Latest and Real C_SEC_2405 Exam Questions in Three User-Friendly Formats

We offer you free update for one year for C_SEC_2405 study guide, namely, in the following year, you can obtain the latest version for free. And the latest version for C_SEC_2405 exam dumps will be sent to your email automatically. In addition, C_SEC_2405 exam materials are high quality, since we have experienced experts to compile and verify them, therefore the quality and accuracy can be guaranteed, so you can use them at ease. We have online and offline chat service, and if you have any questions about C_SEC_2405 Exam Dumps, you can consult us, and we will give you reply as quickly as possible.

SAP C_SEC_2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks.
Topic 2	• Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.
Topic 3	• Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.
Topic 4	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.

SAP Certified Associate - Security Administrator Sample Questions (Q69-Q74):

NEW QUESTION # 69
If you want to evaluate catalog menu entries and authorization default values of IWSG and IWSV applications, which SUIM reports would you use? Note: There are 2 correct answers to this question.

- A. Search Startable Applications in Roles
- B. By Transaction Assignment in Menu
- C. Search Applications in Roles
- D. By Authorization Object

Answer: A,D

Explanation:
To evaluate catalog menu entries and authorization default values for IWSG (SAP Gateway Service Groups Metadata) and IWSV (SAP Gateway Business Suite Enablement-Service) applications, the SUIM (System User Information System) reports "Search Startable Applications in Roles" and "By Authorization Object" are used. The "Search Startable Applications in Roles" report identifies roles that include startable applications, such as IWSG and IWSV, by analyzing menu entries in PFCG roles, providing insight into which applications users can access. The "By Authorization Object" report allows administrators to review authorization objects, including those associated with IWSG and IWSV, and their default values, ensuring that the correct permissions are assigned. These reports are critical for auditing and maintaining secure access to SAP Fiori and Gateway applications. The "Search Applications in Roles" report is less specific, and "By Transaction Assignment in Menu" focuses on transaction codes, not IWSG/IWSV applications, making them unsuitable for this purpose. These tools enhance transparency and control over application access in SAP systems.

NEW QUESTION # 70
Which of the following is part of the SAP S/4HANA central UI component?

- A. SAP Fiori transactional application
- B. SAP Fiori launchpad
- C. SAP Fiori analytical application
- D. SAP Fiori object page

Answer: B

NEW QUESTION # 71
Which object type is assigned to activated OData services in transaction SU24?

- A. G4BA
- B. IWSG
- C. IWSV
- D. HTTP

Answer: C

Explanation:
In SAP systems, activated OData services are assigned the object type IWSV (SAP Gateway Business Suite Enablement-Service) in transaction SU24. SU24 is used to maintain authorization defaults for transactions and services, and for OData services, which power SAP Fiori apps, the IWSV object type represents the service definitions required for front-end and back-end communication. When an OData service is activated, its authorization requirements, such as the S_SERVICE authorization object with the SRV_NAME field, are linked to the IWSV type in SU24, ensuring that these are proposed when the service is added to a PFCG role.
The HTTP object type is not used for OData services, G4BA relates to OData V4 services, and IWSG represents service group metadata, not activated services. By associating OData services with IWSV in SU24, SAP ensures that authorization maintenance is streamlined, enabling secure and efficient access to Fiori apps while aligning with the system's authorization framework.

NEW QUESTION # 72
In the SAP BTP Cockpit, at which level is Trust Configuration available? Note: There are 2 correct answers to this question.

- A. Organization
- B. Directory
- C. Global Account
- D. Subaccount

Answer: C,D

NEW QUESTION # 73
Which of the following services does the Identity Authentication Service provide? Note: There are 2 correct answers to this question.

- A. Single Sign-On
- B. Central User Repository
- C. Policy refinement
- D. Authentication

Answer: A,D

Explanation:
The SAP Identity Authentication Service provides Authentication and Single Sign-On (SSO) services.
Authentication verifies user identities by validating credentials, such as usernames and passwords, or integrating with external identity providers, ensuring secure access to SAP cloud applications. Single Sign-On enables users to access multiple SAP and non-SAP systems with a single set of credentials, streamlining user experience and reducing authentication overhead while maintaining security. These services are core to the Identity Authentication Service's role in SAP's cloud ecosystem, supporting secure and efficient access management. Policy refinement is not a function of this service, as it focuses on policy enforcement rather than creation. A Central User Repository is typically managed by other systems, like SAP Cloud Identity Services, not the Identity Authentication Service. By offering Authentication and SSO, the service ensures robust identity verification and seamless access across cloud-based SAP solutions, aligning with modern security standards and enhancing user productivity.

NEW QUESTION # 74
......

If you still have questions with passing the exam, choose us, and we will help you pass the exam successfully. Our C_SEC_2405 training materials contain the both the questions and answers. You can have a practice through different versions. If you prefer to

practice on paper, then C_SEC_2405 Pdf Version will satisfy you. If you want to have a good command of the C_SEC_2405 exam dumps, you can buy all three versions, which can assist you for practice.
