2026 Testking Mule-Dev-201 Exam Questions 100% Pass | Reliable Mule-Dev-201: Salesforce Certified MuleSoft Developer 100% Pass

all of our Salesforce Mule-Dev-201 exam questions follow the latest exam pattern. We have included only relevant and to-the-point Salesforce Mule-Dev-201 exam questions for the Salesforce Certified MuleSoft Developer exam preparation. You do not need to waste time preparing for the exam with extra or irrelevant outdated Salesforce Mule-Dev-201 exam questions. Employers in multinational companies do not want people who have passed the Mule-Dev-201 Exam but do not understand the Salesforce Mule-Dev-201 exam topics in depth. Our Salesforce Certified Professionals make sure that Mule-Dev-201 exam questions cover all core exam topics, allowing you to better understand the important exam topics.

Salesforce Certified MuleSoft Developer Sample Questions (Q225-Q230):

NEW QUESTION # 225

Which of the below is not a valid category for connector type?

- A. Gold
- B. Select
- C. Community
- D. Premium

Answer: A

Explanation:

Gold is not valid category for connector types.

MuleSoft Doc Ref : <https://docs.mulesoft.com/mule-runtime/3.7/anypoint-connectors#connector-support-categories> Text

Description automatically generated with medium confidence

Connector Type	Description
Community	MuleSoft or members of the MuleSoft community write and maintain the Community connectors. Connectors built by the community or MuleSoft are generally open-source, although each package may vary. Partner-built connectors may not be open-source. Contact the partner directly for more information. You do not need any special account or license to use a Community connector.
MuleSoft Certified	For MuleSoft Certified connectors are developed by MuleSoft's partners and developer community and are reviewed and certified by MuleSoft. For support, customers should contact the MuleSoft partner that created the MuleSoft Certified connector.
Select	MuleSoft maintains Select connectors. Connectors included in the open source Mule distribution can be used by everyone, however support is only included in an Anypoint Platform subscription. To use all other Select Connectors and access support, you must have an active Anypoint Platform subscription.
Premium	MuleSoft maintains Premium connectors; you must have an active CloudHub Premium plan or an Enterprise subscription with an entitlement for the Premium connectors.

NEW QUESTION # 226

Following Mulesoft's recommended API-led connectivity approach, an organization has created an application network. The organization now needs to create API's to transform, orchestrate and aggregate the data provided by the other API's in the application network. This API should be flexible enough to handle the data from additional API's in future.

According to Mulesoft's recommended API-led connectivity approach, what is the best layer for this new API?

- A. Process layer
- B. Data layer
- C. System layer
- D. Experience layer

Answer: A

Explanation:

Correct answer is process layer as all the orchestration and transformation logic should be in process layer as per Mulesoft's recommended approach for API led connectivity.

API-led connectivity is a methodical way to connect data to applications through reusable and purposeful APIs. These APIs are developed to play a specific role - unlocking data from systems, composing data into processes, or delivering an experience.

What are the APIs that enable API-led connectivity?

API-led connectivity provides an approach for connecting and exposing assets. With this approach, rather than connecting things point-to-point, every asset becomes a managed API - a modern API, which makes it discoverable through self-service without losing control.

The APIs used in an API-led approach to connectivity fall into three categories:

System APIs - these usually access the core systems of record and provide a means of insulating the user from the complexity or any changes to the underlying systems. Once built, many users, can access data without any need to learn the underlying systems and can reuse these APIs in multiple projects.

Process APIs - These APIs interact with and shape data within a single system or across systems (breaking down data silos) and are created here without a dependence on the source systems from which that data originates, as well as the target channels through which that data is delivered.

Experience APIs - Experience APIs are the means by which data can be reconfigured so that it is most easily consumed by its intended audience, all from a common data source, rather than setting up separate point-to-point integrations for each channel. An Experience API is usually created with API-first design principles where the API is designed for the specific user experience in mind.

NEW QUESTION # 227

Refer to the exhibit.

A Mule event is composed of a hierarchy of objects. Where in the hierarchy are variables stored?

