Splunk IT Service Intelligence Certified Admin Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which index is used to store KPI values?

- A. itsi_summary
- B. itsi_service_health
- C. itsi_summary_metrics
- D. itsi_metrics

Answer: C

Explanation:

Explanation

The IT Service Intelligence (ITSI) metrics summary index, itsi_summary_metrics, is a metrics-based summary index that stores KPI data.

NEW QUESTION # 61

There are two departments using ITSI. Finance and Sales. Analysts in each department should not be allowed to see each other's services. What are the role configuration steps required to accomplish this?

- A. itoa_finance_admin, inherited from itoa_admin; itoa_sales_admin, inherited from itoa_team_admin; itoa_finance_analyst, inherited from itoa_team_analyst; itoa_sales_analyst, inherited from itoa_team_analyst.
- B. itoa_finance_admin, inherited from itoa_admin; itoa_sales_admin, inherited from itoa_team_admin; itoa_finance_analyst, inherited from itoa_analyst; itoa_sales_analyst, inherited from itoa_team_analyst.
- C. itoa_finance_admin, inherited from itoa_team_admin; itoa_sales_admin, inherited from itoa_team_admin; itoa_finance_analyst, inherited from itoa_analyst; itoa_sales_analyst, inherited from itoa_analyst.
- D. itoa_finance_admin, inherited from itoa_admin; itoa_sales_admin, inherited from itoa_team_admin; itoa_finance_analyst, inherited from itoa_analyst; itoa_sales_analyst, inherited from itoa_analyst.

Answer: B

Explanation:

C is the correct answer because teams are a feature of ITSI that allow you to restrict access to service content in UI views based on user roles. To create separate teams for finance and sales analysts, you need to create custom roles that inherit from the itoa_analyst role, which has read-only access to ITSI content. For example, you can create itoa_finance_analyst and itoa_sales_analyst roles that inherit from itoa_analyst. Then, you need to create custom teams that include these roles and assign them to the relevant services.

For example, you can create a finance team that includes the itoa_finance_analyst role and assign it to the finance services. Similarly, you can create a sales team that includes the itoa_sales_analyst role and assign it to the sales services. This way, analysts in each department can only see their own services and not each other's. Reference: Create teams in ITSI, Assign teams to services in ITSI

NEW QUESTION # 62

Which index will contain useful error messages when troubleshooting ITSI issues?

- A. _introspection
- B. _internal
- C. itsi_notable_audit
- D. itsi_summary

Answer: B

Explanation:

Reference:

The index that will contain useful error messages when troubleshooting ITSI issues is:

B) _internal. This is true because the _internal index contains logs and metrics generated by Splunk processes, such as splunkd and metrics.log. These logs can help you diagnose problems with your Splunk environment, including ITSI components and features.

The other indexes will not contain useful error messages because:

A) _introspection. This is not true because the _introspection index contains data about Splunk resource usage, such as CPU, memory, disk space, and so on. These data can help you monitor the performance and health of your Splunk environment, but not the error messages.

C) itsi_summary. This is not true because the itsi_summary index contains summarized data for your KPIs and services, such as health scores, severity levels, threshold values, and so on. These data can help you analyze the trends and anomalies of your IT services, but not the error messages.

D) itsi_notable_audit. This is not true because the itsi_notable_audit index contains audit data for your notable events and episodes,

such as creation time, owner

NEW QUESTION # 63

Which ITSI functions generate notable events? (Choose all that apply.)

- A. Multi-KPI alert.
- B. Correlation search.
- C. KPI anomaly detection.
- D. KPI threshold breaches.

Answer: B,C,D

Explanation:

After you configure KPI thresholds, you can set up alerts to notify you when aggregate KPI severities change.

ITSI generates notable events in Episode Review based on the alerting rules you configure.

Anomaly detection generates notable events when a KPI IT Service Intelligence (ITSI) deviates from an expected pattern.

Notable events are typically generated by a correlation search.

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/KPIthresholds>

<https://docs.splunk.com/Documentation/ITSI/4.10.1/SI/AboutSI>

A, B, and D are correct answers because ITSI can generate notable events when a KPI breaches a threshold, when a KPI detects an anomaly, or when a correlation search matches a defined pattern. These are the main ways that ITSI can alert you to potential issues or incidents in your IT environment. References: Configure KPI thresholds in ITSI, Apply anomaly detection to a KPI in ITSI, Generate events with correlation searches in ITSI

NEW QUESTION # 64

Which of the following is a best practice for identifying the most effective services with which to start an iterative ITSI deployment?

- A. Focus on low-level services.
- B. Analyze the business to determine the most critical services.
- C. Only include KPIs if they will be used in multiple services.
- D. Define a large number of key services early.

Answer: B

Explanation:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/MKA>

A best practice for identifying the most effective services with which to start an iterative ITSI deployment is to analyze the business to determine the most critical services that have the most impact on revenue, customer satisfaction, or other key performance indicators. You can use the Service Analyzer to prioritize and monitor these services. References: Service Analyzer

NEW QUESTION # 65

.....
