FORTINET FORTIOS ADMINISTRATOR NSE4_FGT_AD-7.6 CERTIFICATION STUDY GUIDE

NSE4_FGT_AD-7.6 Exam Practice Questions

NWEXAM

About your blurry memorization of the knowledge, our NSE4_FGT_AD-7.6 learning materials can help them turn to very clear ones. We have been abiding the intention of providing the most convenient services for you all the time on NSE4_FGT_AD-7.6 study guide, which is also the objection of us. We also have high staff turnover with high morale after-sales staff offer help 24/7. So our customer loyalty derives from advantages of our NSE4_FGT_AD-7.6 Preparation quiz.

Fortinet NSE4_FGT_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Firewall Policies and Authentication: This domain focuses on creating firewall policies, configuring SNAT and DNAT for address translation, implementing various authentication methods, and deploying FSSO for user identification.
Topic 2	<ul style="list-style-type: none">• Routing: This domain covers configuring static routes for packet forwarding and implementing SD-WAN to load balance traffic across multiple WAN links.
Topic 3	<ul style="list-style-type: none">• Deployment and System Configuration: This domain covers initial FortiGate setup, logging configuration and troubleshooting, FGCP HA cluster configuration, resource and connectivity diagnostics, FortiGate cloud deployments (CNF and VM), and FortiSASE administration with user onboarding.
Topic 4	<ul style="list-style-type: none">• VPN: This domain focuses on implementing meshed or partially redundant IPsec VPN topologies for secure connections.

Topic 5	<ul style="list-style-type: none">• Content Inspection: This domain addresses inspecting encrypted traffic using certificates, understanding inspection modes and web filtering, configuring application control, deploying antivirus scanning modes, and implementing IPS for threat protection.

100% Pass Fortinet - The Best Review NSE4_FGT_AD-7.6 Guide

One thing has to admit, more and more certifications you own, it may bring you more opportunities to obtain better job, earn more salary. This is the reason that we need to recognize the importance of getting the test NSE4_FGT_AD-7.6 certifications. More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. Therefore, the NSE4_FGT_AD-7.6 Guide Torrent can help users pass the qualifying examinations that they are required to participate in faster and more efficiently.

Fortinet NSE 4 - FortiOS 7.6 Administrator Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which two statements about equal-cost multi-path (ECMP) configuration on FortiGate are true?
(Choose two.)

- A. If SD-WAN is disabled, you can configure the parameter `v4-ecmp-mode` to volume-based.
- B. If SD-WAN is enabled, you control the load balancing algorithm with the parameter `load-balance-mode`.
- C. If SD-WAN is enabled, you can configure routes with unequal distance and priority values to be part of ECMP.
- D. If SD-WAN is disabled, you configure the load balancing algorithm in config system settings.

Answer: A,B

Explanation:

When SD-WAN is disabled, FortiGate supports volume-based ECMP mode via the `v4-ecmp-mode` parameter.

When SD-WAN is enabled, the load balancing algorithm is controlled by the `load-balance-mode` parameter within the SD-WAN configuration.

NEW QUESTION # 49

Refer to the exhibit.

The exhibit shows the FortiGuard Category Based Filter section of a corporate web filter profile. An administrator must block access to download.com, which belongs to the Freeware and Software Downloads category. The administrator must also allow other websites in the same category. What are two solutions for satisfying the requirement? (Choose two answers)

- A. Configure a separate firewall policy with action Deny and an FQDN address object for *.download.com as destination address.
- B. Configure a static URL filter entry for download.com with Type and Action set to Wildcard and Block, respectively.
- C. Configure a web override rating for download.com and select Malicious Websites as the subcategory.
- D. Set the Freeware and Software Downloads category Action to Warning.

Answer: B,C

Explanation:

"In FortiOS, there are three main components of web filtering:

* Web content filtering..

* URL filtering: uses URLs and URL patterns to block or exempt web pages from specific sources ...

* FortiGuard Web Filtering service..."

