It focuses on optimizing performance, resolving issues, and ensuring data security in data visualization environments.
主題 5	Story Design: This section of the exam measures the skills of Data Analysts and covers story design concepts, accounting for The focus on creating effective visualizations and narratives using data.

最新的 SAP Certified Associate C_SAC_2501 免費考試真題 (Q11-Q16):

問題 #11

You are creating a styling rule for a table with a hierarchy of Country, Region, and City. You want to apply the styling rule only to countries. Which level option must you use?

- A. Self and Siblings
- B. Self and Descendants
- C. Self and Children
- D. Self

答案: D

解題說明:

To apply a styling rule only to countries in a table with a hierarchy of Country, Region, and City in SAP Analytics Cloud, you must use the "Self" level option. This option ensures that the styling rule is applied specifically to the level of the hierarchy representing countries, without affecting the styling of regions, cities, or any other hierarchical levels.

SAP Analytics Cloud User Guide: Hierarchical Styling Options

問題 #12

You have a story in My Files. You want your colleague to review and comment on the story. What must you do?

- A. Create a Review task for the story
- B. Include the story in a Discussion
- C. Add a Comment widget to the story
- D. Share with View access

答案: D

問題 #13

What can you do to reduce the data refresh time when opening a story? Note: There are 3 correct answers to this question.

- A. Use conditional formatting
- B. Use responsive pages
- C. Avoid tables with more than 500 rows and 60 columns
- D. Avoid prompts
- E. Load widgets in the background

答案: A,C,E

問題 #14

You have a story based on an import model. The transaction data in the model's data source changes. How can you update the data in the model? Note: There are 2 correct answers to this question.

- A. Allow model import
- **B. Schedule the import**
- C. Refresh the import job
- **D. Refresh the story**

答案: B,D

解題說明:

To update the data in a model based on an import connection, two main approaches can be used:

Refresh the story: This action forces SAP Analytics Cloud to reload the data for the visualizations in a story, pulling in the most recent data available in the model. This is a manual process initiated by the user.

Schedule the import: This option allows users to set up a recurring data import schedule, ensuring the model is regularly updated with the latest data from the source system. This automated process helps maintain data freshness without manual intervention.

Both methods ensure that the story reflects the most current data, accommodating changes in the transaction data of the model's data source.

問題 #15

What are the available connection types in SAP Analytics Cloud? Note: There are 2 correct answers to this question.

- **A. Import**
- B. On-premise
- C. Cloud
- **D. Live**

答案: A,D

解題說明:

SAP Analytics Cloud supports two primary types of data connections: Live Data Connection and Import Data Connection. Live Data Connection establishes a direct link to the data source, allowing real-time data access without replicating the data into SAP Analytics Cloud. This is ideal for scenarios where up-to-the-minute data is crucial, and data volume is large. On the other hand, Import Data Connection involves copying data from the source into SAP Analytics Cloud, which is suitable for scenarios where data doesn't change frequently, or there's a need for data transformation and enrichment within SAP Analytics Cloud.
