Pass Guaranteed Quiz Pass-Sure Deep-Security-Professional - Trend Micro Certified Professional for Deep Security Certification Practice

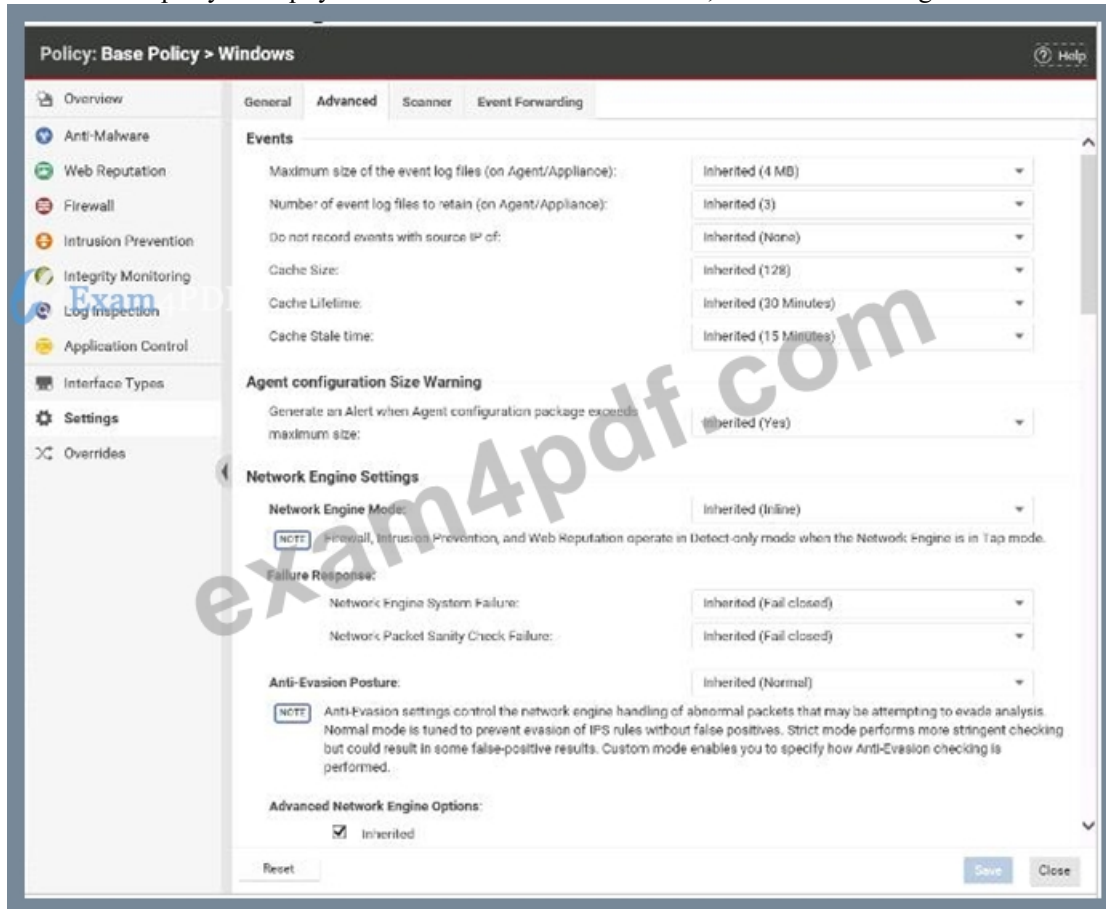

Like other Trend examinations, the Deep-Security-Professional exam preparation calls for a strong preparation and precise Deep-Security-Professional practice material. Finding original and latest 121 exam questions however, is a difficult process. Candidates require assistance finding the Deep-Security-Professional updated questions. It will be hard for applicants to pass the Trend Deep-Security-Professional exam on their first try if Trend Micro Certified Professional for Deep Security questions they have are not real and updated.

Trend Micro Certified Professional for Deep Security Sample Questions

(Q31-Q36):

NEW QUESTION # 31

The details of a policy are displayed in the exhibit. Based on these details, which of the following statements is true?

- A. Live packet streams coming through the network engine will be replicated and all traffic analysis will be performed on the replicated stream
- B. Packets failing the Network Packet Sanity Check will still be allowed to pass through the network engine.
- C. The credibility scores for visited web sites will be cached. If access to the web site is re-requested again within 30 minutes, its credibility score will be retrieved from the cache instead of the configured Smart Protection source.
- D. Any events generated by computers within your corporate network, as defined by an IP address range, will be ignored

Answer: C

NEW QUESTION # 32

The details for an event are displayed in the exhibit. Based on these details, which Protection Module generated the event?

The screenshot displays a security event log entry with the following details:

General Information	
Time:	June 21, 2018 13:59:42
Computer:	workstation_lyahn
Event Origin:	Agent
Reason:	1003802 - Directory Server - Microsoft Windows Active Directory
Description:	Active directory Success Audit event.
Rank:	100 = Asset Value x Severity Value = 1 x 100
Severity:	Critical (13)
Groups:	client_error,invalid_request,authentication_failed
Program Name:	syslogd
Event:	
Location:	
Source IP:	
Source Port:	
Destination IP:	
Destination Port:	
Protocol:	
Action:	

Navigation buttons: < Back, Next >, Close

- A. Integrity Monitoring
- B. Firewall
- C. Log Inspection
- D. Intrusion Prevention

Answer: C

Explanation:

The event details show a "Reason" referencing an Active Directory event (Success Audit), a "Description" that notes "Active directory Success Audit event," and a "Program Name" of "syslogd." This matches the operation of the Log Inspection module, which monitors logs from operating system and application sources and reports events such as authentication failures, system errors, and audit events.

The other modules do not generate events based on log entries in this manner.

MAC:	C9:23:5C:BC:0E:18
Port:	53
Packet Data	
Packet Size	400
< Back Next > Close	

- **A. Firewall**
- B. Integrity Monitoring
- C. Web Reputation
- D. Intrusion Prevention

Answer: A

NEW QUESTION # 34

Which of the following Firewall rule actions will allow data packets to pass through the Firewall Protection Module without being subjected to analysis by the Intrusion Prevention Protection Module?

- A. Force Allow
- B. Deny
- **C. Bypass**
- D. Allow

Answer: C

NEW QUESTION # 35

The Security Level for Web Reputation in a policy is set to High. A server assigned this policy attempts to access a Web site with a credibility score of 78.

What is the result?

- A. The Deep Security Agent displays a warning message as the site is unrated.
- **B. The Deep Security Agent blocks access as the credibility score for the Web site is below the allowed threshold. An error page is displayed in the Web browser.**
- C. The Deep Security Agent allows access as the credibility score for the Web site is above the allowed threshold.
- D. The Deep Security Agent allows access to the Web site, and logs the connection attempt as an Event.

Answer: B

Explanation:

At the High security level, Deep Security will block any site with a credibility score below 80 (as per Trend Micro documentation). A site with a score of 78 will be blocked, and an error page will be displayed.

Option B is incorrect; 78 is below the threshold.

Option A is incorrect; access will be blocked, not allowed.

Option D is incorrect; the question scenario gives a rated (scored) site, not an unrated one.