- A. Mule message
- B. Mule message attributes
- C. Mule message payload
- **D. Mule event**

Answer: D

Explanation:

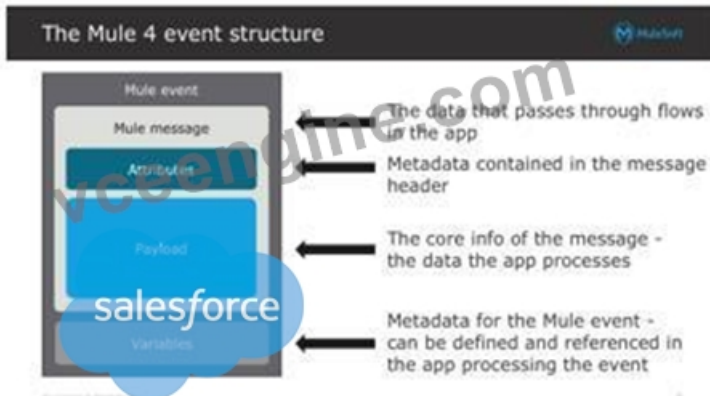

Variables are stored under Mule event. Please refer to below image for the hierarchy .

NEW QUESTION # 228
Refer to the exhibit.

```
#!/RAML 1.0
title: ACME Airlines
version: 1.0

/flows:
  get:
    responses:
      200:
      404:

/airline:
  get:
    queryParameters:
      code: string
    responses:
      200:
      404:

/accounts:
  get:
    responses:
      200:
      404:
  post:
    responses:
      201:
```

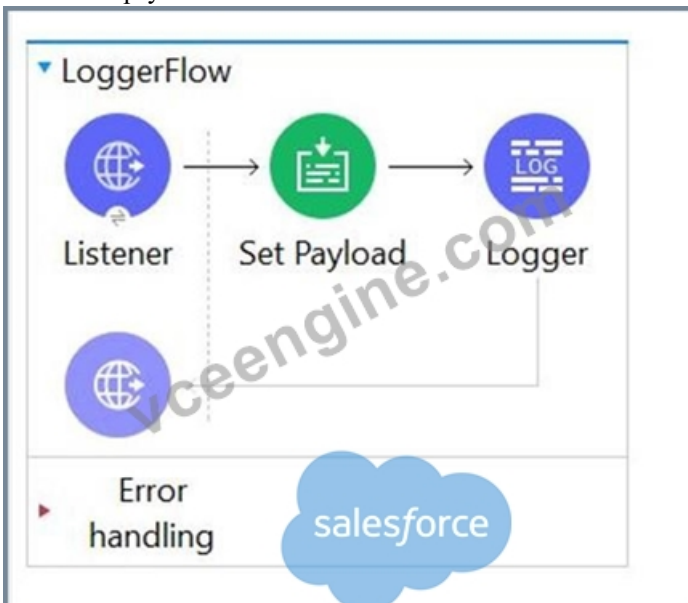

How many private flows does APIKIT generate from the RAML specification?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

NEW QUESTION # 229

Refer to the payload.

```

<flow name="LoggerFlow" doc:id="d5015e61-b3b5-4833-8c5e-ed17603f6cb0" >
  <http:listener doc:name="Listener" doc:id="5ae3d668-7075-4236-a08b03180b53" config-ref="salesforce:listener_config" path="/Log" />
  <set-payload value="#[{
    &#10; "student": {
    &#10;   "name": "Anay",
    &#10;   "age": 6
    &#10; }
  &#10;}]'" doc:name="Set Payload" doc:id="7763301e-1fed-48fc-968d-47e2b113c867" />
  <logger level="INFO" doc:name="Logger" doc:id="801c416b-78bd-44fb-b0db-cd5b3d382c6d" message='Result #[["INFO"++ payload]'" />
</flow>

```

The Set payload transformer sets the payload to an object. The logger component's message attribute is configured with the string "Result #[["INFO"++ payload]" What is the output of logger when this flow executes?

- A. Result INFO{"student":{"name":"Anay","age":6}}
- B. Result INFOpayload
- C. Error : You evaluated inline expression # without ++
- D. 1. 1. "You called the function '++' with these arguments:2. 1: String ("INFO")3. 3: Object ({student: {name: "Anay" as String {class: "java.lang.String"},age: 6 as Numbe...)

Answer: D

Explanation:

Correct answer is as below as concatenation operation works only with string and not with the objects. In this case payload is object.

"You called the function '++' with these arguments:

1: String ("INFO")

2: Object ({student: {name: "Anay" as String {class: "java.lang.String"},age

NEW QUESTION # 230

.....

During nearly ten years, our company has kept on improving ourselves on the Mule-Dev-201 study questions, and now we have become the leader in this field. And now our Mule-Dev-201 training materials have become the most popular Mule-Dev-201 Practice Engine in the international market. There are so many advantages of our Mule-Dev-201 guide quiz, and as long as you have a try on them, you will definitely love our exam dumps.
