suggests that IPSec VPN does not require a resident VPN client, which is not true in most cases. Option B is incorrect because it wrongly claims that SSL VPN requires the installation of a resident VPN client.

NEW QUESTION # 637

At what point is the Internal Certificate Authority (ICA) created?

- A. When an administrator decides to create one.
- B. Upon creation of a certificate.
- C. When an administrator initially logs into SmartConsole.
- **D. During the primary Security Management Server installation process.**

Answer: D

Explanation:

The Internal Certificate Authority (ICA) is created during the primary Security Management Server installation process. The ICA is responsible for issuing and managing certificates for all Check Point components in the network. The ICA is automatically installed as an integral part of the Security Management Server and can be managed from SmartConsole. References: R81 Security Management Administration Guide, page 113.

NEW QUESTION # 638

.....

People always want to prove that they are competent and skillful in some certain area.
