

New CLF-C02 Test Voucher & Pass4sure CLF-C02 Dumps Pdf

2026 Latest FreePdfDump CLF-C02 PDF Dumps and CLF-C02 Exam Engine Free Share: <https://drive.google.com/open?id=1DopbRHa8ofLuYkuwQnlwqYM7cPuCtSOY>

The CLF-C02 torrent prep contains the real questions and simulation questions of various qualifying examinations. It is very worthy of study efficiently. Time is constant development, and proposition experts will set questions of real CLF-C02 exam continuously according to the progress of the society change tendency of proposition, and consciously highlight the hot issues and policy changes. In order to be able to better grasp the proposition thesis direction, the AWS Certified Cloud Practitioner study question focus on proposition which one recent theory and published, in all kinds of academic report even if update to find effective thesis points, according to the proposition of preferences and habits, ponder proposition style of topic selection, to update our CLF-C02 Exam Question, to facilitate users of online learning, better fit time development hot spot.

Amazon CLF-C02 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Cloud Technology and Services: Describe ways to access AWS services in AWS Cloud and explore connectivity options. It deals with defining the global infrastructure of AWS, computing services, and network services.
Topic 2	<ul style="list-style-type: none"> Billing, Pricing, and Support: This section contrasts pricing methods and budgeting resources management. It also tests understanding of billing methods, identifying support options, and technical resources.
Topic 3	<ul style="list-style-type: none"> Cloud Concepts: This section involves knowledge of value proposition and exploring design rules of AWS. It covers the advantages of techniques for moving over to AWS cloud and developing a good understanding of cloud economics.
Topic 4	<ul style="list-style-type: none"> Security and Compliance: This section involves understanding the shared responsibility framework of AWS in addition to compliance and governance. It also involves exploring the management capabilities of AWS by exploring its security capabilities.

Use Amazon CLF-C02 Exam Questions [2026]-Forget About Failure

It is a truth well-known to all around the world that no pains and no gains. There is another proverb that the more you plough the more you gain. When you pass the CLF-C02 exam which is well recognized wherever you are in any field, then acquire the CLF-C02 certificate, the door of your new career will be open for you and your future is bright and hopeful. Our CLF-C02 Guide Torrent will be your best assistant to help you gain your certificate. We believe that you don't encounter failures anytime you want to learn our CLF-C02 guide torrent.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q182-Q187):

NEW QUESTION # 182

What is the purpose of having an internet gateway within a VPC?

- A. To impose bandwidth constraints on internet traffic
- **B. To allow communication between the VPC and the internet**
- C. To load balance traffic from the internet across Amazon EC2 instances
- D. To create a VPN connection to the VPC

Answer: B

Explanation:

An internet gateway is a service that allows for internet traffic to enter into a VPC. Otherwise, a VPC is completely segmented off and then the only way to get to it is potentially through a VPN connection rather than through internet connection. An internet gateway is a logical connection between an AWS VPC and the internet. It supports IPv4 and IPv6 traffic. It does not cause availability risks or bandwidth constraints on your network traffic¹. An internet gateway enables resources in your public subnets (such as EC2 instances) to connect to the internet if the resource has a public IPv4 address or an IPv6 address. Similarly, resources on the internet can initiate a connection to resources in your subnet using the public IPv4 address or IPv6 address². An internet gateway also provides a target in your VPC route tables for internet-routable traffic. For communication using IPv4, the internet gateway also performs network address translation (NAT). For communication using IPv6, NAT is not needed because IPv6 addresses are public². To enable access to or from the internet for instances in a subnet in a VPC using an internet gateway, you must create an internet gateway and attach it to your VPC, add a route to your subnet's route table that directs internet-bound traffic to the internet gateway, ensure that instances in your subnet have a public IPv4 address or an IPv6 address, and ensure that your network access control lists and security group rules allow the desired internet traffic to flow to and from your instance². NEW QUESTION # 183

Which AWS service should be used when a company needs to provide its remote employees with virtual desktops?

