At QuestionsTube, you can read HPE7-A01 free demo questions in pdf file, so you can check the questions and answers before deciding to download the HP HPE7-A01 practice questions. These free demo questions are parts of the HPE7-A01 exam questions. Download and read them carefully, you will find that the HPE7-A01 test questions of QuestionsTube will be your great learning materials online. Share some HPE7-A01 exam online questions below.

1. How is Multicast Transmission Optimization implemented in an HPE Aruba wireless network?

P.S. Free & New HPE7-A01 dumps are available on Google Drive shared by ValidDumps: <https://drive.google.com/open?id=18M83O1mBjeh-EGZYOe3V5Vro9wmE5Rco>

HPE7-A01 study materials are the product for global users. Standards in all aspects are also required by international standards. The system designed of HPE7-A01 learning guide by our IT engineers is absolutely safe. Your personal information will never be revealed. And HPE7-A01 actual exam will certainly not covet this small profit and sell your information. HPE7-A01 Study Materials can come today. With so many loyal users, our good reputation is not for nothing. In us, you don't have to worry about information leakage. Selecting a brand like HPE7-A01 learning guide is really the most secure.

HP HPE7-A01 (Aruba Certified Campus Access Professional) Exam is a certification exam designed for IT professionals who work in the field of network infrastructure. HPE7-A01 exam is specifically tailored to assess a candidate's knowledge and skills in designing, implementing, and managing enterprise-level wireless and wired networks using Aruba products and technologies. Passing HPE7-A01 Exam validates the candidate's expertise in configuring Aruba controllers, access points, and switches, as well as their ability to troubleshoot network issues and implement security policies.

HPE7-A01 Certification Questions, Valid HPE7-A01 Test Papers

Are you preparing to take the Aruba Certified Campus Access Professional Exam Exam Questions? Look no further! ValidDumps is your go-to resource for comprehensive HP HPE7-A01 exam questions to help you pass the exam. With ValidDumps, you can access a wide range of features designed to provide you with the right resources and guidance for acing the Aruba Certified Campus Access Professional Exam (HPE7-A01) Exam. Rest assured that ValidDumps is committed to ensuring your success in the HPE7-A01 exam. Explore the various features offered by ValidDumps that will guarantee your success in the exam.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q37-Q42):

NEW QUESTION # 37

Due to a shipping error, five (5) Aruba AP-515S and one (1) Aruba CX 6300 were sent directly to your new branch office. You have configured a new group persona for the new branch office devices in Central, but you do not know their MAC addresses or serial numbers. The office manager is instructed via text message on their smartphone to onboard all the new hardware into Aruba Central. What application must the office manager use on their phone to complete this task?

- A. Aruba CX Mobile App
- B. Aruba Onboard App
- C. Aruba Central App
- D. Aruba installer App

Answer: D

Explanation:

Aruba Installer App is a mobile app that simplifies site installations and enables network connectivity for Aruba devices. The app allows the user to scan the barcode of the device and add it to the network using Aruba Central. The app also automates importing Aruba devices into Aruba NetEdit for intelligent configuration management and continuous conformance validation.

NEW QUESTION # 38

With the Aruba CX switch configuration, what is the Active Gateway feature that is used for and is unique to VSX configuration?

- A. Sixteen different VMACs are supported for each IPv4 and IPv6 stack simultaneously
- B. copied over the ISL link for an optimized path.
- C. Sixteen different VMACs are supported total as shared.
- D. Active Gateway can once MSTP instances are created for VLAN load sharing.

Answer: A

Explanation:

Explanation

The active gateway feature is used to provide active-active layer 3 default gateway for hosts on the same subnet. It allows the switch to convert multicast streams into unicast streams over the wireless link, which improves the quality and reliability of streaming video, while preserving the bandwidth available to the non-video clients. The active gateway feature is unique to VSX configuration because it eliminates the need for VRRP and avoids traffic being pushed over the ISL link, which can cause latency in the network.

The correct answer to the question is C. Sixteen different VMACs are supported for each IPv4 and IPv6 stack simultaneously. This means that you can have a maximum of eight VMACs for IPv4, and a maximum of eight VMACs for IPv6, on a VSX pair. Only 15 VMACs are supported on 6400 switch series.

The other options are incorrect because:

A: Sixteen different VMACs are not supported total as shared. They are supported for each IPv4 and IPv6 stack separately.

B: Active gateway can be used without MSTP instances. MSTP is a protocol that allows multiple spanning tree instances to coexist on the same switch, but it does not affect how active gateway works.

D: Active gateway does not copy traffic over the ISL link for an optimized path. It avoids using the ISL link for routed traffic and uses the local switch interface MAC instead of the virtual MAC address (VMAC) for source address.

NEW QUESTION # 39

What is one advantage of using OCSP vs CRLs for certificate validation?

- A. supports longer certificate validity periods

- B. less complex to implement
- C. higher availability for certificate validation
- D. reduces latency between the time a certificate is revoked and validation reflects this status

Answer: D

Explanation:

OCSP is a protocol that allows clients to query the CA or a trusted responder for the status of a specific certificate. OCSP requests and responses are smaller and faster than CRLs, and they can provide real-time information about the revocation status of a certificate¹². CRLs are lists of all revoked certificates that are downloaded from the CA. CRLs can present issues, as they can become outdated and have to be downloaded frequently¹³. Therefore, OCSP reduces latency between the time a certificate is revoked and validation reflects this status.