"In the web filter profile, Fortiguard category filtering enhances the web filter features. Rather than block or allow websites individually, it looks at the category that a website has been rated with. Then, FortiGate takes action based on that category, not based on the URL."

"If you consider that a particular URL does not have the correct category, you can ask to re-evaluate the rating in the Fortinet URL Rating Submission website. You can also override a web rating for an exceptional URL in the FortiGate configuration. "

"Static URL filtering is another web filter feature, which provides more granularity. Configured URLs in the URL filter are checked from top to bottom against the visited websites. If FortiGate finds a match, it applies the configured action."

"To find the exact match, URL filtering has three pattern types: Simple, Regular Expressions, and Wildcard

."

"So, with these different features, what is the inspection order? If you have enabled many of them, the inspection order flows as follows:

* The local static URL filter

* FortiGuard category filtering..."

Technical Deep Dive:

The correct answers are A and B .

A is correct because a static URL filter gives per-URL granularity. Since the category Freeware and Software Downloads is currently allowed in the profile, adding a local static URL filter entry for download.

com with Block lets FortiGate deny only that site while continuing to allow the rest of the category. This also aligns with the documented inspection order, where the local static URL filter is checked before FortiGuard category filtering .

B is also correct because a web rating override can reclassify a specific exceptional URL. If download.com is re-rated into a

blocked category such as Malicious Websites , it will be blocked by the profile while other sites in Freeware and Software Downloads remain allowed.

Why the others are wrong:

C is not the intended web-filter solution. A firewall policy with an FQDN object operates at policy/routing resolution level, not as a category-aware web filtering exception.

D is wrong because changing the whole category to Warning affects all sites in that category, not just download.com.

In production, the cleaner design is usually: keep the category allowed, then add a local URL-filter exception or a web-rating override for the specific site . For HTTPS traffic, remember FortiGate still needs enough SSL inspection visibility to identify the hostname correctly. A representative CLI approach for URL filtering is:

```
config webfilter urlfilter
```

```
edit 1
```

```
config entries
```

```
edit 1
```

```
set url "download.com"
```

```
set type wildcard
```

```
set action block
```

```
next
```

```
end
```

```
next
```

```
end
```

This is the most deterministic way to block one site without penalizing the rest of the category.

NEW QUESTION # 50

Refer to the exhibits. An administrator configured both members of an HA cluster at the same time. After one week of monitoring, the administrator wants to verify the HA failover performance.

How can the administrator force a failover?

HQ-NGFW-1 HA configuration

```
HQ-NGFW-1 # config system ha
HQ-NGFW-1 (ha) # show
config system ha
  set group-id 5
  set group-name "Training"
  set mode a-p
  set password ENC nmk7zGYiRrux1
  set hbdev "port7" 0
  set session-pickup enable
  set override disable
  set priority 200
  set monitor "port1"
end
```

HQ-NGFW-2 HA configuration

```
HQ-NGFW-2 (ha) # show
config system ha
    set group-id 5
    set group-name "Training"
    set mode a-p
    set password ENC n40G3dmn0K50s
    set hbdev "port7" 0
    set session-pickup enable
    set override disable
    set priority 100
    set monitor "port1"
end
```

- A. The administrator must set the monitored port to down on HQ-NGFW-1.
- B. The administrator must reset the HA uptime on HQ-NGFW-1.
- C. The administrator must increase the HA priority on HQ-NGFW-2.
- D. The administrator must set the parameter override to enable on HQ-NGFW-2.

Answer: A

Explanation:

Both FortiGates are in an active-passive (a-p) HA cluster with override disabled. This means failover is triggered only if the primary (HQ-NGFW-1) becomes unavailable or monitored interfaces fail. To test failover performance, the administrator can set the monitored interface (port1) down on HQ-NGFW-1, which will force a failover to HQ-NGFW-2.

NEW QUESTION # 51

Refer to the exhibits.

Firewall/Network Options

You are asked to implement an antivirus profile for files downloaded through FTP, HTTP, and HTTPS. While testing, you are successful with HTTP and FTP protocols, but FortiGate does not block the file download over HTTPS. What could be the cause?

