Microsoft Power BI Data Analyst Sample Questions (Q10-Q15):

NEW QUESTION # 10
Note: This question is a part of a series of questions that present the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.
Start of repeated scenario
You have a Microsoft SQL Server database that has the tables shown in the Database Diagram exhibit. (Click the Exhibit.)
You plan to develop a Power BI model as shown in the Power BI Model exhibit. (Click the Exhibit).

You plan to use Power BI to import data from 2013 to 2015.
Product Subcategory [Subcategory] contains NULL values.
End of repeated scenario.
You implement the Power BI model.
You need to add a new column to the Product Subcategory table that uses the following formula.
=if [Subcategory] =null then "NA" else [Subcategory]
Which command should you use in Query Editor?

- A. Invoke Custom Function
- B. Custom Column
- C. Conditional Column
- D. Column From Examples

Answer: C

NEW QUESTION # 11
You have a Power BI model that contains a table named Sales. Sales has the following three measures:
A measure named Total Sales Last Year that displays the sales from the previous calendar year. The current value is 32.89 million.
A measure named Total Sales This Year that displays the sales from the current calendar year. The current value is 11.69 million.
A measure named Total Sales Difference that uses a DAX formula of Sales[Last Year] - Sales[This Year].
You need to create the following visualization.
How should you configure the visualization? To answer, drag the appropriate measures to the correct fields. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 12
You have a dataset that has the permissions shown in the following exhibit.
Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation
Answer as selected.

NEW QUESTION # 13
You create a report by using Microsoft Power BI Desktop.
The report uses data from a Microsoft SQL Server Analysis Services (SSAS) cube located on your company's internal network.
You plan to publish the report to the Power BI Service.
What should you implement ta ensure that users who consume the report from the Power BI Service have the most up-to-date data from the cube?

- A. an On-premises data gateway
- B. an OData feed
- C. a scheduled refresh of the dataset
- D. a subscription

Answer: A

Explanation:
Explanation
When you've created dynamic reports in Power BI Desktop, you can share them by publishing to your Power BI site. When you publish a Power BI Desktop file with a live connection to a tabular model to your Power BI site, an on-premises data gateway must be installed and configured by an administrator.

NEW QUESTION # 14
You have the Power BI model shown in the following exhibit.

There are four departments in the Departments table.
You need to ensure that users can see the data of their respective department only.
What should you do?

- A. Create a DepartmentID parameter to filter the Departments table.
- B. Create a slicer that filters Departments based on DepartmentID.
- C. To the ConfidentialData table, add a calculated measure that uses the currentgroup DAX function.
- D. Create a row-level security (RLS) role for each department, and then define the membership of the role.

Answer: D
