NCP-EUC Prep Guide & Latest Updated Test Cram Ensure you High Pass Rate for NCP-EUC: Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Easily

It is not hard to know that Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam torrent prep is compiled by hundreds of industry experts based on the syllabus and development trends of industries that contain all the key points that may be involved in the examination. NCP-EUC guide torrent will never have similar problems, not only because NCP-EUC exam torrent is strictly compiled by experts according to the syllabus, which are fully prepared for professional qualification examinations, but also because NCP-EUC Guide Torrent provide you with free trial services. Before you purchase, you can log in to our website and download a free trial question bank to learn about NCP-EUC study tool.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39
Recently, the vice president Of IT infrastructure was migrated from a physical computer to a virtual desktop. The administrator wants to ensure that this user has the best possible experience and wants to be notified if any CPU resource constraints.
The cluster's average CPU utilization is 20%.
What step would help the administrator to know when there are resource problems on the virtual desktop?

- A. Create a new alert policy to alert if the CPU on the virtual desktop's cluster is over 90%.
- B. Create a new alert policy to alert if the CPU on the virtual desktop is over and configure a Playbook to Slack the

information to the administrator,

- C. Create a new alert policy to alert if the CPU on the virtual desktop is over and configure a Playbook to power off the virtual desktop.
- D. Create a new alert policy to alert if the CPU on the virtual desktop's host is over 90%.

Answer: B

Explanation:
alert policies are rules that define the conditions for generating alerts on Nutanix clusters1. You can create custom alert policies based on your specific needs and preferences2Playbooks are automated workflows that perform actions based on triggers such as alerts3. You can create playbooks using predefined alerts or alerts matching criteria3.
To ensure that the vice president of IT infrastructure has the best possible experience and to be notified if any CPU resource constraints on the virtual desktop, one possible solution is to create a new alert policy to alert if the CPU on the virtual desktop is over a certain threshold (for example, 80%) and configure a playbook to send a notification (for example, via email or Slack) to the administrator23. This way, the administrator can monitor the performance of the virtual desktop and take appropriate actions if needed.

NEW QUESTION # 40
What disaster recovery feature does the Nutanix platform provide in a VMware Horizon environment?

- A. Nutanix is the only vendor that supports replication of linked clones.
- B. Block awareness permits smaller clusters to lose up to four nodes
- C. Nutanix is the only vendor that supports replication of full clones.
- D. Rack awareness permits smaller clusters to lose up to six nodes

Answer: A

Explanation:
Nutanix is the only vendor that supports replication of linked clones. This means that option A is correct.
However, I cannot guarantee the accuracy or validity of this information, so please verify it with other sources before using it.

NEW QUESTION # 41
An administrator needs to create a new MCS Catalog, but is receiving the error:
"Acropolis Inventory: GetContent Exception:System.ArgumentException: Error during serialization or deserialization using the JSON JavaScriptSerializer. The length of the string exceeds the value set on the maxJsonLength property." Running the below command on CVM reveals a large number of snapshots in the cluster:
nutanix@cvm:~$ acli snapshot.list | wc -l
4797
What should the administrator do to resolve the issue?

- A. Uninstall and re-install the Nutanix AHV Plugin for Citrix.
- B. Increase the number of snapshots on the workload cluster.
- C. Upgrade the Nutanix AHV Plugin for Citrix to latest version.
- D. Downgrade the Nutanix AHV Plugin for Citrix to version 2.6.

Answer: C

Explanation:
This error is a known issue related to the Nutanix AHV Plugin for Citrix (MCS plugin) when interacting with a Nutanix cluster that has a high number of snapshots (as indicated by the 4797 count).
Older versions of the plugin utilized a JSON serializer with a default character limit (maxJsonLength). When the plugin attempts to fetch the inventory of snapshots (GetContent) to present them in the Citrix Studio wizard, the resulting JSON string exceeds this limit, causing the serialization exception and failing the catalog creation process.
The resolution, documented in Nutanix/Citrix Knowledge Base articles, is to upgrade the Nutanix AHV Plugin for Citrix to the latest version. Newer versions of the plugin handle large datasets more efficiently (often through pagination or increased limits), allowing the inventory to load successfully despite the large number of existing snapshots.

NEW QUESTION # 42
Which scenario represents the best case for how an organization would deploy non-persistent desktops to their employee and customer base?

- A. High end developers
- B. Application Quality Assurance Testing
- C. Private equity traders
- D. Registration kiosks at a conference

Answer: D

Explanation:
This is because registration kiosks are used by multiple customers who do not need to personalize their desktops or applications, and who only need to perform a specific task such as registering or checking in.
Non-persistent desktops can provide a secure and consistent user experience for these customers, and also reduce management overhead for the organization.

NEW QUESTION # 43
An administrator is using Citrix Studio to configure policies for their existing CVAD environment on to a Nutanix Files share. The administrator would like to use Citrix Director to reset user profiles.
How should the user profiles be configured?

- A. Redirect user's Desktop, Documents and Favorites to a Nutanix Files general share.
- B. use Nutanix Files standard shares
  Deploy Citrix Profile Management user stores inside the user's top-level directory
- C. use Nutanix Files distributed shares.Deploy Citrix Profile Management user stores inside the user's top-level directory.
- D. Redirect user's Desktop, Documents end Favorites to a Nutanix Files home share.

Answer: C

Explanation:
This is because this option will allow the administrator to use Citrix Director to reset user profiles on a Nutanix Files share that provides high performance, scalability, and resilience3.
Citrix Profile Management is a solution that allows administrators to manage user profiles and settings across different devices and sessions12. Nutanix Files is a software-defined file storage solution that provides high performance and scalability for file data12. Nutanix Files supports all forms of profile management with efficient metadata caching techniques that optimize for faster VDI logon times12. Nutanix Files offers two types of shares: standard shares and distributed shares3. Standard shares are hosted on a single file server, while distributed shares are hosted on multiple file servers for load balancing and high availability3.
