2026 100% Free 350-701 –Valid 100% Free Exam Objectives Pdf | Reliable Implementing and Operating Cisco Security Core Technologies Exam Cost

Our 350-701 practice questions are undetected treasure for you if this is your first time choosing them. These advantages help you get a thorough look in details. First of all, the price of our 350-701 exam braindumps is reasonable and affordable, no matter the office staffs or the students can afford to buy them. Secondly, the quality of our 350-701 Study Guide is high. You can just look the pass rate of our 350-701 training quiz, it is high as 98% to 100%.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q481-Q486):

NEW QUESTION # 481

Which solution protects hybrid cloud deployment workloads with application visibility and segmentation?

- A. Stealthwatch
- B. Nexus
- C. Firepower
- **D. Tetration**

Answer: D

Explanation:

Explanation/Reference: <https://www.cisco.com/c/en/us/solutions/security/secure-data-center-solution/index.html#~products>

NEW QUESTION # 482

How does Cisco Advanced Phishing Protection protect users?

- A. It utilizes sensors that send messages securely.
- B. It uses machine learning and real-time behavior analytics.
- **C. It determines which identities are perceived by the sender**
- D. It validates the sender by using DKIM.

Answer: C

Explanation:

Cisco Advanced Phishing Protection provides sender authentication and BEC detection capabilities. It uses advanced machine learning techniques, real-time behavior analytics, relationship modeling, and telemetry to protect against identity deception-based threats.

NEW QUESTION # 483

Which proxy mode must be used on Cisco WSA to redirect TCP traffic with WCCP?

- A. redirection
- B. proxy gateway
- **C. transparent**
- D. forward

Answer: C

Explanation:

There are two possible methods to accomplish the redirection of traffic to Cisco WSA: transparent proxy mode and explicit proxy mode.

In a transparent proxy deployment, a WCCP v2-capable network device redirects all TCP traffic with a destination of port 80 or 443 to Cisco WSA, without any configuration on the client. The transparent proxy deployment is used in this design, and the Cisco ASA firewall is used to redirect traffic to the appliance because all of the outbound web traffic passes through the device and is generally managed by the same operations staff who manage Cisco WSA.

NEW QUESTION # 484

Why would a user choose an on-premises ESA versus the CES solution?

- A. The server team wants to outsource this service.
- B. ESA is deployed inline.
- **C. Sensitive data must remain onsite.**
- D. Demand is unpredictable.

Answer: C

Explanation:

One of the main reasons why a user would choose an on-premises ESA versus the CES solution is to have more control over the sensitive data that flows through the email system. With an on-premises ESA, the user can ensure that the data is stored and

processed within their own network and data center, and that they comply with any regulatory or organizational requirements for data security and privacy. With a CES solution, the user would have to trust Cisco to handle the data in their cloud infrastructure, and to adhere to the service level agreements and security policies that are agreed upon. Some users may not be comfortable with this level of outsourcing, especially if they have strict data governance or compliance needs¹². NEW QUESTION # 485

An engineer has been tasked with configuring a Cisco FTD to analyze protocol fields and detect anomalies in the traffic from industrial systems. What must be done to meet these requirements?

- A. Modify the access control policy to trust the industrial traffic
- B. Implement pre-filter policies for the CIP preprocessor
- C. Configure intrusion rules for the DNP3 preprocessor
- D. Enable traffic analysis in the Cisco FTD

Answer: C

Explanation:

"configure INTRUSION RULES for DNP3" -> Documentation states, that enabling INTRUSION RULES is mandatory for CIP to work + required preprocessors (in Network Access Policy - NAP) will be enabled automatically:

"If you want the CIP preprocessor rules listed in the following table to generate events, you MUST enable them. See Setting Intrusion Rule States for information on enabling rules."

"If the Modbus, DNP3, or CIP preprocessor is disabled, and you enable and deploy an intrusion rule that requires one of these preprocessors, the system automatically uses the required preprocessor, with its current settings, although the preprocessor remains disabled in the web interface for the corresponding network analysis policy."
