

SK0-005 Valid Test Answers - Exam SK0-005 Guide

What's more, part of that Prep4King SK0-005 dumps now are free: https://drive.google.com/open?id=10ruYmH_I28XTjypxbC_GZ1SGTFGDs20w

We will continue to pursue our passion for better performance and human-centric technology of latest SK0-005 quiz prep. And we guarantee you to pass the exam for we have confidence to make it with our technological strength. A good deal of researches has been made to figure out how to help different kinds of candidates to get the SK0-005 certification. We have made classification to those faced with various difficulties, aiming at which we adopt corresponding methods to deal with. According to the statistics shown in the feedback chart, the general pass rate for Latest SK0-005 Test Prep is 98%, which is far beyond that of others in this field. In recent years, our SK0-005 exam guide has been well received and have reached 99% pass rate with all our dedication. As one of the most authoritative question bank in the world, our study materials make assurance for your passing the SK0-005 exam.

Worth of CompTIA SK0-005 Certification Exam

CompTIA SK0-005 Certification Exam is a milestone in your career. CompTIA SK0-005 Certification Exam is one of the most widely recognized IT certification exams. If you get CompTIA SK0-005 Certification Exam, it will be a rise in your career. And IT certification has become a necessity. If you want to get a good improvement in your career, The method that using the Prep4King CompTIA SK0-005 exam training materials to obtain a certificate is very feasible. Our exam practice exams are including all the questions which the exam required. So the practice exams will be able to help you to pass the exam.

CompTIA SK0-005 Certification Exam is an important CompTIA certification exam. CompTIA SK0-005 Certification Exam authentication certificate can meet many IT employees' needs. Prep4King expert team has developed the latest short-term effective **CompTIA SK0-005 exam dumps** for CompTIA SK0-005 Certification Exam. After training practice exams they can not only quickly master a lot of knowledge, but also consolidate get the original knowledge.

Exam SK0-005 Guide, Latest SK0-005 Dumps Pdf

Our SK0-005 exam material is full of useful knowledge, which can strengthen your capacity for work. As we all know, it is important to work efficiently. So once you have done your work excellently, you will soon get promotion. You need to be responsible for your career development. The assistance of our SK0-005 guide question dumps are beyond your imagination. You will regret if you throw away the good products. One of the significant advantages of our SK0-005 Exam Material is that you can spend less time to pass the exam. People are engaged in modern society. So our goal is to achieve the best learning effect in the shortest time.

CompTIA Server+ Certification Exam Sample Questions (Q133-Q138):

NEW QUESTION # 133

Which of the following allows for a connection of devices to both sides inside of a blade enclosure?

- A. Passive backplane
- B. Active backplane
- C. Management module
- **D. Midplane**

Answer: D

Explanation:

Explanation

The component that allows for a connection of devices to both sides inside of a blade enclosure is midplane. A midplane is a board or panel that connects two sets of connectors or devices in parallel with each other. A midplane is typically used in blade enclosures or chassis to provide power and data connections between blade servers on one side and power supplies, cooling fans, switches, or management modules on the other side. A midplane can also act as a backplane by providing bus signals or communication channels between devices.

NEW QUESTION # 134

A storage administrator needs to implement SAN-based shared storage that can transmit at 16Gb over an optical connection. Which of the following connectivity options would BEST meet this requirement?

- A. FCoE
- **B. Fibre Channel**
- C. eSATA
- D. iSCSI

Answer: B

Explanation:

Fibre Channel is a connectivity option that can transmit at 16Gb over an optical connection for SAN-based shared storage. Fibre Channel is a high-speed network technology that provides reliable and secure data transfer between servers and storage devices. Fibre Channel uses optical fiber cables to connect devices and supports various topologies and protocols. FCoE is another connectivity option that uses Fibre Channel over Ethernet, which encapsulates Fibre Channel frames into Ethernet packets. FCoE can also transmit at 16Gb over an optical connection, but it requires a converged network adapter (CNA) and a lossless Ethernet network. iSCSI is another connectivity option that uses SCSI commands over IP networks, which can use either copper or optical cables. iSCSI can transmit at 10Gb or 40Gb over an optical connection, but it has higher latency and lower performance than Fibre Channel. eSATA is another connectivity option that uses SATA commands over external cables, which are usually copper. eSATA can transmit at 6Gb over a copper connection, but it has limited cable length and device support compared to Fibre Channel.

NEW QUESTION # 135

A server administrator receives the following output when trying to ping a local host:

Which of the following is MOST likely the issue?

- A. DHCP
- **B. Firewall**
- C. DNS
- D. VLAN

Answer: B

Explanation:

A firewall is a network device or software that filters and controls the incoming and outgoing traffic based on predefined rules. A firewall can block or allow certain types of packets, ports, protocols, or IP addresses. The output of the ping command shows that the local host is unreachable, which means that there is no network connectivity between the source and the destination. This could be caused by a firewall that is blocking the ICMP (Internet Control Message Protocol) packets that ping uses to test the connectivity.

NEW QUESTION # 136

A user logs in to a Linux server and attempts to run the following command:

```
sudo emacs /root/file
```

However the user gets the following message:

User userid is not allowed to execute 'emacs' on this server. Which of the following would BEST allow the user to find out which commands can be used?

- **A. sudo -l -U userid**
- B. cat /etc/passwd
- C. userlist | grep userid
- D. visudo | grep userid

Answer: A

Explanation:

This is the best command to find out which commands can be used by a user with sudo privileges because it lists the allowed and forbidden commands for a given user or role. The -l option stands for list, and the -U option specifies the user name. The output of this command will show what commands can be executed with sudo by that user on that server. Reference:

<https://www.sudo.ws/man/1.8.13/sudo.man.html>

NEW QUESTION # 137

A server administrator is reviewing the following specifications:

VM01 Host:

CPU: 2 Physical, 4 Cores

RAM: 16GB

Storage: 16TB

Server 1 on VM01:

CPU: 1 virtual socket, 1 core per socket

RAM: 4GB

Storage: 8TB

Server 2 on VM01:

CPU: 2 virtual sockets, 2 cores per socket

RAM: 8GB

Storage: 10TB

Which of the following is described given these specifications?

- **A. Overprovisioning**
- B. Virtual switch
- C. Scalability
- D. Host vs. guest

Answer: A

Explanation:

Overprovisioning is a situation where the allocated resources for a virtual machine exceed the available resources of the physical host. In this case, the storage allocated for Server 1 and Server 2 on VM01 is 8TB and 10TB respectively, which adds up to 18TB. However, the storage available on the VM01 host is only 16TB, which means there is a 2TB deficit. This can cause performance issues and errors for the virtual machines.
