

# Valid Process-Automation exam materials offer you accurate preparation dumps

2026 Die neuesten ZertSoft Process-Automation PDF-Versionen Prüfungsfragen und Process-Automation Fragen und Antworten sind kostenlos verfügbar: <https://drive.google.com/open?id=1-UTflHOT1NbsQKstjNXXLhL2bHOoeIHt>

In vielen Situationen erwerben wir noch keine zufriedenstellende Wirkung, wenn wir viel Geld und Zeit ausgeben. Die richtige Methode spielt eine entscheidende Rolle. Wir ZertSoft Team widmet sich, die beste Methode für Sie zu entwickeln, Salesforce Process-Automation Prüfung zu bestehen. Von dem Punkt, wenn Sie unsere Salesforce Process-Automation Prüfungsunterlagen auswählen, bieten wir Ihnen umfassende Garantien. Kostenlose Probe vor dem Kauf, Zahlungssicherheit beim Kauf, einjährige kostenlose Aktualisierung nach dem Kauf der Salesforce Process-Automation Unterlagen und die volle Rückerstattung für den Durchfall der Salesforce Process-Automation Prüfung usw. Alle zusammen sind unsere Expression der Garantie für die Interesse der Kunden.

Die Prüfungsunterlagen zur Salesforce Process-Automation Zertifizierungsprüfung von ZertSoft werden von der Praxis überprüft. Wir können breite Erforschungen sowie Erfahrungen in der realen Welt bieten. Unser ZertSoft hat mehr als zehnjährige Erfahrungen über Ausbildung, und zwar Fragen und Antworten zur Salesforce Process-Automation Zertifizierungsprüfung. Die Fragenkataloge zur Process-Automation Zertifizierungsprüfung von ZertSoft sind die besten Schulungsunterlagen. Wir bieten Ihnen die umfassendsten Zertifizierungsfragen und Antworten und einen einjährigen kostenlosen Update-Service.

## Die anspruchsvolle Process-Automation echte Prüfungsfragen von uns garantiert Ihre bessere Berufsaussichten!

Tun Sie, was Sie gesagt haben, was Beginn des Erfolgs ist. Weil Sie die schwierige IT-Zertifizierungsprüfung ablegen wollen, sollen Sie sich bemühen, um das Zertifikat zu bekommen. Die Fragenkataloge zur Salesforce Process-Automation Prüfung von ZertSoft sind sehr gut. Mit Ihr können Sie Ihren Erfolg ganz leicht erzielen. Sie sind ganz zuverlässig. Ich glaube, Sie werden die Prüfung 100% bestehen.

## Salesforce Process Automation Accredited Professional Process-Automation Prüfungsfragen mit Lösungen (Q24-Q29):

### 24. Frage

Universal Containers wants to restrict the deletion of closed Opportunity records but allow deletion at other stages. Which option allows for this behavior?

- A. Record-Triggered Flow with invocable Apex
- B. Platform Events
- C. Profile level object permissions
- D. Validation rules

**Antwort: A**

Begründung:

To conditionally restrict deletion of records based on field values (like Opportunity Stage), you must intercept the delete action and stop it when certain criteria are met. This is not achievable through Validation Rules or profile-level permissions (which are all-or-nothing at the object level). The best way to achieve this in Flow is through a Before Delete Record-Triggered Flow that invokes an Apex action to throw a custom error when the condition is met.

D). Correct - A Record-Triggered Flow on delete, combined with invocable Apex, can block deletion based on specific record field values.

Incorrect Options:

A). Profile object permissions cannot apply field-level logic to deletions.

B). Platform Events are not related to deletion restrictions.

C). Validation Rules do not trigger on deletions.

Reference Extracts from Salesforce Process Automation Study Guide:

"To restrict deletion conditionally, use a Before Delete flow with an Apex action that throws an error if conditions are met."

"Validation Rules are not evaluated during delete operations."

## 25. Frage

Which three types of data can a flow variable store?

