Salesforce Certified B2C Commerce Architect Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which method is efficient and scalable because it uses the product search index rather than searching the database?

- A. `ProduceAvailabilityModel.isOrderable()`
- B. `ProductSearchModel().getProductSearchHits()`
- C. `ProductVariant.getModel().getVariants()`
- D. `ProductIndexModel.getOrderableProductsOnly()`

Answer: B

NEW QUESTION # 56

A developer is checking for Cross Site Scripting (XSS) and found that the quick search is not escaped (allows inclusion of Javascript) in the following script:

How would the developer resolve this issue?

- A. Use `<isprint value="{searchPhrase}" * encoding-'jshtml' />`
- B. Use `<isprint value="{searchPhrase}" encoding-'jsblock' />`
- C. Use `<toprint value="{searchPhrase}" />`
- D. Replace ' with double Quote*

Answer: A

Explanation:

To resolve the issue of Cross Site Scripting (XSS) where the quick search is not escaped, the developer should use the `<isprint>` tag with the 'jshtml' encoding option (Answer B). This method ensures that any JavaScript included in the search phrase is properly escaped, preventing the execution of potentially malicious scripts.

The 'jshtml' encoding is specifically designed to encode text for HTML contexts where JavaScript is embedded, providing a secure way to handle user input in Salesforce B2C Commerce.

NEW QUESTION # 57

During load testing, a third party service is constantly failing to respond in a timely manner on the Product Listing Page. The page is not affected as it is collecting data with the server side call, however the loading time is increasing.

Which two recommendations should the developer take in order to minimize the risk and improve the loading time?

Choose 2 answers

- A. Load the data asynchronously after the page is loaded
- B. Enable the Circuit Breaker.
- C. Decrease the service timeout.
- D. Remove the service.
- E. Ask the third party to improve the reliability of the service.

Answer: A,B

Explanation:

In scenarios where a third-party service impacts page performance, implementing a Circuit Breaker pattern (Option C) can prevent the service from becoming a bottleneck. This pattern helps manage failing service calls by temporarily disabling the service interaction when failures reach a certain threshold, allowing it to recover. Asynchronously loading the data (Option E) ensures the page's primary content loads without delay, while data from the third-party service is fetched in the background, improving the user's perceived performance and page load times.

NEW QUESTION # 58

The storefront integrates with a REST based Address verification service (AVS) that uses token based security. The sequence of calls in the API documentation for this AVS looks like the following

1. Client authentication call, which contains the merchantId and secret in a GET request and returns a token in the response.
2. Address verification call, which contains the token and the address to verify in a POST request.

Once the token is obtained, it is valid for hours and it is not needed to request a new one for subsequent address verification calls, the AVS charges for every request made no matter if it is client authentication call or address verification call.

Which three strategies could be applied to allow for efficient use of the service without compromising security? Choose 3 answers

- A. Apply page caching to the client authentication controller that is used with AJAX.
- B. Use HTTPService caching for the client authentication call.
- C. Obtain the token from local storage of the browser and update it once it expires.
- D. Use a job to store and update the token in a custom object that is used from the storefront code
- E. Obtain the token from a custom cache before making the client authentication call.

Answer: A,B,D

NEW QUESTION # 59

During a review of the most recent release notes, the Architect finds that Salesforce has deprecated an API that is used throughout the site. After reviewing the deprecated API usage in Business Manager, the Architect narrows down the usage of that API to a particular LINK integration cartridge. The cartridge was integrated when the site was first launched and is heavily customized for the Client.

What is the recommended way for the Architect to remove the deprecated API so the LINK integration continues to work without interruptions, and lowest level of effort'

- A. The Architect should update all the deprecated API cats in the already integrated LINK cartridge and test thoroughly.
- B. The Architect should contact the company that created the LINK cartridge to fix the issue and provide the client with updated code.
- C. The Architect does not need to do anything at this time, the API will continue to work with no issues for the foreseeable future.
- **D. The Architect should check to see If the LINK cartridge has been updated already, integrate It, apply the customisations, and teat thoroughly.**

Answer: D

Explanation:

When facing a deprecated API that is used in a LINK integration cartridge, the recommended approach is to check for an updated version of the cartridge that may have replaced the deprecated API with a supported one. If an update is available:

Integrate the updated cartridge into the site, ensuring compatibility with the current site configuration.

Re-apply customizations that were made to the original cartridge to maintain functional consistency.

Thorough testing should be conducted to ensure that the integration works seamlessly without causing disruptions in the site's functionality.

This approach minimizes effort by leveraging updates provided by the cartridge vendor while ensuring the site remains functional and compliant with current API standards.

NEW QUESTION # 60

.....

We will provide you with comprehensive study experience by give you B2C-Commerce-Architect free study material & Salesforce exam prep torrent. The questions & answers from the Salesforce practice torrent are all valid and accurate, made by the efforts of a professional IT team. The authority and validity of Salesforce B2C-Commerce-Architect training practice are the guarantee for all the IT candidates. We arrange our experts to check the update every day. Once there is any new technology about B2C-Commerce-Architect Exam Dumps, we will add the latest questions into the B2C-Commerce-Architect study pdf, and remove the useless study material out, thus to ensure the B2C-Commerce-Architect exam torrent you get is the best valid and latest. So 100% pass is our guarantee.
