Interactive Mule-101 EBook & Mule-101 Free Study Material

Allowing for the different bents of exam candidate, we offer three versions of our Mule-101 learning braindumps for you. They are app, software and pdf versions of our Mule-101 training questions. All crucial points are included in the Mule-101 Exam Materials with equivocal contents for your reference with stalwart faith. And we also have the according three free demos of the Mule-101 practice engine for you to download before your purchase.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q49-Q54):

NEW QUESTION # 49

As part of a growth strategy, a supplier signs a trading agreement with a large customer. The customer sends purchase orders to the supplier according to the ANSI X12 EDI standard, and the supplier creates the orders in its ERP system using the information in the EDI document.

- A. Sharing data with external partners
- B. User interface integration
- C. Streaming data ingestion
- D. Data mashups
- E. Synchronized data transfer

Answer: A,E

Explanation:

Context: This scenario describes a classic B2B (Business-to-Business) integration.

Sharing data with external partners (Option C): EDI (Electronic Data Interchange) is the global standard for exchanging business documents (like Purchase Orders) between different organizations (Trading Partners). This fits the "External Partners" criteria perfectly.

Synchronized data transfer (Option B): The requirement is to take data from the incoming source (EDI file) and map/move it into a target system (ERP) to create an order. This process of moving data from System A to System B to keep them consistent is defined

as synchronized data transfer.

NEW QUESTION # 50

A platform architect includes both an API gateway and a service mesh in the architecture of a distributed application for communication management.

- A. Between services within the application
- B. Between the application and external API clients
- C. Between the application and external API implementations
- D. Between application services and the firewall

Answer: A

Explanation:

Service Mesh vs. API Gateway:

API Gateway: Typically manages North-South traffic (traffic entering the application network from external clients).

Service Mesh: Is designed to manage East-West traffic (traffic flowing between microservices within the application network or cluster).

Anyoint Service Mesh: It manages, secures, and observes communication between services within the application (microservices), ensuring zero-trust security and policy enforcement inside the Kubernetes cluster.

NEW QUESTION # 51

A MuleSoft developer must implement an API as a Mule application, run the application locally, and execute unit tests against the running application.

- A. API Manager
- B. Anypoint Studio
- C. Anypoint CLI
- D. API Designer

Answer: B

Explanation:

Anypoint Studio: This is the desktop Integrated Development Environment (IDE) for MuleSoft.

Capabilities:

Implement: It provides the graphical interface to drag-and-drop connectors and configure flows.

Run Locally: It includes an embedded Mule Runtime engine, allowing developers to run and debug apps on their own machines.

Execute Unit Tests: It has MUnit fully integrated, allowing developers to run tests and see coverage reports directly in the IDE.

Why others are incorrect:

API Designer: Web-based tool for designing specs (RAML), not implementing logic or running local runtimes.

Anypoint CLI: Command-line tool for platform operations, not development/testing.

NEW QUESTION # 52

What are two reasons why a typical Mulesoft customer favors a Mulesoft-hosted Anypoint platform runtime plane over a customer-hosted runtime for its Mule application deployments?

- A. Reduced IT operations effort
- B. Reduced application latency
- C. Increased application isolation
- D. Reduced time-to-market for the first application
- E. Increased application throughput

Answer: A,D

Explanation:

MuleSoft-Hosted Runtime (CloudHub): This is an Integration Platform as a Service (iPaaS) model where MuleSoft manages the infrastructure.

Reduced IT Operations Effort (Option A): Because MuleSoft manages the physical servers, operating system updates, and patching.

the customer's IT team does not need to maintain the hardware or VM infrastructure.

Reduced Time-to-Market (Option D): With a pre-configured environment ready for deployment, teams can deploy applications immediately without waiting for the provisioning of on-premises servers, load balancers, or network configurations.

NEW QUESTION # 53

Which role is primarily responsible for building API implementations as part of a typical MuleSoft integration project?

- **A. API Developer**
- B. Integration Architect
- C. API Designer
- D. Operations

Answer: A

Explanation:

API Developer: This role is responsible for the actual coding and implementation of the API. They use Anypoint Studio to build the Mule flows, configure connectors, write DataWeave transformations, and ensure the API functions according to the design specification¹.

Why others are incorrect:

API Designer: Responsible for writing the RAML/OAS contract (specification) in Design Center, usually before implementation begins².

Integration Architect: Responsible for high-level design, pattern selection, and governance, not the day-to-day coding of flows³.

Operations: Responsible for deployment, monitoring, and maintenance after the application is built⁴.

NEW QUESTION # 54

.....

The study system of our company will provide all customers with the best study materials. If you buy the Mule-101 latest questions of our company, you will have the right to enjoy all the Mule-101 certification training materials from our company. More importantly, there are a lot of experts in our company; the first duty of these experts is to update the study system of our company day and night for all customers. By updating the study system of the Mule-101 Training Materials, we can guarantee that our company can provide the newest information about the Mule-101 exam for all people.
