지금 같은 경쟁력이 심각한 상황에서 ISACA AAIA 시험 자격증만 소지한다면 연봉 상승 등 일상 생활에서 많은 도움이 될 것입니다. ISACA AAIA 시험 자격증 소지자들의 연봉은 당연히 ISACA AAIA 시험 자격증이 없는 분들보다 높습니다. 하지만 문제는 ISACA AAIA 시험 패스하기가 너무 힘듭니다. ExamPassdump는 여러분의 연봉 상승을 도와 드리겠습니다.

네트워크 전성기에 있는 지금 인터넷에서 ISACA 인증 AAIA 시험 자료를 많이 검색할 수 있습니다. 하지만 왜 ExamPassdump 덤프 자료만을 믿어야 할까요? ExamPassdump 덤프 자료는 실제 시험 문제의 모든 유형에 근거하여 예상 문제를 묶어둔 문제은행입니다. 시험 적응율이 거의 100%에 달하여 ISACA 인증 AAIA 시험을 한방에 통과하도록 도와드립니다.

>> AAIA 최신 시험 공부자료 <<

## AAIA 적응을 높은 인증덤프, AAIA 최신덤프자료

우리 ExamPassdump에서는 여러분을 위하여 정확하고 우수한 서비스를 제공하였습니다. 여러분의 고민도 덜어드릴 수 있습니다. 빨리 성공하고 빨리 ISACA AAIA 인증 시험을 패스하고 싶으시다면 우리 ExamPassdump를 장바구니에 넣으세요. ExamPassdump는 여러분의 아주 좋은 합습 가이드가 될 것입니다. ExamPassdump로 여러분은 갖고 싶은 인증서를 빠른 시일 내에 얻게 될 것입니다.

## 최신 Advanced in AI Audit AAIA 무료샘플문제 (Q67-Q72):

### 질문 # 67

An organization implements a neural network-based AI system for credit scoring that processes extensive input data from multiple sources. Which of the following represents the GREATEST risk if input validation and anomaly detection controls are inadequate?

- A. Delayed model training cycles from excessive data preprocessing
- **B. Biased inputs that can affect credit decisions**
- C. Increased computational cost due to redundant input checks
- D. Overfitting caused by excessive anomaly filtering

정답: B

### 설명:

In neural network-based credit scoring, the model's complexity often obscures the relationship between specific inputs and final outcomes. If input validation and anomaly detection are weak, "biased inputs" or "noise" from various sources can seep into the training and inference pipelines. According to the ISACA AAIA™ framework, these biased inputs can cause the model to learn discriminatory patterns (e.g., correlations between ethnicity and creditworthiness) that are hidden within large datasets. This leads to unethical and potentially illegal credit decisions. While overfitting (Option B) and costs (Option C) are technical concerns, the systemic risk of automated discrimination via unchecked inputs poses the most significant threat to the organization's legal standing and reputation.

### 질문 # 68

Which of the following is the MOST important consideration for change management related to the organization-wide adoption of AI systems and tools?

- A. Direct involvement from organization senior leadership
- **B. Establishment of organization data governance and infrastructure readiness**
- C. Phased implementation and stringent project stage gates
- D. Implementation of AI-powered systems with shorter user training cycles

정답: B

### 설명:

For organization-wide adoption of AI, the MOST important change management consideration is that the organization has suitable data governance and infrastructure readiness (D). Without robust data governance, AI systems may rely on poor-quality, noncompliant, or insecure data; without appropriate infrastructure (compute, storage, monitoring, integration), implementations will be fragile, unreliable, and risky. AAIA stresses that AI readiness includes governance structures, data stewardship, and technical foundations.

Senior leadership involvement (A) is critical for sponsorship and culture, but even strong leadership cannot compensate for fundamentally inadequate data governance and infrastructure. Option B (shorter training cycles) focuses on user adoption but not core risk and control issues. Option C (phased implementation and stage gates) is good project discipline, but still depends on the underlying readiness. Therefore, from an AI risk and governance perspective, ensuring data governance and infrastructure readiness is the primary prerequisite for successful, safe change management in AI adoption.

### 질문 # 69

During a walk-through, an IS auditor observes an AI engineer entering a prompt that manipulates the AI model's behavior. Which of the following is the BEST control to prevent this?

- A. Encrypt the underlying data
- **B. Enforce an input/output template**
- C. Retrain the model immediately
- D. Deploy adversarial training

정답: B

**설명:**

The most direct and effective control for preventing prompt-based manipulation is to enforce a structured input/output template (option A). AAIA highlights prompt management as a key emerging control area because unstructured prompts can lead to:

- \* Prompt injection
- \* Model manipulation
- \* Circumvention of rules
- \* Unauthorized access to sensitive outputs
- \* Safety violations

Templates constrain user input to predefined formats, reducing opportunities to embed hidden instructions or modify model behavior.

Adversarial training (B) strengthens robustness but does not prevent users from inserting manipulative prompts.

Encryption (C) protects data, not prompt integrity.

Immediate retraining (D) addresses performance, not misuse.

Templates ensure consistent, secure, and auditable prompt structure.

**질문 # 70**

An IS auditor is auditing an organization's data governance framework. The primary objective is to provide assurance that data management practices are standardized to support a trustworthy AI system. Which of the following should be the auditor's MOST important consideration?

- A. Accountability for data management
- B. Portability of data
- C. Data practices for training models
- D. Retention of stored data

**정답: A**

**질문 # 71**

Which of the following is the BEST recommendation to mitigate excessive agency when implementing an AI system as a browser extension?

- A. Remove user access to browser extensions.
- B. Minimize browser extension functionality.
- C. Maximize browser extension functionality.
- D. Use open-source browser extensions.

**정답: B**

**설명:**

Excessive agency occurs when AI systems act too autonomously, making decisions without appropriate human oversight. To mitigate this in a browser extension, the BEST approach is to minimize functionality (A), ensuring the extension performs only narrowly defined, controlled actions. This aligns with AAIA's guidance on limiting AI autonomy, applying least-privilege principles, and restricting unnecessary actions.

Removing user access entirely (B) is overly restrictive. Maximizing functionality (C) increases risk. Open-source extensions (D) improve transparency but do not inherently control excessive agency. Scope limitation is the most targeted and effective mitigation.
