Newest Detailed XK0-006 Study Dumps & Leading Offer in Qualification Exams & Unparalleled CompTIA CompTIA Linux+ Certification Exam

Maybe you are busy with working every day without the help of our XK0-006 learning materials. The heavy work leaves you with no time to attend to study. It doesn't matter. Our XK0-006 learning materials can help you squeeze your time out and allow you to improve your knowledge and skills while having work experience. And there are three versions of our XK0-006 Exam Questions for you to choose according to your interests and hobbies.

CompTIA Linux+ Certification Exam Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which of the following filesystems contains non-persistent or volatile data?

- A. /boot
- B. /usr
- C. /var
- D. /proc

Answer: D

Explanation:

The /proc filesystem is a virtual filesystem that provides process and kernel information. It is non-persistent and volatile, meaning its contents exist only in memory and are regenerated at each system boot.

NEW QUESTION # 41

A systems administrator needs to open the DNS TCP port on a Linux system from network 10.0.0.0/24. Which of the following commands should the administrator use for this task?

- A. ufw enable 53/tcp from 10.0.0.0/24
- B. ufw allow 53/tcp from 10.0.0.0/24
- C. ufw allow dns/tcp to 10.0.0.0/24
- D. ufw disable from 10.0.0.0/24

Answer: B

Explanation:

The ufw allow 53/tcp from 10.0.0.0/24 command explicitly opens TCP port 53 (DNS) for connections coming from the 10.0.0.0/24 network, which is the correct way to configure this firewall rule.

NEW QUESTION # 42

A systems administrator needs to enable routing of IP packets between network interfaces. Which of the following kernel parameters should the administrator change?

- A. net.ipv4.ip_local_port_range
- B. net.ipv4.ip_multicast
- C. net.ipv4.ip_forward
- D. net.ipv4.ip_route

Answer: C

Explanation:

The net.ipv4.ip_forward kernel parameter controls whether the Linux kernel can forward IP packets between network interfaces, enabling routing functionality when set to 1.

NEW QUESTION # 43

A systems administrator receives reports about connection issues to a secure web server. Given the following firewall and web server outputs:

Firewall output:

```
status: active
To Action From
ComptIA----_
443/tcp DENY Anywhere
443/tcp(v6) DENY Anywhere (v6)
```

Web server output:

```
tcp LISTEN 0 4096 *:443 *:*
```

Which of the following commands best resolves this issue?

- A. ufw allow 4096/tcp
- B. ufw allow 80/tcp
- C. ufw disable
- D. ufw delete deny https/tcp**

Answer: D

Explanation:

The firewall output shows that port 443/tcp (HTTPS) is explicitly denied, even though the web server is correctly listening on it. Removing the deny rule for HTTPS (ufw delete deny https/tcp) resolves the issue while still keeping the firewall active and secure.

NEW QUESTION # 44

An administrator needs to remove the directory /home/user1/data and all of its contents.

Which of the following commands should the administrator use?

- A. rmdir -p /home/user1/data
- B. rm -r /home/user1/data**
- C. cut -d /home/user1/data
- D. ln -d /home/user1/data

Answer: B

Explanation:

The rm -r command recursively removes a directory and all of its contents (files and subdirectories), which is required for deleting /home/user1/data.

NEW QUESTION # 45

.....

As you see, all of the three versions of our XK0-006 exam dumps are helpful for you to get the XK0-006 certification.
