

Topic 2	<ul style="list-style-type: none"> • Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.
Topic 3	<ul style="list-style-type: none"> • Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
Topic 4	<ul style="list-style-type: none"> • Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.
Topic 5	<ul style="list-style-type: none"> • Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.

Google Chrome-Enterprise-Administrator Questions: Turn Your Exam Fear into Confidence [2026]

This is the Chrome-Enterprise-Administrator PDF format which contains real Chrome-Enterprise-Administrator exam questions. You can print it and make a hard copy of this PDF file as well which helps you to prepare on the go. It comes in handy format and helps you prepare well with updated Professional Chrome Enterprise Administrator Certification Exam exam questions. Moreover, this PDF has questions that are according to the present content of the test. This PDF format helps you to enhance your understanding of each topic which you need to self-evaluate to boost your Google Chrome-Enterprise-Administrator Exam Score.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

An organization relies heavily on Chrome browser for daily operations News breaks about two critical hardware vulnerabilities These vulnerabilities allow attackers to potentially access sensitive information stored in the browser's memory, even across different websites and processes Which specific Chrome Enterprise Core policy would an administrator implement to help mitigate the risks?

- A. Manage Cross-Origin Extensions by Blocking all except an allowlist
- **B. Enable Site isolation for every website**
- C. Require Hardware-backed Key Generation for TLS
- D. Update Chrome browser to the latest stable version

Answer: B

Explanation:

The scenario describes vulnerabilities that could allow cross-site data leakage within the browser's memory.

"Site isolation for every website" is a security feature in Chrome that isolates the rendering process for each website, preventing one site from accessing the data of another, even if a vulnerability is exploited. This policy directly addresses the risk of cross-site information leakage due to memory vulnerabilities. Option A relates to TLS security, option B is a general security best practice but doesn't directly prevent cross-site memory access, and option C manages extension behavior, not core browser memory isolation.

NEW QUESTION # 33

An organization using Chrome browser on Windows has policies from group policy and Chrome Enterprise Core. In what order are the policies applied?

- A. Group policy takes precedence
- **B. By the precedence hierarchy**
- C. From least restrictive to most restrictive
- D. Cloud policy takes precedence

Answer: B

Explanation:

When both Group Policy (local machine policy) and Chrome Enterprise Core (cloud policy) are configured on a Windows device, the effective policy is determined by a defined order of precedence. Generally, cloud policies for managed browsers will override conflicting local policies. The specific precedence order is configurable, but it follows a hierarchical structure where certain policy sources take priority over others.

Options C and D present a simplified view that might not always be the case depending on the configuration.

Option B is a general principle of conflict resolution but doesn't describe the specific order in Chrome policy application.

NEW QUESTION # 34

An administrator wants users to have the ability to install extensions of their choosing. However, due to company security policies, the administrator cannot allow any extension to be installed that has the ability to read documents on the local drive. Which policy combination best meets the administrator's need?

- A. Chrome Webstore: Allow all apps, admin manages blocklist; Runtime Blocked Hosts: file:///*
- **B. Chrome Webstore: Allow all apps, admin manages blocklist; Block extensions by permission: File System**
- C. Chrome Webstore: Allow all apps, admin manages blocklist; Runtime Blocked Hosts: C:*
- D. Chrome Webstore: Block all apps, admin manages allowlist; Block extensions by permission: Sync File System

Answer: B

Explanation:

To allow users to install extensions while blocking those with specific risky permissions, the administrator should "Allow all apps" from the Chrome Web Store and then use the "Block extensions by permission" policy to block extensions that request the "File System" permission. This prevents extensions from accessing local files. Option A is too restrictive by blocking all apps by default. Options B and D use "Runtime Blocked Hosts," which is for controlling access to specific websites, not for blocking extension permissions.

NEW QUESTION # 35

A company is reviewing the permissions of extensions that are popular among employees. The security team wants to make sure all extensions in the environment have these capabilities disabled:

* Modify to internal home page: `internal.acme.com`

* Access to the storage

* Access to history

Which actions should be taken in the company default extension Permissions and URLs fields to meet the security team's requirements?

- A. Add `*.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission
- B. Add `internal.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission
- C. Add `internal.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission
- **D. Add `*.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission**

Answer: D

Explanation:

To prevent extensions from modifying the internal homepage, the administrator should add `*.acme.com` to the "Runtime blocked hosts" list. The wildcard `*` ensures that any attempt to access or modify this domain by an extension will be blocked at runtime. Additionally, to disable access to storage and history, the administrator needs to explicitly disable the "Storage" and "History" permissions within the extension management settings. Therefore, the correct combination is to block the host and disable the

permissions.

NEW QUESTION # 36

A company is managing browsers in the Google Admin console Security has scanned extensions in the organization and has determined that there are several extensions installed with ability to set proxy This violates company policy How would an administrator block these extensions'?

- A. Send an email to the users notifying them that they must uninstall the detected extensions
- B. Remotely connect to each device and delete the extension from the browser
- **C. Set permission policy in the Google Admin console to block such extensions**
- D. Set policy in the Google Admin console to block all extensions from being installed on the browser

Answer: C

Explanation:

The Google Admin console allows administrators to control extension permissions. By configuring the "Permissions and URL access" policy, the administrator can block extensions that request specific permissions, such as the ability to set a proxy. This is a centralized and effective way to enforce the security policy. Remotely connecting to each device (option B) is not scalable. Blocking all extensions (option C) might be too restrictive. Relying on users to uninstall (option D) is not enforceable.

NEW QUESTION # 37

.....

As practice makes perfect, we offer three different formats of Google Chrome-Enterprise-Administrator exam study material to practice and prepare for the Professional Chrome Enterprise Administrator Certification Exam (Chrome-Enterprise-Administrator) exam. Our Google Chrome-Enterprise-Administrator practice test simulates the real Chrome-Enterprise-Administrator exam and helps applicants kill exam anxiety. These Chrome-Enterprise-Administrator practice exams provide candidates with an accurate assessment of their readiness for the Chrome-Enterprise-Administrator test.
