Official Cisco Training for 300-835 Exam

If you're looking for the best resource to prepare for Cisco 300-835, enroll in the official training course. This is a reliable instrument in calibrating your skills in Cisco Collaboration automated and programmable technologies for both cloud and on-premise setup. The course also cultivates your adeptness in working with platforms and processes to capably deal with various communication challenges. Some of the pivotal tools addressed in the lectures are Cisco Unified Communications Manager, Cisco Unity Connection, Cisco Webex Meetings, and Cisco Collaboration Endpoints, among others. In addition, you will obtain insights on the proper usage of APIs interfaces, including REST, SOAP, JSON, XML, and Python.

Uniquely, this training is not all about discussion. It comes with comprehensive lessons accompanied by practical labs to give you the right set of knowledge and technical abilities. For the lectures, these highlight more on the implementation side of automation and programmability that are tailored to the needs of the network infrastructure. In contrast, the hands-on labs largely point out your capacity to streamline, design, and organize web services in accordance with the requirements set by the organization. All these sections are squeeze into 3 days for instructor-led training. Other options include the virtual program led by an instructor that lasts for 3 days, featuring web-based classes and practice labs, or 3 days of self-paced study with E-learning materials.

Cisco Automating and Programming Cisco Collaboration Solutions Sample Questions (Q106-Q111):

NEW QUESTION # 106

Drag and Drop Question

Refer to the exhibit. The beginning of the code is provided. Drag and drop the code snippets from the bottom onto the blanks in the Python script to create a new phone in Cisco UCM using the AXL API. Some options may be used more than once. Not all options are used.

□

Answer:

Explanation:

□

Explanation:

The AXL API operation to create a new phone is addPhone. Since AXL is a SOAP-based API, the Content-Type must be text/xml. The HTTP method used for AXL API operations that create resources is POST, so it's applied twice - once in the payload body element name and once in the request method.

NEW QUESTION # 107

Refer to the exhibit.

□

When a Calling Search Space is updated and a new member is added, how is a member defined?

□
