The 2Pass4sure EC-Council Certified Network Defender CND (312-38) PDF questions file contains real and valid EC-COUNCIL 312-38 exam questions that assist you in 312-38 exam dumps preparation and boost the candidate's confidence to pass the challenging EC-Council Certified Network Defender CND (312-38) exam easily.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q414-Q419):

NEW QUESTION # 414
Which of the following statements best describes the consequences of a disaster recovery test?

- A. The test results should be kept secret.
- B. If no deficiencies were found during the test, the test was probably erroneous.
- C. None
- D. If no deficiencies were found during the test, so the plan is probably perfect.
- E. The plan should not change any of the test results would be.

Answer: B

NEW QUESTION # 415
Which phase of incident response process involves collection of incident evidence and sending them to forensic department for further investigation?

- A. Eradication
- B. Incident recording and assignment
- C. Incident containment
- D. Preparation for incident response

Answer: D

NEW QUESTION # 416
Identify the minimum number of drives required to setup RAID level 5.

- A. Multiple
- B. 0
- C. 1
- D. 2

Answer: C

NEW QUESTION # 417
Management wants to calculate the risk factor for their organization. Kevin, a network administrator in the organization knows how to calculate the risk factor. Certain parameters are required before calculating risk factor. What are they? (Select all that apply) Risk factor =.............X...............X...........

- A. Vulnerability
- B. Impact
- C. Attack
- D. Threat

Answer: A,B,D

Explanation:
The risk factor for an organization is typically calculated by considering the potential impact of a threat exploiting a vulnerability. The formula often used is Risk = Threat X Vulnerability X Impact.
This means that for a risk to exist, there must be a threat that could exploit a vulnerability and cause an impact on the organization. An attack is not a parameter in the risk calculation but rather the act that occurs when a threat exploits a vulnerability.

NEW QUESTION # 418
What should a network administrator perform to execute/test the untrusted or untested programs or code from untrusted or unverified third-parties without risking the host system or OS?

- A. Application Blacklisting
- B. Application Sandboxing
- C. Deployment of WAFs
- D. Application Whitelisting

Answer: B

Explanation:
Application sandboxing is a security technique that allows untrusted or untested programs or code to be executed in a separate, restricted environment known as a sandbox. This environment is isolated from the host system and operating system, ensuring that any potential malicious behavior contained within the code cannot affect the host. It's a way to test and execute third-party applications without risking the integrity or security of the main system. Sandboxing provides a tightly controlled set of resources for guest programs to run in, such as scratch space on disk and memory, which prevents the programs from affecting other processes and data on the host system.

NEW QUESTION # 419
......

To take a good control of your life, this 312-38 exam is valuable with high recognition certificate. Actually getting a meaningful certificate by passing related 312-38 exam is also becoming more and more popular. So finding the perfect practice materials is pivotal for it.
