You know, your time is very precious in this fast-paced society. If you only rely on one person's strength, it is difficult for you to gain an advantage. Our NCLEX-RN learning questions will be your most satisfied assistant. On one hand, our NCLEX-RN exam braindumps contain the most important keypoints about the subject which are collected by our professional experts who have been devoting in this career for years. On the other hand, we always keep updating our NCLEX-RN Study Guide to the latest.

NCLEX-RN is a licensing examination for registered nurses in the United States and Canada. It is administered by the National Council of State Boards of Nursing (NCSBN) and is designed to ensure that nurses have the knowledge and skills necessary to provide safe and effective care to patients. NCLEX-RN exam is computer-adaptive, meaning that the difficulty of the questions adapts to the test-taker's level of knowledge. The NCLEX-RN is a comprehensive exam, covering a range of nursing topics such as pharmacology, health promotion, and patient care. Passing the NCLEX-RN is a requirement to obtain a nursing license and practice as a registered nurse in the United States and Canada.

You don't have to worry about passing rates of our NCLEX-RN exam questions because of the short learning time. We have always been trying to shorten your study time on the premise of ensuring the passing rate. Perhaps after you have used NCLEX-RN real exam once, you will agree with this point. Our NCLEX-RN Study Materials are really a time-saving and high-quality product! As long as you buy and try our NCLEX-RN practice braindumps, then you will want to buy more exam materials.

NCLEX-RN exam is widely recognized as one of the most challenging licensure exams in the healthcare industry. Students must undergo extensive preparation and training to pass the exam, including studying nursing concepts and clinical practice, reviewing test-taking strategies, and practicing with sample questions and practice exams.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q272-Q277):

NEW QUESTION # 272

A young boy tells the nurse, "I don't like my Dad to kiss or hug my Mom. I love my Mom and want to marry her." The nurse recognizes this stage of growth and development as:

- A. Electra complex
- **B. Oedipus complex**
- C. Superego
- D. Ego

Answer: B

Explanation:

Explanation

(A) The Electra complex is the erotic attachment of the female child to the father. (B) The Oedipus complex is characterized by jealousy toward the parent of the same sex and erotic attachment to the parent of the opposite sex. (C) The superego as described by Freud is the part of personality that is associated with internalized parental and societal control. (D) The ego as described by Freud is the part of personality that is associated with reality assessment.

NEW QUESTION # 273

A client had a right below-the-knee amputation 4 days ago. He is complaining of pain in his right lower leg. The nurse should:

- **A. Give the client his order of Demerol 50 mg IM prn**
- B. Call the physician to request a psychological consultation for the client
- C. Remind the client that he no longer has that part of his leg and assure him he will be OK
- D. Turn on the television to distract the client's attention from his amputated leg

Answer: A

Explanation:

(A) The nurse is ignoring the client's pain. Telling the client that he will be OK will not relieve his phantom pain. (B) The client does not need a psychological consultation. Phantom pain is a normal sensation experienced by clients with amputations. (C) Using the television as a distractor will not relieve the client's phantom pain. (D) Phantom pain is a normal, very real experience for an amputee and should be treated with pain medication.

NEW QUESTION # 274

Medication is administered to a client who has been placed in restraints after a sudden violent episode, and his EPSs subside. Restraints can be removed when:

- A. The nurse deems that removal of restraints is necessary
- **B. A therapeutic alliance has been established, and violent behavior subsides**
- C. The physician orders it
- D. The violent behavior subsides, and the client agrees to behave

Answer: B

Explanation:

Section: Questions Set F

Explanation:

(A) The physician may order release of restraints, but prior to that, the client must meet criteria for release. (B) While the client is still restrained, but after violent behavior has subsided, a therapeutic bridge is built. This alliance encourages dialogue between nurse and client, allowing the client to determine causative factors, feelings prior to loss of control, and adaptive alternatives to violence. (C) If the client only "agrees to behave" after violent behavior subsides, he has developed no insight into cause and effect of violence or his response to stress. (D) Removal of restraints occurs only when the client meets the criteria for release, not just because the nurse says it is necessary.

NEW QUESTION # 275

A 23-year-old male client is admitted to the chemical dependency unit with a medical diagnosis of alcoholism. He reports that the last time he drank was 3 days ago, and that now he is starting to "feel kind of shaky." Based on the information given above, nursing care goals for this client will initially focus on:

- A. Physiological stabilization
- B. Self-concept problems
- C. Ineffective coping skills
- D. Interpersonal issues

Answer: A

Explanation:

Explanation/Reference:

Explanation:

(A) Self-concept and self-esteem problems may emerge during the client's treatment, but these are not immediate concerns. (B) Interpersonal issues may become evident during the course of the client's treatment, but these are also not immediate areas of concern. (C) Improving individual coping skills is generally a primary focus in the treatment and nursing care of persons with substance abuse problems.

However, this is still not the immediate concern in this client situation. (D) Correction of fluid and electrolyte status and vitamin deficiencies, as well as prevention of delirium, is the immediate concern in the care of this client.

NEW QUESTION # 276

A 9-week-old female infant has a diagnosis of bilateral cleft lip and cleft palate. She has been admitted to the pediatric unit after surgical repair of the cleft lip. Which of the following nursing interventions would be appropriate during the first 24 hours?

- A. Position on side or abdomen.
- B. Clean suture line every shift.
- C. Maintain elbow restraints in place unless she is being directly supervised.
- D. Offer pacifier when she cries.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

(A) Placing the infant on her abdomen may allow for injury to the suture line. (B) Elbow restraints prevent the infant from touching the suture line and yet leaves hands free. (C) The suture line is cleaned as often as every hour to prevent crusting and scarring. (D) Sucking of a bottle or pacifier places pressure on the suture line and may delay healing and cause scarring.

NEW QUESTION # 277
