# Microsoft Administering Windows Server Hybrid Core Infrastructure

## Sample Questions (Q78-Q83):

### NEW QUESTION # 78

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. Group writeback is enabled in Azure AD Connect.

The AD DS domain contains a server named Server1. Server 1 contains a shared folder named share1.

You have an Azure Storage account named storage2 that uses Azure AD-based access control. The storage2 account contains a share named shared. You need to create a security group that meets the following requirements:

- \* Can contain users from the AD DS domain
- \* Can be used to authorize user access to share 1 and share2

What should you do?

- A. in the Azure AD Tenant create a security group that has dynamic membership.
- B. in the Azure AD tenant create a Microsoft 365 group
- C. in the AD DS domain, create a universal security group
- D. in the Azure AD tenant create a security group that has assigned membership

**Answer: C**

### NEW QUESTION # 79

You plan to deploy an Azure virtual machine that will run Windows Server.

You need to ensure that an Azure Active Directory (Azure AD) user named user1@contoso.com can connect to the virtual machine by using the Azure Serial Console.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

### NEW QUESTION # 80

You have an Active Directory Domain Services (AD DS) domain that contains a group named Group1.

You need to create a group managed service account (gMSA) named Account1. The solution must ensure that Group1 can use Account1.

How should you complete the script? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

**Answer:**

### NEW QUESTION # 81

Your company has offices in Boston and Montreal. The offices are connected by using a 10-Mbps WAN link that is often saturated. The office in Boston contains the following:

- \* An Active Directory Domain Services (AD DS) domain controller named DC1.
- \* A server named Server1 that runs Windows Server and has the File Server role installed. The office in Montreal contains 20 client computers that run Windows 10. Montreal does NOT have any servers.

The company plans to deploy a new line of business (LOB) application to all the client computers. The installation source files for the application are in \\Server1\Apps.

**Answer:**
