100% Pass Quiz 2026 Oracle Trustable 1Z0-1151-25 Valid Test Topics

What's more, part of that DumpsTorrent 1Z0-1151-25 dumps now are free: https://drive.google.com/open?id=1Ez_mhFuLLpR-4OwEGn7tePBc5PBiiKVC

DumpsTorrent also presents desktop-based Oracle 1Z0-1151-25 practice test software which is usable without any internet connection after installation and only required license verification. Oracle 1Z0-1151-25 Practice Test software is very helpful for all those who desire to practice in an actual Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) exam-like environment.

First and foremost, even though our company has become the staunch force in this field for almost ten years and our 1Z0-1151-25 exam questions have enjoyed such a quick sale in the international market we still keep an affordable price for our customers. Second, we have prepared free demo in this website for our customers to have the first-hand experience of the 1Z0-1151-25 Latest Torrent compiled by our company before making their final decision. So do not hesitate any more, just hurry up to buy our 1Z0-1151-25 test question which will never let you down.

>> 1Z0-1151-25 Valid Test Topics <<

1Z0-1151-25 Trustworthy Practice - Updated 1Z0-1151-25 Test Cram

Our 1Z0-1151-25 study materials can help you achieve your original goal and help your work career to be smoother and your family life quality to be better and better. There is no exaggeration to say that you will be confident to take part in you 1Z0-1151-25 exam with only studying our 1Z0-1151-25 practice torrent for 20 to 30 hours. And we can ensure your success for we have been professional in this career for over 10 years. And thousands of candidates have achieved their dreams and ambitions with the help of

our outstanding 1Z0-1151-25 training materials.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 2	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.
Topic 3	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
Topic 4	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.
Topic 5	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q34-Q39):

NEW QUESTION # 34
Which method is NOT a valid approach to scale the Exadata VM Cluster's compute resources?

- A. Using the Oracle Cloud Infrastructure API to programmatically adjust the compute resource allocation.
- B. Leveraging Google Cloud's managed instance groups to automatically scale the number of compute instances in the Exadata VM Cluster.
- C. Manually scaling up or down the number of CPU cores allocated to the cluster's VMs via the OCI Console.
- D. Utilizing OCI's autoscaling functionality through OCI Console that allows for scaling based on performance metrics.

Answer: B

Explanation:
Here's why:
Oracle Database@Google Cloud provides a managed Exadata service within the Google Cloud environment. However, the scaling of the Exadata VM Cluster's compute resources is not directly integrated with Google Cloud's managed instance groups or autoscaling features.
A) Manually scaling up or down the number of CPU cores allocated to the cluster's VMs via the OCI Console: This is not the correct approach in the Oracle Database@Google Cloud context. You do not directly manage the Exadata VM Cluster's CPU cores through the OCI console. Scaling is done through Google Cloud support.

B) Using the Oracle Cloud Infrastructure API to programmatically adjust the compute resource allocation: Similar to option A, directly using the OCI API is not the supported method within Oracle Database@Google Cloud.
D) Utilizing OCI's autoscaling functionality through OCI Console that allows for scaling based on performance metrics: Autoscaling based on metrics is also not available in this integrated environment.
Scaling the compute resources of an Exadata VM Cluster in Oracle Database@Google Cloud requires coordination with Google Cloud support. They handle the underlying infrastructure changes in conjunction with Oracle. You cannot directly manage the scaling via OCI tools or Google Cloud's general-purpose autoscaling mechanisms.

NEW QUESTION # 35
which of the following best describes the location of the Exadata compute and storage infrastructure?

- A. In an OCI pod physically located within the Google Cloud data center, that also contains its own network fabric.
- B. Within Google Cloud's virtual private cloud (VPC) as a managed service.
- C. In a dedicated OCI region that is physically co-located within the Google Cloud data center.
- D. As an extension of the customer's on-premises Exadata infrastructure, connected via a private link.

Answer: A

Explanation:
This accurately describes the physical deployment model. Oracle places a dedicated "OCI pod" within the Google Cloud data center. This pod contains the Exadata hardware (compute and storage servers) and its own dedicated network fabric for internal communication within the Exadata system. This pod is managed by Oracle, even though it resides in a Google Cloud facility.
The other options are incorrect:
The Exadata infrastructure is not within the Google Cloud VPC. It's in its own isolated environment (the OCI pod).
While the pod is in a Google Cloud data center, it's not a full OCI region. It's a smaller, dedicated deployment.
It's not an extension of the customer's on-premises infrastructure.
It's a fully managed cloud service provided by Oracle.

NEW QUESTION # 36
which of the following components is primarily responsible for managing the BGP peering and dynamic route exchange between the two cloud environments?