- A. AWS Directory Service
- **B. Amazon Workspaces**
- C. AWS IAM Identity Center (AWS Single Sign-On)
- D. Amazon Identity and Access Management (IAM)

Answer: B

Explanation:

The AWS service that should be used when a company needs to provide its remote employees with virtual desktops is Amazon WorkSpaces. Amazon WorkSpaces is a fully managed, secure desktop-as-a-service (DaaS) solution that runs on AWS. Amazon WorkSpaces allows users to provision cloud-based virtual desktops and provide their end users access to the documents, applications, and resources they need from any supported device, including Windows and Mac computers, Chromebooks, iPads, Fire tablets, and Android tablets⁴. Amazon Identity and Access Management (IAM), AWS Directory Service, and AWS IAM Identity Center (AWS Single Sign-On) are other AWS services related to identity and access management, but they do not provide virtual desktops.

NEW QUESTION # 184

A company wants to generate a list of IAM users. The company also wants to view the status of various credentials that are associated with the users, such as password, access keys, and multi-factor authentication (MFA) devices. Which AWS service or feature will meet these requirements?

- A. AWS Identity and Access Management Access Analyzer
- **B. AWS Cost and Usage Report**

- C. AWS IAM Identity Center (AWS Single Sign-On)
- **D. IAM credential report**

Answer: D

Explanation:

An IAM credential report is a feature of AWS Identity and Access Management (IAM) that allows you to view and download a report that lists all IAM users in your account and the status of their various credentials, such as passwords, access keys, and MFA devices. You can use this report to audit the security status of your IAM users and ensure that they follow the best practices for credential management¹. Reference: 1: AWS Documentation - IAM User Guide - Getting credential reports for your AWS account

NEW QUESTION # 185

A company is hosting a web application in a Docker container on Amazon EC2. AWS is responsible for which of the following tasks?

- A. Scaling the web application and services developed with Docker
- B. Provisioning or scheduling containers to run on clusters and maintain their availability
- **C. Performing hardware maintenance in the AWS facilities that run the AWS Cloud**
- D. Managing the guest operating system, including updates and security patches

Answer: C

Explanation:

AWS is responsible for performing hardware maintenance in the AWS facilities that run the AWS Cloud. This is part of the shared responsibility model, where AWS is responsible for the security of the cloud, and the customer is responsible for security in the cloud. AWS is also responsible for the global infrastructure that runs all of the services offered in the AWS Cloud, including the hardware, software, networking, and facilities that run AWS Cloud services³. The customer is responsible for the guest operating system, including updates and security patches, as well as the web application and services developed with Docker⁴.

NEW QUESTION # 186

What can a user accomplish using AWS CloudTrail?

- A. Assess the compliance of AWS resource configurations with policies and guidelines.
- B. Ensure that Amazon EC2 instances are patched with the latest security updates. A company uses Amazon Workspaces.
- **C. Record API calls made to AWS services.**
- D. Generate an IAM user credentials report.

Answer: C

Explanation:

AWS CloudTrail is an AWS service that enables users to accomplish the task of recording API calls made to AWS services. AWS CloudTrail is a service that tracks user activity and API usage across the AWS account.

AWS CloudTrail records the details of every API call made to AWS services, such as the identity of the caller, the time of the call, the source IP address of the caller, the parameters and responses of the call, and more. Users can use AWS CloudTrail to audit, monitor, and troubleshoot their AWS resources and actions.

The other options are incorrect because they are not tasks that users can accomplish using AWS CloudTrail.

Generating an IAM user credentials report is a task that users can accomplish using IAM, which is an AWS service that enables users to manage access and permissions to AWS resources and services. Assessing the compliance of AWS resource configurations with policies and guidelines is a task that users can accomplish using AWS Config, which is an AWS service that enables users to assess, audit, and evaluate the configurations of their AWS resources. Ensuring that Amazon EC2 instances are patched with the latest security updates is a task that users can accomplish using AWS Systems Manager, which is an AWS service that enables users to automate operational tasks, manage configuration and compliance, and monitor system health and performance.