- A. Text
- B. Multi-Select Picklist
- C. Binary Large Object (BLOB)
- D. Record
- E. Character Large Object (CLOB)

Antwort: A,B,D

Begründung:

In Flow Builder, variables can be created to store a variety of data types. Common supported data types include:

A). Multi-Select Picklist: Supported for storing multiple selected values in a picklist format.

B). Text: One of the most frequently used data types for storing string values.

D). Record: Used to store an entire Salesforce record, either standard or custom object.

Unsupported Types:

C). BLOB: Binary Large Object is not a supported data type in Salesforce Flow.

E). CLOB: Character Large Object is not supported either; this is typically a database concept outside Salesforce.

Reference Extracts from Salesforce Help Documentation on Flow Variables:

"Flow variables can store standard data types like Text, Number, Boolean, Date, Multi-Select Picklists, and Records."

"Variables in Flow cannot store binary or CLOB data."

Reference: Salesforce Help Documentation on Flow and Variables.

## 26. Frage

Which three actions can a business analyst take with a process action?

- A. Send email and/or Post to Chatter.
- B. Create and update the records that started the process or any related record.
- C. Import field values from another record and merge them with the record that started the process
- D. Export up to 3 resources that are currently being used in the flow\* or process.
- E. Submit the record for approval.

Antwort: A,B,E

Begründung:

A business analyst can take the following actions with a process action: A) Submit the record for approval, B) Send email and/or post to Chatter, and D) Create and update the records that started the process or any related record. These actions enable automating business processes such as approvals, communications, and data management directly within the Salesforce platform. Reference: Salesforce Help Documentation on Process Builder Actions.

## 27. Frage

What key feature was introduced in the Spring '21 release that helps with identifying performance issues in Flows and Processes?

- **A. Accurate measure of the CPU time consumption of Flows and Processes**
- B. Stagger and Throttle plug-ins for Flows
- C. Black run-as access for Processes
- D. Optimizer plug-in for Flows and Processes

**Antwort: A**

Begründung:

In the Spring '21 Release, Salesforce introduced a key enhancement that allows Admins and Developers to see the exact CPU time consumed by Flows and Processes. This was added to help identify automation performance bottlenecks and determine which automations are consuming excessive CPU time, which could lead to governor limit violations.

Correct Option:

B). Accurate measure of the CPU time consumption of Flows and Processes - # This enhancement added a more granular breakdown in debug logs for better monitoring.

Incorrect Options:

A). No such official feature as "Stagger and Throttle plug-ins" exists.

C). "Black run-as access" is not a documented or supported Salesforce feature.

D). Optimizer evaluates usage patterns but does not measure CPU time.

Reference Extracts from Salesforce Release Notes Spring '21 - Performance Enhancements:

"In Spring '21, debug logs now show more accurate CPU time usage of Flows and Processes."

## 28. Frage

Universal Containers (UC) is automating its employee offboarding process. Payroll information is stored in an external system. What could UC use to make an automatic update to the payroll system when an employee is offboarded?

- **A. Outbound Message Action**
- B. JSON Auto Connector
- C. Salesforce Handler
- D. API Connect

**Antwort: A**

Begründung:

Outbound Message Actions are part of the declarative automation toolkit in Salesforce (used within Workflow Rules and Flow Builder). They allow Salesforce to send data (in the form of a SOAP message) to an external web service endpoint automatically when specific criteria are met.

D). Correct - Outbound Message Action is a declarative method to push data updates to external systems when a record change occurs (e.g., employee offboarding).

Incorrect Options:

A). Salesforce Handler is not a native automation tool or term in Salesforce.

B). JSON Auto Connector is not an official Salesforce feature.

C). "API Connect" refers to third-party integration platforms, not a native Salesforce feature.

Reference Extracts from Salesforce Process Automation Study Guide:

"Use an Outbound Message to send information to an external web service in response to data changes in Salesforce."

"Outbound Messages allow real-time integration without writing code, using SOAP-based communication."
