

156-836 Learning Mode & 156-836 Exam Certification Cost

P.S. Free & New 156-836 dumps are available on Google Drive shared by TroytecDumps: <https://drive.google.com/open?id=1PUAfvb-I6kpFXa6zZ7s5GDksB82shaa>

Aspiring CheckPoint professionals strive to excel in CheckPoint 156-836 exams such as the Check Point Certified Maestro Expert - R81 (CCME) (156-836) to achieve their dream careers. However, passing the 156-836 Exam can be challenging, especially with a demanding schedule that leaves little time for preparation.

CheckPoint 156-836 (Check Point Certified Maestro Expert - R81 (CCME)) certification exam is designed to test the knowledge and skills of IT professionals in managing and deploying Check Point Maestro, which is a network security solution for large-scale and complex environments. Check Point Certified Maestro Expert - R81 (CCME) certification exam validates the expertise required to deploy, configure, and troubleshoot the Check Point Maestro solution in a variety of environments, including cloud, on-premises, and hybrid deployments.

Best Preparation Material For The CheckPoint 156-836 Exam Dumps from TroytecDumps

TroytecDumps offers affordable Check Point Certified Maestro Expert - R81 (CCME) exam preparation material. You don't have to go beyond your budget to buy updated CheckPoint 156-836 Dumps. Use the coupon code 'SAVE50' to get a 50% exclusive discount on all CheckPoint Exam Dumps. To make your 156-836 Exam Preparation material smooth, a bundle pack is also available that includes all the 3 formats of dumps questions.

CheckPoint Certified Maestro Expert (CCME) certification is an advanced level certification program offered by CheckPoint, a leading provider of cybersecurity solutions. Check Point Certified Maestro Expert - R81 (CCME) certification program is designed for professionals who have extensive knowledge and experience in deploying and managing complex security architectures using CheckPoint's Maestro technology.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample

Questions (Q79-Q84):

NEW QUESTION # 79

What cannot be learned from the output of lldpctl?

- A. Orchestrator's IP
- B. Serial number of Appliance
- C. Distribution mode
- D. Appliance model

Answer: C

Explanation:

The lldpctl command is a tool to display information about the devices discovered by the Link Layer Discovery Protocol (LLDP) on all ports of the Maestro Orchestrator and the Security Group Members. LLDP is a protocol that enables devices to exchange information about their identity, capabilities, and configuration.

LLDP can help to discover the topology and connectivity of the Maestro environment. The output of lldpctl can show the serial number, appliance model, and orchestrator's IP of the connected devices, but it cannot show the distribution mode of the Security Group. The distribution mode is the algorithm that determines how the Maestro Orchestrator distributes the traffic among the Security Group Members. To view the distribution mode, other commands such as asg monitor or asg stat can be used.

NEW QUESTION # 80

Which licenses should be issued for the Orchestrator?

- A. The Orchestrator is considered a Management server, hence it's licensed the same way
- B. The Orchestrator requires NGTX license
- C. Depends on Software Blades enabled on connected appliances
- D. No licenses are required for Orchestrator

Answer: D

Explanation:

Explanation

Orchestrators in many network environments do not require separate licenses, as they primarily function to manage and distribute network traffic.

NEW QUESTION # 81

HealthCheck Point _____

- A. can be used to let you visualize the Firewall topology for the SG and view live statistics, which includes throughput, problem notes, and CPU utilization.
- B. performs a system health check and is meant to replace both a CPInfo and the health check script.
- C. is a self-updatable suite of tools for SGMs with the capability to assess the health of the system, visualize the Firewall topology, provide a timeline of critical and informative events that might have occurred in a production system
- D. is a self-updatable suite of tools for MHOs with the capability to assess the health of the system and provide a timeline of

critical and informative events that might have occurred in a production system.

Answer: C

Explanation:

HealthCheck Point (HCP) is a tool that can perform various tests and checks on the system components of the Security Group Modules (SGMs), such as hardware, software, network, clock, ARP, and more. It can also display the performance statistics of the SGMs, such as throughput, packet rate, CPU utilization, memory usage, and more. Additionally, HCP can provide a graphical representation of the Firewall topology for the Security Group, showing the connections and statuses of the SGMs and the Orchestrators. Furthermore, HCP can generate a report of the critical and informative events that occurred on the system, such as configuration changes, errors, warnings, and alerts. HCP can help identify and troubleshoot any issues or errors that may affect the system functionality or performance.

NEW QUESTION # 82

There are two 10Gbps dual-port NIC installed on a 6800 appliance. Which interfaces should be connected to Orchestrator 1 for downlinks' intra-orchestrator redundancy when using two Orchestrators?

- **A. Port 1 in Slot 1 and Port 1 in Slot 2**
- B. Port 1 in Slot 2 and Port 2 in Slot 1
- C. Port 1 in Slot 1 and Port 2 in Slot 1
- D. Any pair of available ports

Answer: A

Explanation:

The correct interfaces to connect to Orchestrator 1 for downlinks' intra-orchestrator redundancy when using two Orchestrators are Port 1 in Slot 1 and Port 1 in Slot 2. This is because each slot represents a different NIC, and each port represents a different physical link. By connecting two ports from different slots, the appliance can have redundant connections to the same orchestrator, and avoid a single point of failure in case of a NIC or link failure.

NEW QUESTION # 83

Maestro allows running commands globally in Expert mode by using global prefixes, such as:

- A. global
- **B. g_all**
- C. asg all
- D. all

Answer: B

Explanation:

The g_all prefix is used to run commands globally in Expert mode on all Security Group Members of the current Security Group. For example, g_all cpstop will stop the Check Point services on all SGMs. The other prefixes are not valid for global commands in Expert mode.
