CAS-004학습자료 & CAS-004적중율 높은 시험대비덤프

Itexamdump는 유일하게 여러분이 원하는CompTIA인증CAS-004시험관련자료를 해결해드릴 수 있는 사이트입니다. Itexamdump에서 제공하는 자료로 응시는 문제없습니다, 여러분은 고득점으로 시험을 통과할 것입니다.

CASP+ 인증은 사이버 보안 분야의 숙련 된 IT 전문가의 기술과 지식을 검증하는 고급 수준 인증입니다. CAS-004 시험은 최신 버전의 인증 시험이며 광범위한 주제를 다룹니다. 시험에 합격하면 사이버 보안에 대한 후보자의 전문 지식을 보여주고 경력 발전 기회로 이어질 수 있습니다.

최신 CompTIA CASP CAS-004 무료샘플문제 (Q493-Q498):

질문 # 493

A company wants to quantify and communicate the effectiveness of its security controls but must establish measures. Which of the

following is MOST likely to be included in an effective assessment roadmap for these controls?

- A. Create an integrated master schedule.
- B. Create a change management process.
- C. Develop a communication plan.
- **D. Establish key performance indicators.**
- E. Perform a security control assessment.

정답: D

설명:

Key Performance Indicators are a formal mechanism designed to measure the effectiveness of a cybersecurity program by defining the crucial goals and desired outcomes of the program.

질문 # 494

A company is outsourcing to an MSSP that performs managed detection and response services. The MSSP requires a server to be placed inside the network as a log aggregator and allows remote access to MSSP analyst. Critical devices send logs to the log aggregator, where data is stored for 12 months locally before being archived to a multitenant cloud. The data is then sent from the log aggregator to a public IP address in the MSSP datacenter for analysis.

A security engineer is concerned about the security of the solution and notes the following.

- * The critical device send cleartext logs to the aggregator.
- * The log aggregator utilize full disk encryption.
- * The log aggregator sends to the analysis server via port 80.
- * MSSP analysis utilize an SSL VPN with MFA to access the log aggregator remotely.
- * The data is compressed and encrypted prior to being archived in the cloud.

Which of the following should be the engineer's GREATEST concern?

- **A. Encryption of data in transit**
- B. Network bridging from a remote access VPN
- C. Hardware vulnerabilities introduced by the log aggregator server
- D. Multitenancy and data remnants in the cloud

정답: A

설명:

Encryption of data in transit should be the engineer's greatest concern regarding the security of the solution. Data in transit refers to data that is being transferred over a network or between devices. If data in transit is not encrypted, it can be intercepted, modified, or stolen by attackers who can exploit vulnerabilities in the network protocols or devices. The solution in the question sends logs from the critical devices to the aggregator in cleartext and from the aggregator to the analysis server via port 80, which are both insecure methods that expose the data to potential attacks. 질문 # 495

A company's human resources department recently had its own shadow IT department spin up ten VMs that host a mixture of differently labeled data types (confidential and restricted) on the same VMs.

Which of the following cloud and visualization considerations would BEST address the issue presented in this scenario?

- A. Vulnerabilities associated with a single platform hosting multiple data types on VMs should have been considered
- **B. Vulnerabilities associated with a single server hosting multiple data types should have been considered.**
- C. Vulnerabilities associated with shared hosting services provided by the IT department should have been considered.
- D. Type 1 vs Type 2 hypervisor approaches should have been considered

정답: B

질문 # 496

The Chief information Officer (CIO) of a large bank, which uses multiple third-party organizations to deliver a service, is concerned about the handling and security of customer data by the parties. Which of the following should be implemented to BEST manage the risk?

- A. Establish a governance program that rates suppliers based on their access to data, the type of data, and how they access the data. Assign key controls that are reviewed and managed based on the supplier's rating. Report finding units that rely on the suppliers and the various risk teams.
- B. Establish a review committee that assesses the importance of suppliers and ranks them according to contract renewals. At the time of contract renewal, incorporate designs and operational controls into the contracts and a right-to-audit clause. Regularly assess the supplier's post-contract renewal with a dedicated risk management team.
- C. Establish an audit program that regularly reviews all suppliers regardless of the data they access, how they access the data, and the type of data. Review all design and operational controls based on best practice standard and report the finding back to upper management.
- D. Establish a team using members from first line risk, the business unit, and vendor management to assess only design security controls of all suppliers. Store findings from the reviews in a database for all other business units and risk teams to reference.

정답: A

설명:

A governance program that rates suppliers based on their access to data, the type of data, and how they access the data is the best way to manage the risk of handling and security of customer data by third parties. This allows the company to assign key controls that are reviewed and managed based on the supplier's rating and report findings to the relevant units and risk teams. Verified References:

질문 # 497

An analyst reviews the following output collected during the execution of a web application security assessment:

```
Start 2022-08-30 12:23:02 -->> 10.5.1.66:443 <--
rDNS (10.5.1.66): HRdatabase.int.comptia.org
Service detected: HTTP
Testing protocols via sockets except NPN+ALPN
SSLv3 not offered (OK)
TLS 1 offered (deprecated)
TLS 1.1 not offered
TLS 1.2 not offered and downgraded to a weaker protocol
TLS 1.3 not offered and downgraded to a weaker protocol
NPN/SPDY not offered
ALPN/HTTP2 not offered
Testing cipher categories
NULL ciphers (no encryption) not offered
Anonymous NULL Ciphers (no authentication) not offered
Export ciphers (w/o ADH+NULL) not offered
LOW: 64 Bit + DES, RC(2,4) (w/o export) not offered
Triple DES Ciphers / IDEA not offered
Obsolete CBC ciphers (AES, ARIA etc.) offered
Strong encryption (AEAD ciphers) not offered
Testing robust (perfect) forward secrecy, (P)FS
No ciphers supporting Forward Secrecy offered
Testing server preferences
Has server cipher order? no
Negotiated protocol TLSv1
Negotiated cipher AES256-SHA (limited sense as client will pick)
```

Which of the following attacks would be most likely to succeed, given the output?

- A. NULL and unauthenticated cipher downgrade attack
- B. On-path forced renegotiation to insecure ciphers
- C. Availability attack from manipulation of associated authentication data
- D. Padding oracle attack

정답: D

설명:

Based on the output in the image, which shows weak cipher suites and vulnerabilities related to encryption padding, the padding oracle attack is the most likely. This type of attack exploits the way padding errors are handled during decryption, potentially allowing an attacker to decrypt sensitive information. The weak cipher suites and lack of forward secrecy further increase the likelihood of such an attack succeeding. CASP+ highlights padding oracle attacks as critical vulnerabilities, particularly in environments where weak encryption protocols are used.
