NEW QUESTION # 228

Consider the following directory:

```
drwxrwxr-x 2 root sales 4096 Jan 1 15:21 sales
```

Which command ensures new files created within the directory sales are owned by the group sales? (Choose two.)

- A. setpol -R newgroup=sales sales
- B. chmod 2775 sales
- C. chown --persistent *.sales sales
- D. chmod g+s sales
- E. chgrp -p sales sales

Answer: B,D

Explanation:

The command `chmod g+s sales` sets the setgid bit on the directory sales, which means that any new file or subdirectory created within sales will inherit the group ownership of the directory. The command `chmod 2775 sales` does the same thing, but also sets the permissions of the directory to `rw-rwxr-x`, which means that the owner, group, and others can read, write, and execute files in the directory. Both commands ensure that new files created within the directory sales are owned by the group sales. The other commands are either invalid or do not affect the group ownership of new files.
