## Microsoft 365 Administrator Sample Questions (Q259-Q264):

### NEW QUESTION # 259

You have a Microsoft 365 E5 subscription that contains a user named User1.

The subscription has a single anti-malware policy as shown in the following exhibit.

An email message that contains text and two attachments is sent to User1. One attachment is infected with malware. How will the email message and the attachments be processed?

- A. The malware-infected attachment will be removed. The email message will be quarantined, and User1 will receive a copy of the message containing only the uninfected attachment.
- B. Both attachments will be removed. The email message will be quarantined, and User1 will receive an email message without any attachments and an email message that includes the following text:  
'Malware was removed.'
- C. The email message will be quarantined, and the message will remain undelivered.
- **D. Both attachments will be removed. The email message will be quarantined, and User1 will receive a copy of the message containing the original text and a new attachment that includes the following text:  
'Malware was removed.'**

**Answer: D**

### NEW QUESTION # 260

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain.

You deploy an Azure AD tenant.

Another administrator configures the domain to synchronize to Azure AD.

You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.

You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.

You need to ensure that the 10 user accounts are synchronized to Azure AD.

Solution: From Azure AD Connect, you modify the Azure AD credentials.

Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

Explanation:

The question states that "all the user account synchronizations completed successfully". Therefore, the Azure AD credentials are configured correctly in Azure AD Connect. It is likely that the 10 user accounts are being excluded from the synchronization cycle by a filtering rule.