- A. The feature set in the antivirus profile is not set to Flow-based.
- B. The action on the firewall policy is not set to deny.
- C. The SSL inspection mode in the firewall policy is not deep content inspection.
- D. Web filter is not enabled on the firewall policy to complement the antivirus profile.

Answer: C

Explanation:

The SSL inspection mode in the firewall policy is set to certificate-inspection, which only examines SSL certificates without decrypting HTTPS traffic. Because of this, FortiGate cannot inspect or block files downloaded over HTTPS, as the content remains encrypted. To enable antivirus scanning on HTTPS traffic, the SSL inspection mode must be set to deep-inspection, allowing the FortiGate to decrypt, inspect, and re-encrypt the traffic.

NEW QUESTION # 52

Refer to the exhibit.

Application Name	Result	Policy ID	Destination Interface	SD-WAN Quality	SD-WAN Rule Name
YouTube	✓ Accept (8.08 kB / 27...	1 (DIA)	port2		
YouTube	✓ Accept (UTM Allowed)	1 (DIA)	port2		
Facebook	✓ Accept (UTM Allowed)	1 (DIA)	port1		
Facebook	✓ Accept (UTM Allowed)	1 (DIA)	port1		
Facebook	✓ Accept (3.33 kB / 10...	1 (DIA)	port1		
YouTube	✓ Accept (44.63 kB / 3...	1 (DIA)	port2		
CNN	✓ Accept (UTM Allowed)	1 (DIA)	port1		
CNN	✓ Accept (UTM Allowed)	1 (DIA)	port2		
CNN	✓ Accept (UTM Allowed)	1 (DIA)	port2		

The administrator configured SD-WAN rules and set the FortiGate traffic log page to display SD-WAN-specific columns: SD-WAN Quality and SD-WAN Rule Name. FortiGate allows the traffic according to policy ID 1 placed at the top. This is the policy that allows SD-WAN traffic. Despite these settings, the traffic logs do not show the name of the SD-WAN rule used to steer those traffic flows. What could be the reason?

- A. SD-WAN rule names do not appear immediately. The administrator must refresh the page.
- **B. FortiGate load balanced the traffic according to the implicit SD-WAN rule.**
- C. Destinations in the SD-WAN rules are configured for each application, but feature visibility is not enabled.
- D. There is no application control profile applied to the firewall policy.

Answer: B

Explanation:

In FortiOS 7.6, SD-WAN steering decisions are recorded in traffic logs only when traffic matches an explicit SD-WAN rule (SD-WAN service rule). When no configured SD-WAN rule matches a session, FortiGate uses the implicit (default) SD-WAN rule/behavior to select a member (often resulting in load-balancing or default selection based on the configured SD-WAN algorithm). In the exhibit, traffic is permitted by firewall policy ID 1, and the Destination Interface alternates between port1 and port2, but SD-WAN Rule Name remains empty. This is consistent with the sessions being forwarded by the implicit SD-WAN rule, which does not populate a named rule in the log columns.

Why the other options are not correct:

A: SD-WAN rule name logging is not a "delayed display" behavior requiring refresh; it is populated per-session when an explicit rule matches.

B: Application Control is not required for SD-WAN rule name to appear. Rule name logging depends on SD-WAN rule match, not on whether Application Control is enabled.

C: Feature visibility affects GUI display options, but the exhibit already shows the SD-WAN columns enabled; the issue is that no explicit SD-WAN rule is being hit.

NEW QUESTION # 53

.....

The Fortinet NSE 4 - FortiOS 7.6 Administrator NSE4_FGT_AD-7.6 Questions lead to Fortinet NSE4_FGT_AD-7.6 certification. The NSE4_FGT_AD-7.6 certification is for anyone new to the industry. Whether you have just graduated from college, making a career change, already working in the sector, or searching for new ways to progress, the Fortinet NSE4_FGT_AD-7.6 Certification is ideal for you. If you want to appear in the NSE4_FGT_AD-7.6 test of Fortinet NSE4_FGT_AD-7.6 certification, you should have basic hands-on experience.
