EC-COUNCIL 212-89 EC Council Certified Incident Handler (ECIH v3) Exam Questions Get Excellent Scores

Are you tired of feeling overwhelmed and unsure about how to prepare for the 212-89 exam? Are you ready to take control of your future and get the EC Council Certified Incident Handler (ECIH v3) (212-89) certification you need to accelerate your career? If so, it's time to visit ActualTorrent and download real EC-COUNCIL 212-89 Exam Dumps. Our team of experts has designed a 212-89 Exam study material that has already helped thousands of students just like you achieve their goals. We offer a comprehensive EC Council Certified Incident Handler (ECIH v3) (212-89) practice exam material that is according to the content of the 212-89 test.

EC-COUNCIL EC Council Certified Incident Handler (ECIH v3) Sample Questions (Q130-Q135):

NEW QUESTION # 130

Sam, an employee of a multinational company, sends emails to third-party organizations with a spoofed email address of his organization. How can you categorize this type of incident?

- A. Unauthorized access incident.

- B. Denial-of-service incident
- C. Network intrusion incident
- D. Inappropriate usage incident

Answer: D

NEW QUESTION # 131

A self-replicating malicious code that does not alter files but resides in active memory and duplicates itself, spreads through the infected network automatically and takes advantage of file or information transport features on the system to travel independently is called:

- A. Virus
- B. RootKit
- C. Trojan
- D. Worm

Answer: D

NEW QUESTION # 132

Finnis working in the eradication phase, wherein he is eliminating the root cause of an incident that occurred in the Windows operating system installed in a system. He ran a tool that can detect missing security patches and install the latest patches on the system and networks.

Which of the following tools did he use to detect the missing security patches?

- A. Office360 Advanced Threat Protection
- B. Microsoft Baseline Security Analyzer
- C. Microsoft Cloud App Security
- D. Microsoft Advanced Threat Analytics

Answer: B

NEW QUESTION # 133

Racheal is an incident handler working in InceptionTech organization. Recently, numerous employees are complaining about receiving emails from unknown senders. In order to prevent employees against spoofing emails and keeping security in mind, Racheal was asked to take appropriate actions in this matter. As a part of her assignment, she needs to analyze the email headers to check the authenticity of received emails.

Which of the following protocol/authentication standards she must check in email header to analyze the email authenticity?

- A. DKIM
- B. POP
- C. SNMP
- D. ARP

Answer: A

Explanation:

Racheal should check for DKIM (DomainKeys Identified Mail) in the email headers to analyze the authenticity of received emails. DKIM is an email authentication method designed to detect email spoofing. It provides a way for the receiver to check that an email claimed to have come from a specific domain was indeed authorized by the owner of that domain. It achieves this by affixing a digital signature, linked to a domain name, to each outgoing email message. The recipient can verify this signature to confirm that the email was not altered during its transmission and that it indeed comes from the specified domain, thereby helping to prevent email spoofing. Other options like SNMP (Simple Network Management Protocol), POP (Post Office Protocol), and ARP (Address Resolution Protocol) are not directly related to email authenticity checks. References: Incident Handler (ECIH v3) certification materials cover various protocols and standards for ensuring the security and authenticity of communications, including email security protocols like DKIM.

NEW QUESTION # 134

According to NITS, what are the 5 main actors in cloud computing?

- A. None of these
- B. Buyer, consumer, carrier, auditor, and broker
- **C. Consumer, provider, carrier, auditor, and broker**
- D. Provider, carrier, auditor, broker, and seller

Answer: C

Explanation:

According to the National Institute of Standards and Technology (NIST), which is a primary source for cloud computing standards and guidelines, the five main actors in cloud computing are Consumer, Provider, Carrier, Auditor, and Broker. These roles are defined as follows:

* Consumer: The person or organization that uses cloud computing services.

* Provider: The entity that provides the cloud services to consumers.

* Carrier: The organization that offers connectivity and transport services to cloud providers and consumers.

* Auditor: An independent party that assesses and verifies the cloud services, security controls, and operations.

* Broker: An entity that manages the use, performance, and delivery of cloud services, and negotiates relationships between cloud providers and consumers.

These actors play critical roles in the ecosystem of cloud computing, ensuring the services are delivered and used securely, efficiently, and effectively. References: NIST's documentation on cloud computing, including the NIST Cloud Computing Standards Roadmap and the NIST Cloud Computing Reference Architecture, detail these roles and their importance in cloud computing frameworks.

NEW QUESTION # 135

.....

Our evaluation system for 212-89 test material is smart and very powerful. First of all, our researchers have made great efforts to ensure that the data scoring system of our 212-89 test questions can stand the test of practicality. Once you have completed your study tasks and submitted your training results, the evaluation system will begin to quickly and accurately perform statistical assessments of your marks on the 212-89 Exam Torrent. If you encounter something you do not understand, in the process of learning our 212-89 exam torrent, you can ask our staff. We provide you with 24-hour online services to help you solve the problem. Therefore we can ensure that we will provide you with efficient services.