- A. OCI FastConnect and Google Cloud Partner Interconnect
- B. OCI Dynamic Routing Gateway (DRG) and Google Cloud Virtual Private Cloud (VPC) Network
- C. OCI Virtual Cloud Network (VCN) and Google Cloud Interconnect Attachment
- D. OCI Customer-Premises Equipment (CPE) and Google Cloud Router

Answer: D

Explanation:
While the wording is a little tricky (OCI doesn't require physical CPE in this cloud-to-cloud scenario), the concept is correct. Here's why:
OCI's "CPE" in this context: In a traditional on-premises to OCI FastConnect setup, you would have physical CPE (Customer-Premises Equipment) that terminates the FastConnect connection and establishes BGP sessions with the OCI DRG. In a cloud-to-cloud scenario like Oracle Interconnect for Google Cloud, the function of the CPE is handled by Oracle's network infrastructure at the FastConnect edge. So, conceptually, this is the correct side of the equation.
Google Cloud Router: As discussed previously, the Cloud Router is the Google Cloud component specifically designed for BGP routing. It establishes BGP sessions with the corresponding routing entity on the other side (in this case, the FastConnect connection point on the OCI side, acting as the "CPE").
Why the other options are incorrect:
A). OCI Dynamic Routing Gateway (DRG) and Google Cloud Virtual Private Cloud (VPC) Network: The DRG is the central point for routing within OCI, but it doesn't directly handle the BGP peering with Google Cloud. The FastConnect connection (acting as the "CPE") handles that. The VPC is the overall network construct, not the BGP component.
C). OCI Virtual Cloud Network (VCN) and Google Cloud Interconnect Attachment: The VCN is the OCI network itself, and the Interconnect Attachment is a Layer 2 construct. Neither of these are responsible for BGP.
D). OCI FastConnect and Google Cloud Partner Interconnect: FastConnect is the physical/virtual connection, and Partner Interconnect is the overall service. They facilitate the connection, but the BGP sessions are established by the "CPE" function on the OCI side and the Cloud Router on the Google Cloud side.

NEW QUESTION # 37
Which is a valid statement for a private offer purchase option?

- A. You must have an OCI account to create a private offer.
- B. Raise a purchase private offer directly from Google Cloud Marketplace.
- C. Consult Oracle Sales to create a private offer in OCI Marketplace.
- D. Consult Oracle Sales to create a private offer in Google Cloud Marketplace.

Answer: D

Explanation:
For Oracle Database@Google Cloud, customers consult Oracle Sales to create a private offer in the Google Cloud Marketplace, aligning with the service's GCP integration. Option A incorrectly references OCI Marketplace, Option C misstates account requirements (an OCI account links post-purchase), and Option D skips the sales consultation step. Oracle's purchasing process documentation supports this for GCP-based services.

NEW QUESTION # 38
A company wants to leverage Google Cloud's AI/ML services for analyzing data stored in Oracle Autonomous Database on OCI. Which approach minimizes data egress costs and latency for this multicloud analytics use case?

- A. Export data from Autonomous Database to Google Cloud Storage regularly using Data Pump.
- B. Leverage Oracle Interconnect for Google Cloud to establish a direct, low-latency connection and access Autonomous Database remotely from Google Cloud's AI/ML services.
- C. Use a third-party ETL tool to extract data from Autonomous Database and load it into Google BigQuery.
- D. Use Oracle Data Integration Platform Cloud (DIPC) to replicate the data to a Google Cloud SQL instance.

Answer: B

Explanation:
Here's why:
Oracle Interconnect for Google Cloud: This service provides a dedicated, private connection between OCI and Google Cloud. This direct interconnection minimizes latency significantly compared to transferring data over the public internet. Crucially, it also avoids data egress charges from OCI, as the data remains within the interconnected network. This is the key advantage for cost optimization. By accessing the database remotely, you are processing the data in place, avoiding any transfer costs from OCI.
Why other options are less optimal:
A). Export data from Autonomous Database to Google Cloud Storage regularly using Data Pump: This involves transferring large amounts of data across the public internet, incurring egress costs from OCI. It also introduces latency due to the data transfer process. Regular exports also mean data is not live and can be outdated.
B). Use Oracle Data Integration Platform Cloud (DIPC) to replicate the data to a Google Cloud SQL instance: Similar to option A, this involves data transfer and replication, incurring egress costs from OCI and introducing latency. Maintaining a replicated database also adds complexity and cost.
D). Use a third-party ETL tool to extract data from Autonomous Database and load it into Google BigQuery: This option also requires data extraction and loading, resulting in egress costs from OCI and increased latency. Using a third-party tool also adds another layer of cost and management.

NEW QUESTION # 39
......

Having a Oracle 1Z0-1151-25 certification can enhance your employment prospects,and then you can have a lot of good jobs. DumpsTorrent is a website very suitable to candidates who participate in the Oracle certification 1Z0-1151-25 exam. DumpsTorrent can not only provide all the information related to the Oracle Certification 1Z0-1151-25 Exam for the candidates, but also provide a good learning opportunity for them. DumpsTorrent be able to help you pass Oracle certification 1Z0-1151-25 exam successfully.
