최신 Certified Logistics Technician CLT 무료샘플문제 (Q114-Q119):

질문 # 114

The basic elements of HAZMAT training required by OSHA for new HAZMAT employees include the following EXCEPT

- A. safety
- **B. Globally Harmonized System**
- C. function specific
- D. general awareness training

정답: B

설명:

The CLT curriculum aligns with OSHA's HAZWOPER / Hazard Communication training; new hazmat employees require general awareness, safety training, and function-specific training (the tasks they'll perform). GHS (Globally Harmonized System) is a chemical classification/labeling standard incorporated into SDS and labeling, but it is not typically listed as a training "element" separate from those core categories in OSHA's training rubric. Thus GHS is integrated but not a separate training element per se. Reference:

질문 # 115

What information would be unnecessary in a packing slip sent with the customer's shipment?

- **A. internal stock adjustments**
- B. the contents of the shipment
- C. the origination of the shipment
- D. any items placed on backorder

정답: A

설명:

A packing slip accompanies outbound shipments and provides a detailed list of what is included in the shipment, its origin, and any backordered items. According to the CLT "Packaging and Shipment" standards, its purpose is to confirm what was shipped and assist the customer in verifying receipt. Internal stock adjustments, however, are warehouse control data related to inventory accounting and are not relevant or appropriate for inclusion on external documents. Including such internal data could cause confusion or reveal proprietary operational details. The CLT emphasizes clear, customer-facing communication—packing slips should reflect only what directly relates to the customer's order fulfillment, ensuring transparency and professionalism in documentation.

질문 # 116

A substance or material that is capable of posing an unreasonable risk to health, safety, and property when transported in commerce is

- A. dangerous goods
- **B. HAZMAT**
- C. PHMSA
- D. HAZCOM

정답: B

설명:

CLT uses the U.S. term "hazardous material (HAZMAT)" for substances posing unreasonable risks in transportation; internationally the term "dangerous goods" is common. PHMSA is the regulating agency within USDOT, and HAZCOM refers to OSHA's Hazard Communication standard, not the material itself. Thus, the definition aligns with HAZMAT.

질문 # 117

When reaching above his or her shoulders to access products on the upper shelves, to avoid causing stress to his or her shoulders and back a worker should

- A. stand on a chair so that the arms are the same height as the item
- B. allow no more than 10 inches between the pallets when products are stocked on high shelves
- C. move lightweight products further away from the edge

- D. move lightweight products closer to the edge prior to lifting

정답: D

설명:

Ergonomics and safe material handling are integral to CLT's "Product Storage" training. When accessing items above shoulder height, workers are instructed to minimize reach and strain by repositioning lighter products closer to the edge before lifting. This practice maintains proper posture, reduces overextension, and prevents musculoskeletal injuries. Standing on chairs is unsafe and violates warehouse safety standards; proper ladders or lifts must be used instead. Shelf spacing (e.g., 10 inches) is not relevant to ergonomic technique. Positioning light items for controlled lifting aligns with CLT principles of efficient, safe storage and retrieval in warehouse environments.

질문 # 118

Because large distribution centers are so efficient, they

- A. maintain a strict schedule for deliveries and shipment
- B. allow unscheduled deliveries only during a certain time window
- C. allow unscheduled deliveries and shipments at any time
- D. process late deliveries without detention costs

정답: A

설명:

High-throughput DCs rely on dock scheduling and appointment adherence to balance labor, doors, equipment, and carrier arrivals. The CLT dispatch/tracking content highlights the need to coordinate inbound and outbound flows, sequence trailer movements, and manage yard/door assignments to maintain productivity and safety. Strict schedules minimize queuing, overtime, and detention risk while keeping pick/pack/ship synchronized. Accepting unscheduled arrivals broadly would disrupt resource plans and can cascade into missed carrier cutoffs. While some sites may provide limited unscheduled windows, the standard is structured dock appointments and adherence. Detention policies are governed by contracts; efficiency does not imply waiving charges.
