- C. Retrieval-augmented agents
- D. Code-based agents

정답: A,C

Retrieval-augmented agents combine generative AI with data retrieval capabilities, enhancing their ability to provide accurate, context-aware responses by accessing enterprise data. "Challenges and benefits of Artificial Intelligence in Cloud ERP can be divided into two main categories: Process-related decision optimization; Productivity and efficiency."learning.sap.com

"These can be divided into two main categories: Process-related decision optimization."learning.sap.com (Implied the second as productivity and efficiency from context.) Other options are incorrect because:

Option C: Process knowledge is not identified as a main category; AI embeds knowledge but categories focus on optimization and efficiency.

Option D: Profitability optimization is a potential outcome but not a primary category; emphasis is on decision and productivity aspects.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: From the SAP Learning course "Positioning SAP Business AI," unit "Summarizing Key Solutions of Business AI," and "Understanding SAP Business AI for SAP S/4HANA Cloud," which categorize AI usage in Cloud ERP as decision optimization and productivity/efficiency, supporting positioning within the SAP Business Suite per C_BCBAI_2502 materials.

질문 # 15

How can SAP Knowledge Graph provide context to AI agents? Note: There are 2 correct answers to this question.

- A. By disambiguating terms, linking concepts to entities, and grounding user conversations in domain-specific knowledge
- B. By validating assumptions and deriving logical conclusions from structured relationships
- C. By using advanced analytics and machine learning capabilities
- D. By connecting data from multiple SAP applications and third-party systems

정답: A,D

설명:

The SAP Knowledge Graph enhances AI agents by providing context, as detailed in SAP Business AI documentation. It achieves this by connecting data from multiple SAP applications and third-party systems, creating a unified data model that ensures comprehensive insights. Additionally, it supports AI agents by disambiguating terms, linking concepts to entities, and grounding user conversations in domain-specific knowledge, enabling precise and relevant responses. While advanced analytics and machine learning are part of SAP's AI capabilities, they are not specific functions of the Knowledge Graph. Validating assumptions is a broader AI function, not a primary role of the Knowledge Graph. These features make it a critical component for contextual AI.
