

# Valid Dumps AI-900 Ebook, Valid AI-900 Exam Test

DOWNLOAD the newest ValidTorrent AI-900 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1K23pVxqsJzKn-94KoPmP-RKm5B5Bif7r>

In the past ten years, our company has never stopped improving the AI-900 exam cram. For a long time, we have invested much money to perfect our products. At the same time, we have introduced the most advanced technology and researchers to perfect our AI-900 exam questions. At present, the overall strength of our company is much stronger than before. We are the leader in the market and master the most advanced technology. In fact, our AI-900 Test Guide has occupied large market shares because of our consistent renovating. We have built a powerful research center and owned a strong team. Up to now, we have got a lot of patents about the AI-900 test guide. In the future, we will continuously invest more money on researching.

Microsoft AI-900: Microsoft Azure AI Fundamentals is a certification exam that validates the foundational knowledge of candidates in the field of artificial intelligence and machine learning. AI-900 exam is designed for individuals who want to gain a basic understanding of AI and its applications in the Azure cloud environment. The AI-900 Exam is an entry-level certification that does not require any prior experience or knowledge in AI.

## Valid AI-900 Exam Test - Learning AI-900 Mode

Considering your various purchasing behaviors, such as practice frequency. Occasion, different digital equivalents, average amount of time on our AI-900 practice materials, we made three versions for your reference, and each has its indispensable favor respectively. All AI-900 guide exam can cater to each type of exam candidates' preferences. The three kinds are PDF & Software & APP version. Besides, we have always been exacting to our service standards to make your using experience better. We are exclusive in AI-900 training prep area, so we professional in practice materials of the test.

## Microsoft Azure AI Fundamentals Sample Questions (Q208-Q213):

### NEW QUESTION # 208

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

A screenshot of a computer Description automatically generated with medium confidence

Box 1: Yes

Custom Vision functionality can be divided into two features. Image classification applies one or more labels to an image. Object detection is similar, but it also returns the coordinates in the image where the applied label(s) can be found.

Box 2: Yes

The Custom Vision service uses a machine learning algorithm to analyze images. You, the developer, submit groups of images that feature and lack the characteristics in question. You label the images yourself at the time of submission. Then, the algorithm trains to this data and calculates its own accuracy by testing itself on those same images.

Box 3: No

Custom Vision service can be used only on graphic files.

**NEW QUESTION # 209**

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

The Azure Text Analytics service, a component of Azure Cognitive Services, provides natural language processing (NLP) capabilities to analyze and understand text-based data. According to the Microsoft Azure AI Fundamentals (AI-900) official study guide and Microsoft Learn module "Identify features and uses for Natural Language Processing (NLP)", the Text Analytics service supports multiple text understanding tasks, such as language detection, key phrase extraction, sentiment analysis, and entity recognition.

\* Language Identification - Yes:Text Analytics can automatically detect the language in which text is written. This feature analyzes linguistic patterns and assigns a language code (for example, "en" for English, "es" for Spanish). It is one of the primary features described in Microsoft Learn as part of the service's Language Detection API.

\* Detect Handwritten Signatures - No:Detecting handwritten signatures is not a text-based NLP task.

Instead, it belongs to the computer vision domain, specifically Optical Character Recognition (OCR).

The Text Analytics service only processes digital text, not handwritten or image-based data. To detect handwriting or signatures, you would use the Computer Vision OCR API, not Text Analytics.

\* Entity Recognition - Yes:The Text Analytics service can identify named entities-such as people, locations, organizations, dates, and quantities-within documents. This is known as Named Entity Recognition (NER), which helps extract structured information from unstructured text.

**NEW QUESTION # 210**

Which two resources can you use to analyze code and generate explanations of code function and code comments? Each correct answer presents a complete solution.

NOTE: Each correct answer is worth one point.

- A. the Azure OpenAI DALL-E model
- B. the Azure OpenAI GPT-4 model
- C. the GitHub Copilot service
- D. the Azure OpenAI Whisper model

**Answer: B,C**

Explanation:

The correct answers are C. the Azure OpenAI GPT-4 model and D. the GitHub Copilot service.

According to the Microsoft Azure AI Fundamentals (AI-900) curriculum and Microsoft Learn documentation on Azure OpenAI and GitHub Copilot, both GPT-4 and GitHub Copilot can be used to analyze and generate explanations for code functionality, as well as produce or refine code comments.

\* Azure OpenAI GPT-4 model (C): The GPT-4 model is a large language model (LLM) developed by OpenAI and available through the Azure OpenAI Service. It is trained on vast amounts of text, including programming languages, documentation, and natural language instructions. This enables it to interpret source code, explain what it does, suggest optimizations, and automatically generate detailed code comments. When prompted with code snippets, GPT-4 can provide structured natural language explanations describing the logic and intent of the code. In enterprise scenarios, developers use Azure OpenAI GPT models for code understanding, review automation, and documentation generation.

\* GitHub Copilot service (D): GitHub Copilot, powered by OpenAI Codex, is an AI coding assistant integrated into IDEs such as Visual Studio Code. It can analyze code context and generate inline comments and explanations in real time. GitHub Copilot understands the syntax and intent of numerous programming languages and provides intelligent suggestions or explanations directly in the developer's environment.

The other options are not suitable:

\* A. DALL-E is a generative image model for creating visual content, not text or code analysis.

\* B. Whisper is an automatic speech recognition (ASR) model used for converting speech to text, unrelated to code interpretation. Therefore, based on the official Azure AI and GitHub documentation, the correct and verified answers are C.

Azure OpenAI GPT-4 model and D. GitHub Copilot service.

### NEW QUESTION # 211

To complete the sentence, select the appropriate option in the answer area.

#### Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/machine-learning/how-to-label-data>

### NEW QUESTION # 212

To complete the sentence, select the appropriate option in the answer area.

#### Answer:

Explanation:
