Fortunately, with the Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) certification exam you can do this job nicely and quickly. To do this you just need to enroll in the Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) certification exam and put all your efforts to pass the Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) certification exam.

Salesforce B2C-Commerce-Architect Certification Exam consists of 60 multiple-choice questions and is proctored. B2C-Commerce-Architect exam is timed, and candidates have 105 minutes to complete it. B2C-Commerce-Architect exam is divided into six sections, and each section focuses on a different aspect of B2C Commerce architecture, design, and integration. To pass the exam, candidates must score a minimum of 68%.

## **Salesforce Certified B2C Commerce Architect Sample Questions (Q27-Q32):**

### **NEW QUESTION # 27**

Our client notifies you that the iOS application made a few months ago for some reason now is experiencing a degradation service and some requests take too long to respond. What tool will use it in order to check if there is any issue with OCAPI calls?

- A. Pipeline Profiler filtering results with Extended script development mode.
- **B. Reports & Dashboard under Technical tab.**
- C. Log center filtering by request type OCAPI
- D. Code Profiler

**Answer: B**

### **NEW QUESTION # 28**

An Architect has been approached by the Business with a request to create a custom product finder. The finder would initially be available on only one site, and would eventually be extended to be available on all sites the Business maintains. There is a requirement that these widgets are also available to be used in a Job context for export to other systems.

Each site will have a different category available for use by the product finder.

Where should the Architect store the custom settings for use on both the storefront and in a job context?

- A. Custom Object with a Site Scope
- B. Jobs Framework parameters
- **C. Custom Object with an Organizational Scope**
- D. Category custom attributes

**Answer: C**

Explanation:

To manage custom settings for a product finder that needs to be accessible both on the storefront and in a job context, storing these settings in a Custom Object with an Organizational Scope is most appropriate. This allows the settings to be centralized and accessible across different sites and job contexts, ensuring consistency and reusability of the configurations:

Organizational Scope: Enables settings to be shared across multiple sites without duplicating data, maintaining a single source of truth for configurations that affect various parts of the organization.

Custom Object: Provides the flexibility to define specific attributes and values that are unique to the business requirements of the product finder and other integrations.

#### **NEW QUESTION # 29**

During a review of the most recent release notes, the Architect finds that Salesforce has deprecated an API that is used throughout the site. After reviewing the deprecated API usage in Business Manager, the Architect narrows down the usage of that API to a particular LINK integration cartridge. The cartridge was integrated when the site was first launched and is heavily customized for the Client.

What is the recommended way for the Architect to remove the deprecated API so the LINK integration continues to work without interruptions, and lowest level of effort?

- A. The Architect should contact the company that created the LINK cartridge to fix the issue and provide the client with updated code.
- B. The Architect should update all the deprecated API calls in the already integrated LINK cartridge and test thoroughly.
- C. The Architect does not need to do anything at this time, the API will continue to work with no issues for the foreseeable future.
- **D. The Architect should check to see if the LINK cartridge has been updated already, integrate it, apply the customizations, and test thoroughly.**

**Answer: D**

Explanation:

When facing a deprecated API that is used in a LINK integration cartridge, the recommended approach is to check for an updated version of the cartridge that may have replaced the deprecated API with a supported one.

If an update is available:

\* Integrate the updated cartridge into the site, ensuring compatibility with the current site configuration.

\* Re-apply customizations that were made to the original cartridge to maintain functional consistency.

\* Thorough testing should be conducted to ensure that the integration works seamlessly without causing disruptions in the site's functionality.

This approach minimizes effort by leveraging updates provided by the cartridge vendor while ensuring the site remains functional and compliant with current API standards.

#### **NEW QUESTION # 30**

The Client is growing and decided to migrate its e-commerce website to B2C Commerce. The Client provided the Architect with the metrics for its existing website over the past 12 months and forecasted into the next year:

Average visits per hour	500
Peak visits per hour	1000
Average page views per hour	10000
Peak page views per hour	20000
Average orders per hour	100
Peak orders per hour	250
Average items per order	2.1
Average order value	100 USD
Expected growth percentage	300

Noting these historical metrics and the forecasted growth of 300%, which load test targets meet best practices for testing the new B2C Commerce site?

- A. 150000 visits per hour, 3000000 page views per hour, and 37500 orders per hour
- B. 15000 visits per hour, 300000 page views per hour, and 3750 orders per hour
- C. 3000 visits per hour, 60000 page views per hour, and 750 orders per hour
- D. 1500 visits per hour, 30000 page views per hour, and 375 orders per hour

**Answer: D**

#### NEW QUESTION # 31

Which two activities should an Architect encourage the replication team to follow based on S2C Commerce best practices? Choose 2 answers

- A. Use the undo replication process to roll back code replications only, not data replications.
- B. Wait 15 minutes after the recreation process completes for the cache to clear automatically.
- C. Use the undo replication process to roll back to the previous replication if necessary.
- D. Replicate the latest data to Production during periods of increased site use to ensure freshness.

**Answer: A,C**

Explanation:

Option A (Use the undo replication process to roll back to the previous replication if necessary): This best practice ensures that if a replication introduces errors or issues, there is a way to quickly revert to a previous state without impacting the ongoing operations of the commerce site.

Option C (Use the undo replication process to roll back code replications only, not data replications): Focusing undo operations on code replication rather than data ensures that functional issues caused by code changes can be quickly addressed without affecting the integrity or consistency of the data within the system.

These practices help maintain the stability and reliability of the production environment by providing mechanisms to manage and mitigate risks associated with updates and changes.
