2026 DEP-2025 Authorized Exam Dumps | High Pass-Rate DEP-2025 Demo Test: Apple Deployment and Management Exam 100% Pass

DumpsFree certification training exam for DEP-2025 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development. DumpsFree DEP-2025 certification training exam material including the examination question and the answer, complete by our senior lecturers and the DEP-2025 product experts, included the current newest DEP-2025 examination questions.

Apple DEP-2025 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> • Prepare Your Environment: This section of the exam measures the skills of an IT Administrator and covers the important factors involved in evaluating and preparing the environment for a successful MDM implementation. It emphasizes strategic planning before rollout.
Topic 2	<ul style="list-style-type: none"> • Apple Configurator: This section of the exam measures the skills of an IT Administrator and covers the usage of Apple Configurator in enrollment, supervision, and deployment of Apple devices. It includes an overview of its features and setup processes.
Topic 3	<ul style="list-style-type: none"> • Software Updates: This section of the exam measures the skills of an MDM Specialist and covers update management strategies using MDM. It includes handling deadlines, updating behavior, and ensuring that updates are properly delivered and installed.
Topic 4	<ul style="list-style-type: none"> • Identity Services: This section of the exam measures the skills of an MDM Specialist and covers supported identity services on Apple devices, including Platform SSO and Single Sign-On, helping users manage secure access and authentication.
Topic 5	<ul style="list-style-type: none"> • Network Integration: This section of the exam measures the skills of an IT Administrator and covers assessing network responsiveness and device connectivity. It also covers wireless auto-join behavior on Apple devices and ensures strong network coverage.
Topic 6	<ul style="list-style-type: none"> • Device Configuration: This section of the exam measures the skills of an IT Administrator and covers declarative configuration properties and how they relate to the device enrollment type. It ensures that configurations align with organizational needs.
Topic 7	<ul style="list-style-type: none"> • Device Security: This section of the exam measures the skills of an MDM Specialist and covers encryption on Apple platforms, FileVault operations, and the importance of key management. It focuses on protecting sensitive data on managed devices.
Topic 8	<ul style="list-style-type: none"> • Planning Device Ownership and Enrollment: This section of the exam measures the skills of an IT Administrator and covers enrollment planning strategies based on ownership models. It focuses on data separation and appropriate deployment paths based on user and organizational requirements.

Apple Deployment and Management Exam Sample Questions (Q261-Q266):

NEW QUESTION # 261

Which of these account roles in Apple Business Manager or Apple School Manager can enable federated authentication?

- **A. People Manager**
- B. Authentication Manager
- C. Device Enrollment Manager
- D. Content Manager

Answer: A

Explanation:

Apple defines strict roles and permissions for tasks in Apple Business Manager (ABM) and Apple School Manager (ASM). Federated Authentication requires elevated privileges, as it links your Apple deployment to an identity provider such as Microsoft Entra ID. According to Apple's learning guides, only the roles of Administrator and People Manager can enable and configure federated authentication. Other roles such as Content Manager or Device Enrollment Manager have no authority to make federation-level changes. This restriction ensures only trusted admins with organizational oversight can integrate Apple IDs with external identity systems, minimizing security risk and maintaining compliance.

References: Apple Business Manager User Guide - "Roles and privileges"; Apple Learning - "Federated Authentication."

NEW QUESTION # 262

Which Terminal command can you use to test network responsiveness inside and outside your network?

- **A. networkQuality**

- B. netstat
- C. networksetup
- D. networkUsage

Answer: A

Explanation:

The networkQuality command tests responsiveness. The macOS Deployment Reference states, "Introduced in macOS Monterey, the networkQuality command measures upload and download responsiveness, providing insight into network performance inside and outside your local network." Reference: macOS Deployment Reference, "Network Diagnostics" section. Apple Platform Deployment Guide, "Network Tools" section.

NEW QUESTION # 263

Which of these is a benefit of Platform Single Sign-On (Platform SSO) for macOS?

- **A. Users can synchronize local account credentials with an identity provider (IdP).**
- B. User can leverage IdP passkey support in iCloud Keychain.
- C. Users can get a Federated Managed Apple Account.
- D. Users can turn on Kerberos SSO.

Answer: A

Explanation:

Apple's Platform Single Sign-On (Platform SSO) integrates macOS with modern cloud identity providers such as Microsoft Entra ID or Okta. A primary benefit documented in Apple Learning is the ability for local account credentials to remain synchronized with IdP credentials. This means when a user changes their password at the IdP, the same update flows automatically to their macOS account, preventing mismatched credentials. This eliminates the long-standing issue of password drift seen in older directory-bound workflows. Kerberos SSO is a legacy technology, and federated Managed Apple Accounts are tied to Apple Business Manager, not directly to Platform SSO. IdP passkey integration with iCloud Keychain is a separate security enhancement, not part of Platform SSO. The essential benefit is seamless credential synchronization across local accounts and IdPs. References: Apple Platform Deployment - "Platform Single Sign-On (Platform SSO) for macOS."

NEW QUESTION # 264

What's required to use supervision on a device?

- A. User acceptance
- B. An MDM solution
- C. A VPN configuration
- **D. Apple Configurator or ADE**

Answer: D

Explanation:

Supervision requires Apple Configurator (via USB connection) or Automated Device Enrollment (ADE) through Apple Business Manager (ABM) or Apple School Manager (ASM). These methods apply a supervision identity to the device, enabling advanced management features. An MDM solution (option A) manages supervised devices but isn't the tool for applying supervision. User acceptance (option C) isn't required, as supervision is an administrative action. A VPN configuration (option D) is unrelated. The Apple Platform Deployment Guide specifies these tools for supervision.

NEW QUESTION # 265

Which feature streamlines authentication during account-driven enrollment into MDM?

- **A. Enrollment single sign-on (SSO) for iPhone and iPad**
- B. Biometric authentication
- C. Sign in with Apple at Work & School
- D. Sign in with Apple

Answer: A

Explanation:

Apple introduced Enrollment Single Sign-On (SSO) to simplify the account-driven enrollment workflow.

Normally, users must repeatedly authenticate when setting up device enrollment. With Enrollment SSO, authentication can be completed once, and the credentials are securely passed across enrollment steps. This reduces complexity, prevents password fatigue, and minimizes enrollment errors. Apple Learning materials highlight that this feature is specifically designed for account-driven enrollment on iPhone and iPad, aligning with modern identity provider integrations. Unlike "Sign in with Apple," which is consumer-focused, Enrollment SSO is tailored for enterprise identity workflows with Microsoft Entra, Okta, or Google Workspace.
